[^0]Table 2. Hazard Ratios and 95\% CIs for All-cause Mortality by Cardiorespiratory Fitness Level and Sex ${ }^{\text {a }}$

|  | Mortality |  | Hazard Ratio (95\% CI) |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | No./Total No. | Weighted death (\%) | Baseline model ${ }^{\text {b }}$ | Multivariable model ${ }^{\text {c }}$ | Multivariable model ${ }^{\text {d }}$ |
| All |  |  |  |  |  |
| High | 46/1593 | 505,322 (1.7) | 1 [Reference] | 1 [Reference] | 1 [Reference] |
| Moderate | 35/1110 | 488,384 (2.4) | 1.39 (0.70 to 2.79) | 1.41 (0.70 to 2.80) | 1.35 (0.67 to 2.71) |
| Low | 23/539 | 333,102 (3.6) | 2.15 (1.13 to 4.09) | 2.33 (1.23 to 4.41) | 2.26 (1.10 to 4.64) |
| $P$ for trend |  |  | . 026 | . 016 | . 036 |
| Men |  |  |  |  |  |
| High | 34/863 | 399,945 (2.5) | 1 [Reference] | 1 [Reference] | 1 [Reference] |
| Moderate | 23/598 | 318,886 (2.9) | 1.13 (0.52 to 2.44) | 1.11 (0.53 to 2.33) | 1.11 (0.50 to 2.46) |
| Low | 14/246 | 261,453 (6.0) | 2.27 (1.06 to 4.87) | 2.50 (1.18 to 5.28) | 2.72 (1.10 to 6.74) |
| $P$ for trend |  |  | . 071 | . 048 | . 076 |
| Women |  |  |  |  |  |
| High | 12/730 | 105,377 (0.8) | 1 [Reference] | 1 [Reference] | 1 [Reference] |
| Moderate | 12/512 | 169,497 (1.8) | 2.49 (0.87 to 7.08) | 2.52 (0.88 to 7.22) | 2.57 (0.86 to 7.74) |
| Low | 9/293 | 71,649 (1.5) | 2.08 (0.86 to 5.06) | 1.89 (0.69 to 5.15) | 1.55 (0.56 to 4.26) |
| $P$ for trend |  |  | . 030 | . 086 | . 181 |

${ }^{\text {a }}$ Low cardiorespiratory fitness is defined as an estimated VO2max below the 20th percentile of the ACLS data of the same gender and age group; moderate cardiorespiratory fitness is defined as a value between the 20th and 59th percentile, and high cardiorespiratory fitness is defined as at or above the 60th percentile.
${ }^{\mathrm{b}}$ Adjusted for age, gender (overall only), and race/ethnicity.
${ }^{\text {c }}$ Additionally adjusted for smoking status, alcohol intake, total energy intake
${ }^{\mathrm{d}}$ Additionally adjusted for sedentary behavior, physical activity, hypertension, diabetes, and hypercholesterolemia

[^0]:    ${ }^{\text {a }}$ All estimates were weighted to be nationally representative.
    ${ }^{\mathrm{b}}$ Low cardiorespiratory fitness is defined as an estimated $\mathrm{VO}_{2 \text { max }}$ below the 20th percentile of the Aerobics Center Longitudinal Study (ACLS) data of the same sex and age group; moderate cardiorespiratory fitness is defined as a value between the 20th and 59th percentile, and high cardiorespiratory fitness is defined as at or above the 60th percentile.
    ${ }^{\text {c }}$ Physical active was defined as engaging in moderate or vigorous recreational physical activity over the past 30 days
    ${ }^{\mathrm{d}}$ Sedentary was defined as TV watching or PC use $>2 \mathrm{~h} / \mathrm{d}$ outside of work.
