Why is pollution control important in museums?

Examples of pollution damage
Past history and trends in external pollutants

What object materials are in the collection?

What concentrations is it permissible to expose objects to?

List of object materials

Thresholds and standards

Pollutants that affect these materials

Establish
1. The main vulnerable materials
2. The main damaging pollutants

IMPACT CALCULATION MODEL

External pollution

Ventilation rates

Pollutant concentrations are likely in my rooms?

Do I need to control pollution in my building?

Pollution control techniques available

Case studies and exemplar buildings

How to test the impact of different control strategies

Cost-benefit analysis

Background information on pollution

Pollution damage to objects

Pollution concentrations in buildings

Pollution control strategies and case studies
