ABSTRACT

Audio description is crossing many borders – both in terms of the scope of its use as well as

1. Introduction

In recent years accessibility for the blind through filmic audio description (AD) has received attention and full recognition of many stakeholders – scholars, policy makers, practitioners, NGOs, cultural institutions, user associations, target audience etc. The concept of accessible culture and inclusive society has been developed in academic theory as well as in broadcasting and distribution practice.

However with AD crossing many borders there are new challenges ahead. One of them are audio describer’s competences. It has long been suggested that a professional profile of audio describers should be created (Jankowska 2015b; Matamala and Orero 2007; Orero 2005; Remael and Vercauteren 2007; Utray, Pereira, and Orero 2009). As for now there is not a systematic and comprehensive description of skills and abilities needed to become a successful audio describer. This gap might soon be filled by the outcomes of the ongoing ADLAB PRO project whose aim is to create a professional profile of the yet little known professional figure (BIBLIO). Unfortunately as for now training in audio description is based on arbitrary assumptions and guidelines.

As noted by Jankowska and Szarkowska (2015) it has often been though that the ability of describing what one sees is the only skill an audio describers needs. And while all audio describers are trained in describing the image many are not trained in intercultural competence. This competence – essential to any translator – seems to be overlooked when it comes to audio describers. As a result audio describers are faced with tasks they are not fit to perform such as creating audio description to films embedded in a culture distant to theirs.

Training audio describers in intercultural competence – as necessary as it is – will solve this problem only partially. While it is perfectly feasible to raise audio describers’ awareness of intercultural issues, it seems impossible to expect an audio describer to gain intercultural competence in all cultures. The same is valid for translators trained to become audio describers. It is highly probable that even if audio describers gained intercultural competence, those who specialize in “smaller cultures” would be scarce

1 http://ec.europa.eu/programmes/erasmus-plus/projects/eplus-project-details-page/?nodeRef=workspace://SpacesStore/fd594781-ccfb-4118-ae90-a15441ab9e9
As such it may differ in some respects from the final published version or inexistent. A possible solution to those cases is to create AD script locally and then translate it into the target language. As Lopez Vera (2006: 9) suggests:

After all, translators are better trained to address cultural references and to adapt them to the target audience. Moreover, an original AD gives the appropriate cultural background and accordingly is more informative than the AD for the same film done from scratch. In this way, translators could avoid a significant loss of necessary cultural references […]

Translation as a new strategy of creating audio description was proposed and investigated by several researchers (Francisco López Vera 2006; Herrador Molina 2006; Jankowska 2015a; Remael and Vercauteren 2010). Despite the initial scepticism (BIBLIO) results of various studies show that it is a feasible, cost and time-cutting strategy that delivers good quality AD, accepted by the target audience (Herrador Molina 2006; Jankowska 2013, 2014a, 2015a). Translating AD from English was also introduced into professional practice by the industry (Benecke 2007 Georgakopoulou, 2009; Denise Kreeger and Shak Yousaf, personal communication, November 2, 2016).

Until now translation of AD scripts was considered exclusively from English into other languages (Francisco López Vera 2006; Georgakopoulou 2009; Herrador Molina 2006; Jankowska 2015a; Remael and Vercauteren 2010) and almost exclusively for English-language films. The reasons behind that are the hegemony of English-language films and quality of audio description. Since AD was relatively new in many countries, experienced or professionally trained audio describers were scarce (Francisco López Vera 2006; Jankowska 2015; Remael and Vercauteren 2010). Translating from English was considered as means of providing good quality AD since audio describers from countries such as the UK or the US were far more experienced than their colleagues from other countries (Francisco López Vera 2006; Georgakopoulou 2009; Herrador Molina 2006; Jankowska 2015b; Remael and Vercauteren 2010).

The accessibility landscape changed. Nowadays there are trained and experienced audio describers in many countries. Bearing that change in mind and the fact that intercultural competence is often not part of AD training this article explores the possibility of translating into English AD scripts created locally for non-English-language films. More specifically – based on a case study of the Polish award-winning film Ida (dir. Pawlikowski, 2013) it aims to get some insight on if and what strategies would needed to be applied in order to render the cultural references from the Polish AD script into English.

2. Intercultural references in audio description

Translation of culture elements also known as cultural references is a topic widely covered in Translation Studies and audiovisual translation. In the area of audiovisual translation Pedersen (2011: 43) calls them Extralinguistic Cultural References (ECR) and defines them as “a reference that is attempted by means of any cultural linguistic expression, which refers to an extralinguistic entity or process”.

Intercultural references are not a central issue in audio description research. This topic was taken up by a limited number of researchers who proposed ECR classification and/or possible strategies of their description (Chmiel and Mazur 2014; Jankowska and Szarkowska 2016; Maszerowska and Mangiron 2014; Szarkowska 2012; Szarkowska and Jankowska 2015; Walczak and Figiel 2013). An overview of the proposed strategies and analysed ECR items/categories is summarized in the Table 1 and Table 2 below.

This is the final draft of the article that was published as Jankowska, A. Milc, M. & Fryer, L. (2017) Translating Audio Description Scripts ...into English. Skase journal of Translation and Interpretation vol 10 no 2 http://www.skase.sk

As such it may differ in some respects from the final published version

Table 1 ECR strategies in AD research

|--------------------------|-------------------------------|-------------------------------|------------------------|-------------------------------|-------------------------------|

Table 2 ECR items/categories in AD research

The classifications presented above were proposed based on a very limited corpus (many of them were exploratory studies based on just one film) thus they are not comprehensive and some inconsistencies might be found. Providing an exhaustive classification of ECRs and of ECR strategies for AD goes beyond this article. However it falls within the scope of the ADDit project whose aim is to research the transfer of Extralinguistic Cultural References in audio description.

When it comes to ECRs in AD translation, the topic was briefly tackled by some of the researchers dealing with this issue. Experiments with this new AD creation strategy showed that dealing with ECRs will be an important part of the process. While some researchers see them as a general translation-related issue that can be solved with translation strategies (Herrador Molina 2006) others see it as a more complex problem. Remael and Vercauteren (2010: 167-169) point out that ECRs are not only general translation crisis points (TCP) but classify them as an important AD translation issue:

With respect to ECRs, the challenge resides in the source text as a pivot translation that the translator can or must double-check with the film, and the differences in cultural distance that might occur between film, audio description and translation. […] The AD translator cannot take the

As such it may differ in some respects from the final published version

Or as Georgakopoulou (2009: 41) sees it:

When translating an AD script from one language to another, extra-linguistic considerations need to be taken into account, such as the audience’s knowledge and expectations. Therefore, culture specific elements may be necessary for description in one culture but not in another. For instance, one of the programs for which we created templated AD scripts featured Greek Orthodox priests, who were described by our US colleagues as “priests dressed in black robes with long beards.” This information was purposely left out in the Greek AD script, as a Greek audience is well familiar with the appearance of Greek Orthodox priests. So, the time allocated to their description could be used more effectively to focus on other information in the program.

Interestingly the issue of ECRs is seen as far more problematic by these researchers (Georgakopoulou 2009; Remael and Vercauteren 2010) who deal with translating English-language AD prepared to non-English-language films. This of course could be explained by pure coincidence. But a more probable hypothesis is that the crisis points encountered during the interlingual translation were at least partially caused by the quality of the intersemiotic translation. To be more precise by the fact that the English-language AD was prepared to films embedded in culture distant to the audio describers. Who might have not been fit to perform the task of intercultural-intersemiotic translation.

3. The study

Our study was conducted on an audio description script prepared for Ida, a film from 2013 directed by Paweł Pawlikowski. The film enjoyed substantial international success. It has won awards including the Oscar for Best Foreign Language Film, the British Academy Film Award, the Goya Award, the European Parliament LUX Prize, the European Film Award, and many more. To-date Ida has been shown in more than a dozen countries including Belgium, France, Italy, Holland, Germany, Norway, Australia, Argentina, the USA, and others (IMDb n.d.). However, Ida with AD has only been available in two countries: in Poland (special screenings organized by NGOs: Fundacja Kultury Bez Barier and Fundacja na Rzecz Rozwoju Audiodeskrypcji “Katarynka”, DVD release, VOD) and Belgium (a special screening with AD during the Brussels Film Festival).

The film tells the story of the title protagonist — Ida, who is a novice in a religious order. The viewer enters her world immediately before she is supposed to take her monastic vows, when she is sent to meet her aunt, Wanda Gruz. The heroine’s relative tells her about her roots, revealing her origin and uncovering her true identity, name, and surname — Ida Lebenstein. The women embark on a journey to places from Ida’s childhood; the journey reveals more information about Wanda herself: her personality and her lifestyle. The plot of Ida is set in the second half of the 20th century in Poland. In effect, the film abounds in ECRs characteristic of the historical period popularly referred to as the PRL [an abbreviation of the official name of the Polish state under the communist rule – Polska Rzeczpospolita Ludowa – the People’s Republic of Poland]. They have come to constitute a part of Polish culture, setting it apart from other cultures, whereas they are so characteristic that their presence in the film cannot go unnoticed for the Polish viewer.

For the purpose of this study we identified those fragments of the Polish AD script that contained ECRs. In total we were able to find 22 examples. The detected ECRs were grouped in categories according to the proposals discussed above, namely: Maszerowska & Mangiron (2014) and Jankowska & Szarkowska (2015 and 2016). Following that we undertook the task of translating selected passages

3 The protagonist has two names — Anna, used among the nuns, and Ida — the real name used by her aunt. Consequently, depending on the context of events, in AD the heroine is referred to interchangeably as Ida or Anna.
As such it may differ in some respects from the final published version into English in order to verify if and what strategies would need to be applied in order to render the ECRs from a Polish AD script in the target language. Translation was carried out by ourselves, consulted with a native speaker of English and finally revised by a professional audio describer from the UK.

In what follows we present and discuss the strategies used to render the ECRs when translating into English an AD script written to a Polish film by a Polish audio describer. The ECRs are marked in bold while the changes made to the translation by the professional audio describer from the UK in italics.

a) Emblems and insignia

The film does not abound in an excess of national symbols, yet they do appear at the moments of crucial significance for the plot. The greatest accumulation of such ECRs is to be found in scenes depicting professional life of Wanda Gruz, the aunt of Ida – the protagonist from the title. Wanda is a judge, which the viewer learns about by watching a court hearing over which she presides.

![Table 3: ECRs related to emblems and insignia](image)

b) Body language and gestures

The ECRs included in the film’s visual layer also extend to gestures and body language. Although Ida is not packed with these types of culturally-charged elements, they constitute an interesting research material and in majority draw upon the strong ties between Polish culture and Christianity. An example from the closing sequence of the film is presented below. Ida is on the verge of taking her monastic vows and she is watching a ceremony in which other novices are participating. They are

praying in a position known as a prostration – which in the Roman-Catholic church implies lying on
the ground with arms stretched to the sides to form the sign of the cross.

<td>In front of an altar, five novices lie face down on the floor. Their arms spread like a cross. They pray.</td>
</tr>
</tbody>
</table>

Table 4 ECRs related to body language and gestures

The Polish AD takes advantage of the fact that the above-mentioned body posture is comprehensible to a person raised in Polish culture which is closely tied with the Roman Catholic church. According to the Central Statistical Office of Poland ( Główny Urząd Statystyczny 2015) as many as 92.8% of Poles declare to belong to the Roman Catholic church. The AD describes the above mentioned posture using a figurative and commonly known idiom ‘leżeć krzyżem’ [literal translation: to lie like a cross]. The idiom simultaneously describes the posture adopted by the nuns while pointing to the gravity of the situation – a prayer in this body position is an expression of deep faith and devotion to God, which is significant in the context of the internal strife Ida is experiencing following the journey she had embarked on with her aunt. Thus, not only do the two words provide the description of the activity, but they also hold its function, symbolism, and meaning. Presumably, it was for this reason that the author of the AD did not think it necessary to enrich the description with additional information, if only to indicate that the novices are in prayer. Rendering this fragment of the AD into English necessitates a different approach. Admittedly, English does use the phrase ‘to lie prostrate’. Yet its application engenders two problems. Firstly, similarly as in Polish, it is a specialist term which is rather unclear for a majority of recipients. Secondly, even if someone understands it, it does not necessarily have to be associated with the position used in the Roman Catholic rite. Prostrations are used in many religions, e.g. Islam, Judaism, Buddhism, Hinduism, etc. They, nevertheless, always signify an exceptionally devout prayer and adopting a posture in which part of the body above the knee touches the ground. It may, however, assume a variety of forms. This is why the English translation uses the strategy of description without naming next to the strategy of explicitation. As to the changes made by a professional UK audio describer – there were no changes made regarding the strategies used to transfer ECRs.

c) Religious symbols

In connection with its plot, Ida abounds in religious symbols. One of such examples to be found in the audio description is the gesture of kissing a medallion Anna (Ida) wears on a chain on her neck. This action serves to express the deep feelings the protagonist has for God, which is also visible in her facial expression when she removes the medallion away from her lips, closing it tightly in her palm. In this case, the very gesture of kissing is not included within the set of ECRs since its significance is universal. What is important in this case is the combination of a gesture with an object of religious cult. The scene where this ECR is visible serves to present Anna’s (Ida’s) character – a deeply devout person whose faith has been put to a difficult test. Before taking the Holy Orders, Ida must face the difficult family past – she is instructed to pay a visit to Wanda Gruz, her only relative.

</tr>
</tbody>
</table>
As such it may differ in some respects from the final published version

[Nighttime. Anna is in bed. She grabs a medallion hanging on her neck. She kisses it.]

### Table 5 ECRs related to religious symbols

The Polish AD uses the strategy of naming. A somewhat blurry object was named ‘medalik’, which in the Polish context unambiguously indicates a small pendant with an image of Jesus Christ or the Virgin Mary. In translating the AD script into English, it is necessary to bear in mind that the English words ‘medallion’ or ‘medal’ themselves have no religious connotations. For this reason, it would be advisable to apply the strategy of explicitation in translation and add the word ‘religious’. Yet, in this specific scene the situation is more complex. In principle the object that Ida kisses is invisible. We do not know if her pendant is a religious medallion or maybe a family keepsake. It is, nonetheless, impossible to exclude the possibility that this is the crux of the matter and the description suggested in the Polish AD is an overinterpretation on part of the author who may have mistaken a religious medallion with medallion or pendant of another type. Eventually, for the reasons presented above, generalisation would be the safest translation strategy. Yet, the word ‘medallion’ does not have such a strictly defined meaning, hence it deprives the description of its unambiguous suggestiveness and opens a substantial field for interpretation. The same possibilities become the share of viewers without sight impairment who see Anna (Ida) shrouded in semidarkness. When it comes to the changes proposed by the UK audio describer – once again – they are of linguistic nature.

**d) Food and drink**

An example of a culturally-charged element from this category of ECRs is a doughnut consumed by Wanda during her countryside outing with Ida. By any appearance, this element should not cause problems while translating the AD since doughnuts are also present in other cultures, especially those where English is a native tongue. However, the problem lies in the fact that in a representative of an American or British culture the word ‘doughnut’ may evoke an entirely different image than what can be seen on the screen.

<table>
<thead>

<td>Wanda wgryza się w pączka.</td>
<td>Wanda eats a <em>filled doughnut</em>.</td>
<td>Wanda eats a <em>jelly doughnut</em>.</td>
</tr>
</tbody>
</table>

*Table 6 ECRs related to food and drink*

This example is a very good illustration of an issue mentioned by Remael and Verecauteren (2010: 168) – ‘AD translator cannot take the verbal source for granted’. In this case relying exclusively on the AD text might lead to an unsatisfactory translation. The *pączek* traditionally consumed in Poland differs in shape from the ‘doughnut’, hence one might try to smuggle a hint on the type of the doughnut Wanda eats into the AD translation by applying the naming strategy which will allow one to take advantage of the fact that the name of the doughnut contains also its description. The translation supplies information on the doughnut’s appearance, pointing to its distinction from the primary image that would be evoked in an English-speaking viewer. Although this particular phrase seemed very easy to translate into English, the final version differs from the one proposed by the AD translators. Although ‘filled doughnut’ is perfectly understandable in the final version we opted for the more natural and more commonly used alternative.

**e) Architecture**

The appearance of places and sites visited by the protagonists is a crucial element introducing the viewer into the world of realities in which the plot of the film was embedded. Although ECRs appearing in this layer of the film constitute a background for the developing action, they must not be ignored since they outline the context and, furthermore, they offer a broader perspective on the image
This is the final draft of the article that was published as Jankowska, A. Milc, M. & Fryer, L. (2017) Translating Audio Description Scripts … into English. Skase journal of Translation and Interpretation vol 10 no 2 http://www.skase.sk

As such it may differ in some respects from the final published version of life in a given time interval. Let us take a look at the scene from Ida and Wanda’s visit to their native village which shows the image of Polish village and the lot of its inhabitants.

<table>
<thead>
<tr>
<th>Polish AD</th>
<th>Proposed English translation</th>
<th>Revised English translation</th>
</tr>
</thead>
</table>

[Table 7 ECRs related to architecture]

Applying the naming strategy, the Polish AD script resorts to the storeroom of the viewer’s knowledge and experience. It is very probable that associations which the AD will evoke in a Polish speaker will be consistent with what can be seen on the screen. However, translating this ECR into English entails a risk that, in an English-speaking viewer, a discrepancy between what appears on the screen and what the viewer will imagine might occur even if a linguistic equivalent in English does exist. There are two ways for describing this ECR. First of them is to combine naming with explicitation, however, with the awareness of a risk this strategy might entail. Another option is to apply combined strategies of naming, explicitation and description which will allow the viewer to form their own image of the element visible on the screen, to subsequently make it more precise thanks to the description provided by AD. In the final version we opted for the combination of the three strategies. No changes were introduced by the professional audio describer from the UK to the proposed AD translation.

f) Costumes

Although the PRL-era fashion abounds in uncountable ECRs which appear exclusively in the visual layer of the film, the subject matter of Ida — numerous scenes playing out within the monastic order, the heroine’s mission, and Wanda’s unusual profession — exclude the possibility of reaching profusely to ECRs pertaining to this sphere of Poles’ life. These are scant, yet they are capable of transmitting a handful of ideas prevalent in Polish fashion of that period. The point in case is scenes which give the viewer a chance to catch a glimpse of Wanda out of her professional environment. In one of such scenes Wanda leaves the court to Ida at a bus station. She is clad in an attire characteristic for the PRL era — on her head she is sporting a headscarf covering most of her hair and ears, clasped with a metal element at the bottom. She is wearing a coat with a fur-trimmed collar, and she is holding a small handbag.

<table>

</tr>
</tbody>
</table>

[Table 8 ECRs related to costumes]

The Polish AD does not overwhelm the viewer with excessive information, applying the strategies of naming and describing. The AD contains no phrases or wording that would suggest to the viewer the fact that Wanda’s attire indicates her social and material status. The financial situation of an average Pole was rather difficult in the times of the People’s Republic of Poland, and so Wanda’s figure stands out against the crowd. However, one might claim that the author of the AD assumes that Wanda’s apparel is sufficiently emblematic so that people with impaired vision will easily decipher it. The same assumption may not be applied to English-speaking viewers. For this reason, the English rendition of
As such it may differ in some respects from the final published version
the AD used the technique of explicitation. Wanda’s financial standing was emphasised with the use
of the world ‘classy’. Additional information on the manner in which the headscarf was fastened was
also included to avoid associations with other ways headscarves are worn outside of Poland. As to the
changes made by a professional audio describer from the UK – they were purely linguistic.

**g) Means of transport**

ECRs to be found in the transport category in *Ida* are not very numerous, besides they have a high
potential to be inscribed in the group of easily recognisable for representatives of other cultures.
Nonetheless, they merit the same measure of attention as the previously described ECRs, as they play
a key role in constructing the overall impression. One specific one, i.e. a Wartburg car owned by
Wanda, frequently appears in various fragments of the film.

<table>
<thead>
<tr>
<th>Polish AD</th>
<th>Proposed English translation</th>
<th>Revised English translation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wanda wsiada do białego Wartburga.</td>
<td>Wanda gets into a Wartburg – a classy white limousine.</td>
<td>Wanda gets into a Wartburg – a classy white limousine.</td>
</tr>
</tbody>
</table>

*Table 9 ECRs related to means of transport*

In the Polish AD, a strategy of naming with description was used. This way the AD makes use of the
car make name and supplements the whole with the vehicle’s colour. The strategy applied in rendering
the AD into English is somewhat different. Next to naming and description, it also utilises
explicitation. In the English translation, not only is Wanda’s automobile a white Wartburg, it also
becomes a classy limousine, which straightforwardly highlights Wanda’s financial status.

This example is also worth drawing attention to from the perspective of the impact that time has on
cultural foreignness. Even in a model situation, i.e. in the case of screening for audience not affected
by impaired vision, not everyone is certain to retrieve the vehicle’s make from their memory – the
main feature of this element is its appearance. It is an elegant limousine not too many individuals
could afford in those times. The Polish AD – addressed to Polish viewers – must take on the challenge
presented by a varied degree of understandability of the subject element depending on the viewer’s
knowledge. It is not said that everyone is sufficiently familiar with motorisation to imagine the form of
the car manufactured in the 1950s based solely on its name. This is why in this case even in Polish
audio-description it is worth considering the use in the case of this ECR of such description strategies
which allow the viewers to form a better picture thereof.

**h) Everyday objects**

The last category to which the ECRs to be found in the film have been allocated covers items used by
the protagonists, although also in this case not all of them could be included in the AD. In the film a
part of them appears in situations which leave no room for their description. Those which appear in the
AD reflect the air and atmosphere of the post-war Poland. One of the more interesting examples is the
scene in which Ida helps prepare a bath. Considering the fact that the convent was short of amenities
such as running water and gas, the women have to heat the water to take a bath.

<td>Using a fire poker, Ida takes off a round iron lid that covers a hole on the top of the stove.</td>
</tr>
</tbody>
</table>

Table 10 ECRs related to everyday objects

The fragment above contains two separate ECRs in the description of which one may detect various strategies. The first ECR to be seen in the fragment given above is a masonry heater. The Polish AD describes it by applying the naming strategy. The Polish AD description is not enriched with explicitation. It does not attempt to explain the characteristic features of such a stove. It is highly probable that the majority of audience will be able to imagine what such a device looks like. In translation into English the same assumptions may be adopted and, consequently, the same strategy. There is one reservation. The example at issue is a perfect illustration of the fact that an AD script is a pivot and the translator dealing with it must consult the original, i.e. the image. In the scene being discussed in reality we do not come across a masonry heater, but a tile cookstove. For this reason, in the final English version we suggest correcting the original to prevent a situation where the viewer forms an untrue image of the item used by the protagonists.

In the same fragment, the AD describes as Ida in order to put more fire or rake the hearth uses a fire poker to lift an element covering an opening allowing to reach the stove interior. In Polish, this part of the cookstove has its own name which was introduced in the AD. Yet, it is a slightly archaic word and it may not be entirely clear to all viewers. This is why the AD contains an explanation of the Polish word ‘fajerka’. Meanwhile, in English the term ‘stove lid’ is in common use. When applied in the AD, it requires no additional explicitation. For this reason in translating the Polish AD into English, the strategy of omitting explicitation was used.

Conclusions

Our study was carried out as a first step of the ADDit! project whose broad aim is to examine the transfer of Extralinguistic Cultural References in audio description. More specifically to define and systematize ECR types and strategies for AD purposes and to explore the possibility of translating AD scripts created locally to non-English-language films into other languages. We are aware of the limited scope of this study therefore we do not attempt to draw any general conclusions but rather present some food for thought and future research.

First of all – our study shows that existing frameworks ECR classification and strategies for AD purposes are insufficient and inconsistent. They do not withstand putting them into practice. We believe that a more extensive corpus study is needed in order to propose a more comprehensive framework.
As such it may differ in some respects from the final published version. When it comes to the changes introduced by the native speaker of English and the UK based professional audio describer – there are two conclusions to be drawn. On the one hand the intercultural competence of the translator performing the task is not to be underestimated – only a translator who is well aware of the both cultures will be able to perform the task of translating and adapting AD scripts from one language and culture to another. This does not exclude further consultations about the choices made. On the other hand whoever performs the task of translating AD scripts should be trained in audio description and more specifically in the local style guidelines. Else the translated script should be revised by a professional audio describer. Although in our case the changes introduced by an English-speaking audio describer were minimal they noticeably improved the quality of the description making it sound more naturally for any English-speaking AD user. It should however be noted that the amount of the introduced changes was smaller since one of the Polish team members is a trained audio describer with knowledge of the UK AD guidelines and was able to correct the script before its final revision by the British audio describer. To give just one example – the most commonly corrected issue was the use of present continuous instead of present tense.

Finally – as limited as it is in scope – our analysis demonstrates that translating into English AD scripts created locally to non-English-language films could be an option. Its main advantages being that of preventing a significant of cultural loss. Given the results of previous studies that show that AD translation strategy is less time-consuming and accepted by the target audience (Herrador Molina 2006; Jankowska 2013, 2014b, 2015a), translation of AD scripts into English could be a feasible alternative to the current workflow. It is however evident – just as Remael and Verecauteren (2010) notice – that AD script translation cannot be done in isolation from the original that is being translated, that is the image. Thus AD script translation will never be a ‘simple’ task of translating written text.
