

Table 1. Characteristics of masseter muscle responses to clicks of 138 dB SPL intensity, recorded in 62 subjects (aged ≤ 55 years) in the mandibular and zygomatic electrode configurations.

MM parameters	Mandibular Montage					Zygomatic Montage					Mand vs Zyg (Unilateral)* <i>p</i>	Mand Vs Zyg (Bilateral) <i>p</i>
	Unilateral		Ipsi vs Contra <i>p</i>	Bilateral	Uni* vs Bil <i>p</i>	Unilateral		Ipsi vs Contra <i>p</i>	Bilateral	Uni vs Bil <i>p</i>		
	Ipsilateral MM	Contralateral MM		Ipsi and Contra MM		Ipsilateral muscle	Contralateral muscle		Ipsi and Contra MM			
Frequency (ears)	98/124 (79.0%)	100/124 (80.6%)	<i>ns</i>	100/124 (80.6%)	<i>ns</i>	120/124 (96.8%)	120/124 (96.8%)	<i>ns</i>	124/124 (100%)	<i>ns</i>	<0.0001	<0.0001

p11 corrected amplitude asymmetry	17.91±13.55			16.96±14.06	<i>ns</i>	14.56±11.8			13.27±11.65	<i>ns</i>	<i>ns</i>	<i>ns</i>

MM = masseter muscle; Unilateral and Uni = unilateral stimulation; Bilateral and Bil = bilateral stimulation; Ipsi = Ipsilateral; Contra = contralateral; Zygomatic and Zyg = zygomatic electrode montage; Mandibular and Mand = mandibular electrode montage; *ipsi- and contralateral responses pooled; *p* = *p* value, *ns* = non-significant; Statistics: chi-squared test for comparisons between frequencies; Mann-Whitney U-test for comparison between means.
