From information literacy to digital scholarship: challenges and opportunities for librarians

ARLG: Digital Literacy – librarians, staff and students – where are we now?
Newcastle University 20th Feb 2015

Dr Charles Inskip
c.inskip@ucl.ac.uk
Context

- This presentation discusses some of the findings of research funded by SCONUL through their participation in the JISC Developing Digital Literacies programme.

- It is part of a wider project, Research Information Literacy and Digital Scholarship (RILADS) which was funded by Research Information Network (RIN) and SCONUL.

- Some of the views are mine.
Overview on evolving digital literacy competencies

• What do we mean by ‘digital literacies’
• Research context
• Survey findings and discussion
• Useful resources
What do we mean by ‘digital literacies’?

- digital literacy defines those capabilities which fit an individual for living, learning and working in a digital society

(JISC, 2011)
The seven elements of digital literacies

- **Media literacy**
  Critically read and creatively produce academic and professional communications in a range of media.

- **Information literacy**
  Find, interpret, evaluate, manage and share information.

- **Digital scholarship**
  Participate in emerging academic, professional and research practices that depend on digital systems.

- **Communications and collaboration**
  Participate in digital networks for learning and research.

- **Career & identity management**
  Manage digital reputation and online identity.

- **Learning skills**
  Study and learn effectively in technology-rich environments, formal and informal.

- **ICT literacy**
  Adopt, adapt and use digital devices, applications and services.

(JISC, 2014)
Information literacy

- Information literacy: the ability to find, interpret, evaluate, manipulate, share and record information, especially scholarly and educational information. For example, dealing with issues of authority, reliability, provenance, citation and relevance in digitised scholarly resources.

(JISC, 2011)
Digital scholarship

- digital scholarship: the ability to participate in emerging academic, professional and research practices that depend on digital systems. For example, use of digital content (including digitised collections of primary and secondary material as well as open content) in teaching, learning and research, use of virtual learning and research environments, use of emergent technologies in research contexts, open publication and the awareness of issues around content discovery, authority, reliability, provenance, licence restrictions, adaption/repurposing and assessment of sources.

Orme (2008)

RLUK Re-skilling for research

Significant skills gaps

1. Ability to advise on preserving research outputs
2. Knowledge to advise on data management and curation
3. Sufficient knowledge to support compliance with the various mandates of funders, including open access requirements
4. Knowledge to advise on potential data manipulation tools
5. Knowledge to advise on data mining
6. Knowledge to advocate, and advise on, the use of metadata
7. Ability to advise on the preservation of project records
8. Knowledge of sources of research funding to assist researchers to identify potential funders
9. Skills to develop metadata schema and advise on standards

(Brewerton, 2012)
Digital scholarship

- **Infrastructure and policy:**
  - “The fundamental point is that changes in scholarly practice writ large—and that includes changes not just in the practices of doing research but also in teaching and learning in higher education—are going to shape the future of the research library.” (Lynch, 2012)

- **Service provision:**
  - “high performance computing; geographic information systems; quantitative and qualitative data analysis; data finding and management; the digitization, creation, manipulation, storage, and sharing of media content; repository services; digital preservation; streaming media platforms; digital journal publishing; online collaboration; and intellectual property consultation.” (Vinopal & McCormick, 2013)
Digital scholarship

• Tooling up
  – Copyright, contracts, media, publishing, finances, technology, data management and curation, managing repositories (Bonn, 2014)

• Scholarly communication:
  – “copyright and fair use, author’s rights, open access, citation metrics … publishing options, digital preservation, and institutional repository development and management” (ACRL 2013: 13)
  – Information fluency
Growth in digital scholarship centres

- “Planning digital projects
- Using specialized software and tools
- Developing metadata
- Understanding relevant standards
- Addressing intellectual property concerns
- Planning for long-term preservation
- Digitizing analog materials
- Considering options for presenting or publishing completed projects”

(Lippincott, Hemmasi & Lewis, 2014)

(Inskip, 2013)
Baseline survey

• As part of its involvement in the JISC Developing Digital Literacies (DDL) programme (JISC, 2013), SCONUL took a survey of members to identify areas of interest around developing staff digital scholarship competences.
• The survey was designed and administered by a small group of information professionals (Sara Marsh (University of Bradford); Alison Mackenzie (Edge Hill University) and representatives from the SCONUL Working group on Information Literacy, Cathie Jackson (Cardiff); Helen Howard (Leeds)), with direction, contributions and feedback from the SCONUL Executive Board (Mackenzie, 2012).
Six key literacies

• The opening section of the survey identified six key literacies (JISC, 2011):
  – ICT / computer literacy,
  – information literacy,
  – media literacy,
  – communication and collaboration,
  – digital scholarship
  – learning skills.

• Participants were asked for their assessment of the digital capabilities of staff whose core roles were in the areas of student support and academic liaison.
Information literacy

Staff expertise

- Expert: 79.2%
- Competence: 20.8%
- Novice: 0.00%
- N/A: 0.00%

Importance of staff developing expertise in this area

- Essential: 91.7%
- Not a current priority: 4.2%
- Maybe in the future: 2.1%
- Not required: 2.1%

(Mackenzie, 2012)
Information literacy

“traditional library function”
“some staff are experts, however, there is a lack of consistency of expertise”
“to develop skills as the information landscape changes”
“keeping up to date with best practice”
“staff are expert but some are probably at novice so there is currently quite a mix”
“continuous development is essential”
Digital scholarship

Staff expertise

- Expert: 43.8%
- Competent: 8.3%
- Novice: 47.9%
- N/A: 0.0%

Importance of staff developing expertise in this area

- Essential: 77.1%
- Not a current priority: 12.5%
- Maybe in the future: 0.0%
- Not required: 10.4%

(Mackenzie, 2012)
Digital scholarship

“an area of growing importance for us”
“not well understood or relevant to some student support”
“emerging field but important to develop especially for staff support”
“pockets of good practice in the service”
“in the core roles with student support and academic liaison. Some knowledge sharing is needed”
“librarians and learning technologists have an expert awareness”
“[may not] have all the tools required to repurpose digital material”
Findings

• Need for library and information professionals to develop their digital scholarship skills
• Recognised by established frameworks and supported by our research
• Importance of teaching, research and technical skills in developing IL and DS resources
• Multiple staff development resources available via JISC DDL projects and associations
Supporting development within service

- Internal training, workshops
- Appraisals
- Provision of resources to staff (eg iPads)
- Facilitation of CPD through funding
- Training supported by strategy
- Enabling networking

(SCONUL, 2013)
Workforce development

- Good practice examples
- Teachmeets
- Local / regional collaborative projects
- Staff need confidence (and some need convincing)
Strategic development of institutional digital literacies

- Representation at committee level
- Library strategic plan
- Cross-service working groups
- Ad hoc relationship with other service areas
- Embedded within University Learning and Teaching strategy
- Credit-bearing module embedded in curriculum
- Personal contacts
- Liaison
- Not always seen as a priority within the organisation

(SCONUL, 2013a)
Key issues

- Policy, strategic development and organizational change,
- Networks and collaborations,
- Good practice case studies and
- Continuing professional development frameworks

Lots of examples here: http://www.slideshare.net/infolit_group/mapping-resources-to-competences-charles-inskip

(Inskip, 2014)
Useful resources

Developing digital literacies

Digital literacies are those capabilities which fit an individual for living, learning and working in a digital society.

Digital literacy looks beyond functional IT skills to describe a richer set of digital behaviours, practices and identities. What it means to be digitally literate changes over time and across contexts, so digital literacies are essentially a set of academic and professional situated practices supported by diverse and changing technologies. This definition quoted above can be used as a starting point to explore what key digital literacies are in a particular context e.g. university, college, service, department, subject area or professional environment.

Digital literacies encompasses a range of other capabilities represented here in a seven elements model:

- Media literacy: Critically read and creatively produce academic and professional communications in a range of media
- Information literacy: Find, interpret, evaluate, manage and share information
- Digital scholarship
- Communications and collaboration: Participate in digital networks for learning and research
- Career & identity management

http://www.jiscinfonet.ac.uk/infokits/digital-literacies/
Mapping Resources to Competencies: a quick guide to the JISC Developing Digital Literacies resources.

1. Introduction

SCONUL has been working as a participating professional association in the JISC Developing Digital Literacies (DDL) programme, which ran from July 2011 to December 2013. During this process SCONUL drew upon the considerable expert advice available within its community, and worked in close collaboration with peer organisations and specific project outputs to explore new approaches to embedding digital literacy in working practices.

A baseline survey of SCONUL members raised key questions relating to bridging the gap in staff competences, identifying examples of good practice, the use of the digital literacy lens as a staff and student development tool, and opportunities for SCONUL to champion or lead on digital literacy. We looked closely at the outputs of the JISC DDL programme and themed and analysed them according to these key questions. This report offers some ideas for those faced with the challenge of developing these literacies, whether at a managerial or personal level. We have sign-posted resources around policy and strategic change management recognising the importance of collaborative conversations within and across institutions. It is important that the ownership of digital literacies is shared across and amongst institutions and services and is not the purview of one stakeholder. This report serves as a starting point for readers to identify resources for the development of their staff, service and institution’s digital literacies and capabilities.

2. Context

As digital technology permeates every aspect of our lives, SCONUL has an obligation to reflect this in supporting its membership in the delivery of efficient, relevant and forward thinking services. Informed by ongoing debates on graduate skills and employability, research training, digital library developments and learning and teaching using digital environments, SCONUL takes a lead role in supporting information professionals to deliver innovative information literacy teaching within HE institutions, and to contextualise this within institutional learning and teaching strategies (such as the Seven Pillars model). SCONUL also has direct influence on the digital research environment and on the information seeking behaviour of researchers.

In order to assess and benchmark the effectiveness of its own digital presence, its members’ digital literacies and to propose changes to professional development where appropriate, SCONUL has been working as a participating professional association in the JISC Developing Digital Literacies programme, which ran from July 2011 to December 2013. During this process SCONUL has drawn upon the considerable expert advice available within its community, and worked in close collaboration with peer organisations and specific project outputs to explore new approaches to embedding digital literacy in working practices.
Research Information Literacy and Digital Scholarship

This project aims to deliver a small number of key outputs contributing to a wider investigation into the support available to students, staff and researchers to enhance digital literacy. There are two strands to the project. One is co-ordinated by Research Information Network (RIN) on behalf of Research Information and Digital Literacies Coalition (RILDs), the other by SCONUL under the JISC Developing Digital Literacies (DDL) programme.

The RIN strand focuses on the identification and promotion of good practice in information handling and data management training and development across the HE and research sectors. Its aim is to identify a representative sample of case studies to illustrate information and data management training in Higher Education (including those already documented in earlier research). The scope of these case studies will relate specifically to HE researchers from postgraduate students to senior researchers (including supervisors).

The SCONUL strand aims to identify, harvest, and use materials to progress the development of digital professional expertise. To ensure that both strands retain clear foci, while minimising duplication of effort, the emphasis for the RILDs programme will be on the identification and promotion of good practice in information literacy in HE, and, for the SCONUL/JISC funded activity, on enhancing the digital scholarship skills of information professionals, using the SCONUL baseline survey definition: “Digital scholarship: the ability to participate in emerging academic, professional and research practices that depend on digital systems. For example, use of digital content (including digitised collections of primary and secondary material as well as open content) in teaching, learning and research, use of virtual learning and research environments, use of emergent technologies in research contexts, open publication and the awareness of issues around content discovery, authority, reliability, provenance, licence restrictions, adaption/repurposing and assessment of sources.” It is anticipated that the SCONUL strand will identify gaps in provision and efforts will be made to make proposals on how these might best be filled. These proposals will be targeted towards SCONUL members and other information professional stakeholders in an effort to guide them in developing and maintaining services and resources which enable digital scholarship.

APRIL 22, 2014

Presentation at LILAC 2014

I look forward to presenting findings of the Mapping Resources to Competences report (on Friday morning at 0945) at this week’s LILAC 2014 (Librarians’ Information Literacy Annual Conference) in Sheffield, UK. Slides will be made available through the conference’s Slideshare account (http://www.slideshare.net/infolit_group) and will also be uploaded to this blog.

What do we need to do

- Strategic support
- Self-directed
- Useful resources
- Internal training
- Attending events (eg conferences)
- Professional association input
- Liaison
Acknowledgements

• The research could not have taken place without the detailed contributions of the participants, who generously shared their time and their experiences.

• The survey was designed and administered by a small group of information professionals (Sara Marsh (University of Bradford); Alison Mackenzie (Edge Hill University) and representatives from the SCONUL Working group on Information Literacy, Cathie Jackson (Cardiff); Helen Howard (Leeds)), with direction, contributions and feedback from the SCONUL Executive Board.

• This work was funded by SCONUL through their participation in the JISC Developing Digital Literacies programme

• It is part of a wider project, Research Information Literacy and Digital Scholarship (RILADS) which was funded by Research Information Network (RIN) and SCONUL.

• The opinions expressed in this presentation and associated outputs are those of the author and may differ from SCONUL, RIN or UCL policy
