Figure 2: Sensitivities of cumulative CO₂ emissions to scenario factors. Changes refer to cumulative CO₂ FFI values in the period 2010-2050 when moving from SSP2 to either SSP1 (a) or SSP3 (b) without climate policies. TOTAL refers to total emission changes, and the rows below show emission changes for each of the five factors. Individual effects are reported with transparent thicker bars, total effects with solid thinner bars and interaction effects with striped bars. Values are reported for each of the 6 IAMs involved in the study.
