Title: Taxonomies for chronic visceral pain  
ID: PAIN-D-19-00563R1

Dear Dr Keefe,

We thank the reviewer for her/ his comments. Please see our point-by-point reply below. The revisions in the manuscript are marked with the track change function of WORD.

Sincerely

Winfried Häuser

Ursula Wesselmann

Reviewer #2: The authors have addressed some of the reviewer comments, but not all:

1. Composition of EAU guideline committee was not clarified in the MS.

Reply: The composition of the EAU guideline committee has been detailed in table 1. „Multidisciplinary and multispeciality group with clinical and research experience“. In detail: The EAU guideline committee was composed of the following disciplines (number of representatives): urology (4), pain medicine (2), gynecology (1), gastroenterology (1), pelvic floor physiotherapy (1), psychology (1), sexology (1).

2. The methods reports from ref 1 and 25 were not included in Table 1.

Reply: We have added the methods reports from 25 in Table 1 in this second revision: „Group consensus; guidelines for classification in overlapping fields were specified“. We assume that the reviewer refers to reference 3 (Aziz et al.). We checked the paper again and found no reports on the methods used to develop this classification.

3. The erroneous statement on coding of chronic pancreatitis was not revised. The authors seem to think that ICD-11 allows only one diagnosis per patient. This is explicitly not the case, and a combination of codes may well fulfill the stated needs. So the authors should give it a try.

Reply: We are aware that ICD-11 allows several diagnoses per patient. However, to our best knowledge it does not allow to code more than one mechanism for a given pain syndrome, and we have changed the paragraph in the review to reflect this more clearly.

The revised MS was submitted with changes tracked in WORD; that is nice within WORD, but terrible when converted to a PDF, when there are many changes. For this reason I found it impossible to review the modified Tables 1 and 2. The author response sounds promising, but I could not verify the statements. I suggest resubmitting tables with all changes shown in addition to a clean (i.e. no track changes) set of tables with next requested revision.

Reply: We have submitted a clean copy of the revised tables.

## 1. Background

1 In the past, pain associated with the viscera has typically been considered as a  
2 symptom of visceral disease. It is only more recently that the medical specialties of  
3 gynecology, gastroenterology and urology have recognized that visceral pain can be  
4 a pain syndrome in its own right. As visceral pain has been recognized as a chronic  
5 pain syndrome, which often occurs as a co-morbid condition together with other  
6 chronic pain syndromes [5,23,27], several medical and scientific associations have  
7 developed taxonomies for specific visceral pain conditions.  
8

9 Taxonomies in general are defined as hierarchical arrangements of terms that  
10 describe a particular branch of science or field of knowledge. Ideally, terms are  
11 selected and arranged to be mutually exclusive, thus creating an ordered universe  
12 with a place for everything and everything in its place. However, medicine does not  
13 lend itself well to such pure rationalism [20]. The open conceptual question remains  
14 whether taxonomies should use a 'lumping' or 'splitting' approach. Specifically the  
15 question has been raised if different diagnostic manifestations of a basic pathological  
16 process have been divided into multiple diagnostic silos by taxonomies, creating  
17 artifactual comorbidity in certain circumstances [15].

## 35 2. Scope of the review

36 The scope of this Topical Review is to highlight the strengths and limitations of  
37 different taxonomies for visceral pain and to initiate collaborations between  
38 the different scientific associations, who have developed different classification  
39 systems. Ultimately, a unified and evidenced-based pain classification system will  
40 have to be widely adopted by patients and both the clinical and the research  
41 communities, as well as regulatory agencies and pharmaceutical companies to  
42 advance diagnosis, clinical pain management, clinical trial design and pain research  
43 in the field of visceral pain.

50  
51  
52  
53

## 54 3. Methods

55 We searched PubMed and GoogleScholar with the terms „taxonomy“, „chronic  
56 visceral pain“ and „chronic abdominal pain“. We included overarching taxonomies for  
57  
58  
59  
60  
61  
62  
63  
64  
65

1 chronic visceral pain syndromes and excluded taxonomies for single diseases such  
2 as chronic pancreatitis. We included taxonomies developed by international and  
3 interdisciplinary working groups and excluded taxonomies from national and / or  
4 monodisciplinary committees.  
5  
6  
7

#### 8 **4. Results (alphabetical order) (for details see tables 1 and 2)**

##### 9 **4.1 European Association of Urology (EAU)**

10  
11  
12  
13  
14  
15  
16  
17  
18 In 2004 the multidisciplinary guideline panel of the EAU guideline on Chronic Pelvic  
19 Pain built the concept of Chronic Pelvic Pain Syndromes (CPPS), which is now  
20 referred to as “pain as a disease process” [11]. In 2013 they published an article  
21 illustrating the paradigms in the new approach of chronic pelvic pain [CPP] [9]. The  
22 terminology of the EAU guideline has always been in close relationship with the  
23 taxonomy of the IASP SIG visceral pain Taxonomy (see below 4.4.), most recently  
24 published in 2012 [16].  
25

26  
27  
28  
29  
30  
31 The dichotomy between pain as a symptom of a well known disease and pain as a  
32 disease in its own rights has been the basis. In 2016, the guideline was rewritten in  
33 such a way that it is centred around pain instead of being organ-centered [10]. CPP  
34 may be sub-divided into conditions with well-defined classical pathology named  
35 „specific disease-associated pelvic pain” and those with no obvious pathology named  
36 “chronic pelvic pain syndrome”. CPPS is seen as a subdivision of CPP.  
37  
38

##### 42 **4.2 International Continence Society (ICS)**

43  
44  
45  
46  
47  
48  
49  
50  
51  
52 The ICS published in 2016 a standard for terminology in CPSS. It was written by the  
53 Chronic Pelvic Pain Working group [7]. Its aims are to: 1. describe the nine clinical  
54 domains involved in CPPS; 2. define terminology; 3. develop an evaluation guideline  
55 for each domain; 4. establish a process for evolving terminology in response to  
56 scientific and clinical development and patient need.

In this document there is a mix of definitions and descriptions of terms, clinical situations, signs and symptoms and evaluation aspects.

### 4.3 IASP - ICD 11 Taxonomy

In 2012, IASP contacted the WHO with respect to developing a new and pragmatic classification of chronic pain for the upcoming 11th revision of the ICD. The ICD-11 development process requires the generation of content models for each diagnostic entity, which contain definitions, diagnostic criteria, and synonyms as well as state of the art scientific information about the respective entity. The goal of the IASP-ICD-11 task force was to create a classification system that is applicable in clinical settings for specialised pain management and in primary care [24].

A diagnosis of chronic primary visceral pain should be given if the chronic pain condition is considered to have a multifactorial etiology and is believed to be associated with the internal organs for which no underlying pathology/cause can be identified, and hence, symptoms are not better explained by any of the other chronic visceral pain diagnoses in the secondary domain. These syndromes are summarized under chronic primary visceral pain: Chronic primary chest pain syndrome, chronic primary epigastric pain syndrome, irritable bowel syndrome, chronic primary abdominal pain syndrome, chronic primary bladder pain syndrome, chronic primary pelvic pain syndrome, chronic pelvic pain in females, chronic pelvic pain in males [21].

Chronic secondary visceral pain is persistent or recurrent pain originating from internal organs of the head or neck region or of the thoracic, abdominal, and pelvic cavities. Three main mechanisms may account for chronic secondary visceral pain, and they also structure the classification of chronic secondary visceral pain: 1. persistent inflammation; 2. vascular mechanisms; 3. mechanical factors. At every level of the classification, the WHO adds residual categories “other specified” and “unspecified.” The category “other” is used for specific diagnoses that fall in the same category but are not represented individually. On this level of the classification of chronic visceral pain, the category “other chronic secondary visceral pain” would be the umbrella term for chronic secondary visceral pain diagnoses that are due to neither persistent inflammation, vascular mechanisms, nor mechanical factors.

Within each of the three the subdivisions are structured anatomically into four areas: head or neck region; thoracic region; abdominal region; pelvic region [3].

#### **4.4 Pain of Urogenital Origin Special Interest Group (SIG) of IASP (PUGO)**

1 PUGO is the acronym for the SIG of IASP that represents those involved in the  
2 clinical management and research of abdominal and pelvic pain. PUGO was founded  
3 in 1998 and later renamed SIG on Abdominal and Pelvic Pain. In 2004 a working  
4 group was set up by PUGO members to look at the taxonomy, classification and  
5 terminology for pain perceived in the pelvis. Their recommendations were  
6 incorporated in 2012 into the IASP Classification of Chronic Pain, Second Edition  
7 (Revised) that had been updated in 2011 by the IASP Terminology Working Group  
8 with the main emphasis on pelvic pain being a condition in its own right in many  
9 circumstances. We refer to this terminology here as the 2012 IASP SIG visceral pain  
10 taxonomy [16]. The terminology of „pain syndrome“ was a key innovation on the  
11 pathway to accepting that many pelvic pain conditions are primary pain conditions  
12 and are often associated with bladder, bowel and systemic changes as well as  
13 psychological, behavioural and sexual connotations.

#### **4.5 Rome Foundation**

27 The Rome Foundation is an independent not-for-profit organization that provides  
28 support for activities designed to create scientific data and educational information to  
29 assist in the diagnosis and treatment of functional gastrointestinal disorders (FGID).  
30 The Advisory Council consists of representatives of all Rome Foundation sponsors,  
31 Rome Board members, the American Gastroenterological Association the  
32 International Foundation for Functional Gastrointestinal Disorders and  
33 representatives of interested scientific and regulatory agencies.  
34  
35  
36  
37  
38  
39  
40  
41

42 The Rome Foundation has its origins in the late 1980s, where an expert group,  
43 produced the first diagnostic criteria for irritable bowel syndrome. Diagnostic criteria  
44 for an increasing number of FGID were produced by a growing number of experts  
45 (Rome I in 1994, Rome II in 1999/2000, Rome III in 2006, Rome IV in 2016) [8]. The  
46 Rome symptom-based categoric criteria are of particular value for clinical research  
47 and pharmaceutical trials. They provide a clear strategy for selecting study subjects,  
48 they are endorsed by regulatory agencies, and are used by clinical investigators and  
49 industry for clinical trials around the world.  
50  
51  
52  
53  
54  
55  
56

57 The definition of FGIDs changed with Rome III from the prior absence of structural  
58 disease to disorders of gut-brain interaction. The Rome IV criteria of FGID include 33  
59  
60  
61  
62  
63  
64  
65

1 adult and 20 pediatric FGIDs. The classification of the disorders into anatomic  
2 regions (ie, esophageal, gastroduodenal, bowel, biliary, and anorectal) presumes  
3 unifying features underlying diagnosis and management that relate to these organ  
4 locations. The classification of FGIDs is based primarily on symptoms rather than  
5 physiological criteria. This has been favored because of its utility in clinical care,  
6 limited evidence that physiological disturbance (ie, motility) fully explained patient  
7 symptoms, and the fact that symptoms are what bring patients to health care  
8 providers.  
9

#### 10 11 12 **4.6 Mental health care groups**

13 It is estimated, that about 50% of somatic symptoms including abdominal pain  
14 presented in primary care, cannot be explained by a defined somatic disease. These  
15 symptoms are labelled „medically unexplained somatic symptoms“ in family  
16 medicine. In general medicine and partially in psychosomatic medicine, the terms  
17 „functional disorders“ or „functional somatic syndromes“ are used, too. These terms  
18 have been applied to several related syndromes characterized more by defined  
19 symptoms, suffering, and disability than by consistently demonstrable tissue  
20 abnormality such as IBS. The term does not assume psychogenesis but only a  
21 disturbance in bodily functioning [26]. In addition, some chronic pain syndromes were  
22 coded by mental health care specialists in the ICD-10 as somatoform pain disorder if  
23 the predominant complaint is of persistent, severe, and distressing pain, which  
24 cannot be explained fully by a physiological process or a physical disorder, and  
25 which occurs in association with emotional conflicts or psychosocial problems that  
26 are sufficient to allow the conclusion that they are the main causative influences.  
27 The debates on the underlying concept of somatization and the uncertainties about  
28 excluding a physiological process or a physical disorder which fully explains the pain,  
29 led to the decision of mental health care associations, to delete the category  
30 „somatoform pain disorder“, e.g. in the ICD-11 and in the Diagnostic and Statistical  
31 Manual of Psychiatric 5th edition diseases of the American Psychiatric Association  
32 [2,14]. However, there are substantial differences between the different new  
33 taxonomies (see table 3).

#### 53 54 55 **5. Discussion**

56 The IASP - ICD 11 Taxonomy entails the most comprehensive classification system  
57 covering all visceral pain locations. IASP's pretention to account the already widely  
58  
59  
60  
61  
62  
63  
64  
65

1 established taxonomies for the chronic visceral pain syndromes such as the ROME  
2 criteria for primary visceral pain syndromes as well as criteria for interstitial cystitis  
3 and bladder pain syndromes can partially be confirmed. The IASP - ICD 11  
4 classification comprises only a minority – yet the most prevalent – functional  
5 gastrointestinal disorders with the major symptom pain.  
6

7 Some issues of the IASP - ICD 11 classification need further discussion:

8  
9 a) A critical limitation of the IASP - ICD 11 taxonomy for clinical practice and research  
10 as well as for epidemiological studies is the concept to classify visceral pain based  
11 on the 'major pathophysiological mechanisms', since in the majority of chronic  
12 visceral pain syndromes these pathophysiological mechanisms have actually not  
13 been identified yet. For these diseases, the code „unspecified“ would have to be  
14 used according to the new IASP - ICD 11 taxonomy. A classification of visceral pain  
15 related to organ (systems) as proposed by the previous 2012 IASP SIG visceral pain  
16 taxonomy [16] seems to be more useful for classification and coding in clinical  
17 practice at this time.  
18

19  
20 b) Multiple pathophysiological mechanisms may play a role in the development and  
21 persistence of a visceral pain syndrome (e.g. mechanical factors and persistent  
22 inflammation in a duodenal stenosis by Crohn's disease). However, there is no  
23 possibility to code more than one mechanism for a given pain syndrome. In addition,  
24 some other pain mechanisms in chronic visceral pain are not covered by the new  
25 IASP – ICD 11 proposal such as neuropathic pain mechanisms and neuroplastic  
26 changes in the central pain pathways in chronic pancreatitis [22]. These mechanisms  
27 have to be coded as „other specified“ according to the IASP - ICD 11 taxonomy.  
28 Because of the uncertainties mentioned above, 2nd level diagnoses will be a  
29 challenge to use in a consistent manner even by specialists in chronic abdominal  
30 pain.  
31

32  
33 c) The challenge from a clinical perspective is, that this separation into primary and  
34 secondary pain is not straightforward for chronic visceral pain conditions, since many  
35 chronic visceral pain conditions share a poorly defined pathophysiology, and the  
36 correlation between the underlying disease and the pain complaint is unclear. In  
37 several cases 'organic pathologies' that were initially thought to be correlated to the  
38 pain complaint, have been found to be a spurious finding, and are no longer required  
39 for the taxonomy of the chronic pain condition. An example are glomerulations in  
40 interstitial cystitis [28]. In contrast, abdominal pain due to peptic ulcers and chronic  
41  
42  
43  
44  
45  
46  
47  
48  
49  
50  
51  
52  
53  
54  
55  
56  
57  
58  
59  
60  
61  
62  
63  
64  
65

1 gastritis, which has been considered a psychosomatic disease in the past, has been  
2 linked to Helicobacter Pylori infections and can be successfully treated with  
3 appropriate antibiotics in a subgroup of patients. However, the brain-gut axis may  
4 also play a role in the susceptibility to Helicobacter Pylori infections [19]. Some  
5 visceral disease, such as endometriosis, can be associated with chronic pelvic pain,  
6 but there is no correlation between the extent of the endometriotic lesions and the  
7 severity of the pain complaint [17], and the chronic pain complaint might persist  
8 although the endometriotic lesions have been successfully treated from an  
9 organic/pathology standpoint. In the current classification it is unclear how to  
10 proceed in case a secondary pain condition becomes primary when the underlying  
11 cause has gone, but the pain persists.

12  
13 d) The term primary visceral pain might be a challenging term for insurance  
14 reimbursements regarding diagnostic work-up in some countries. Should a patient  
15 with vulvodynia first be coded for billing as secondary visceral pain, until the  
16 diagnostic work-up is completed and other diseases with similar symptoms have  
17 been excluded? This will be an important question to be addressed by health  
18 insurance systems to insure that adequate diagnostic work-up of patients with  
19 presumed primary chronic visceral pain can be pursued and reimbursed. An  
20 additional aspect is that this issue will have consequences for interpreting ICD codes  
21 on visceral pain for epidemiological studies.

## 32 33 34 35 36 37 **6. Conclusions**

38 The IASP aims that its ICD 11 taxonomy will provide an umbrella classification  
39 system for all chronic pain syndromes. A collaboration with international scientific  
40 societies of gynecology, gastroenterology, urology, psychosomatic medicine and  
41 psychiatry will be necessary to identify pathways to link the established visceral  
42 taxonomies with the new ICD-11 codes proposed by IASP and to be implemented  
43 worldwide as a uniform pain taxonomy.

44 The ICD diagnostic and coding manual that unifies medical and psychiatric practice  
45 across the globe, determines how conditions in medicine and mental health are  
46 organized and how they are conceived. At present, there is a mess of terms and  
47 criteria around bodily distress disorders. A collaboration of the different working  
48 groups of the WHO (IASP, WHO Somatic Distress and Dissociative Disorders  
49 Working Group, WHO Working Group consisting of primary care physicians with a

special interest in mental illness) is urgently needed to achieve a consistent terminology by overcoming boundaries of subspecialties.

5 **Conflicts of interest:** APB, BM and WH have no financial conflicts of interest to  
6 declare.  
7

8  
9  
10  
11 - BM is a member of the EAU taxonomy group.

12  
13 - APB was Chair of the PUGO taxonomy group from 2004-2012, which developed  
14 the 2012 IASP SIG visceral pain taxonomy. He was a member of the EAU, and he  
15 has contributed to the IASP - ICD 11 Taxonomy process and has authored on the  
16 subject.  
17

18  
19 - UW serves on the External Consultant Board for the “*NIH Preclinical Screening*  
20 *Platform for Pain*”, a novel pre-clinical pain therapy screening platform that has been  
21 launched at the National Institute for Neurological Disorders and Stroke in the U.S.  
22 as part of the *NIH Helping to End Addiction Long-term Initiative*. In her capacity as a  
23 special government employee of the U.S. Food and Drug Administration (FDA), she  
24 has served as a voting member of the FDA Anesthetic and Analgesic Drug Products  
25 Advisory Committee. She has served as a consultant for Grünenthal GmbH and  
26 Ironwood Pharmaceuticals Inc. UW is a member of the Analgesic, Anesthetic, and  
27 Addiction Clinical Trial Translations, Innovations, Opportunities, and Networks  
28 (ACTION) public-private partnership with the United States Food and Drug  
29 Administration (FDA) <http://www.action.org> since 2012. As a member of ACTION  
30 she is an inaugural committee member of the working group *Addressing Disparities*  
31 *in the Distribution and Assessment of Pain and its Treatments* (ADDAPT) since 2017  
32 and a committee member of the *ACTION-American Pain Society Pain Taxonomy*  
33 *(AAPT) collaboration*, where she serves as the co-chair for the taxonomy working  
34 group developing the AAPT Diagnostic Criteria for Chronic Abdominal, Pelvic, and  
35 Urogenital Pain since 2014. She was member of the PUGO taxonomy group of IASP  
36 from 2004-2012, which developed the 2012 IASP SIG visceral pain taxonomy, and  
37 served as the elected chair of PUGO during that time from 2005-2008. She served as  
38 a consulting member of the International Continence Society guideline panel for the  
39 Standardization of Terminology for Chronic Pelvic Pain from 2011 to 2016. She has

Table 2: Comparison of key features of taxonomies of chronic visceral pain II (alphabetical order)

<b>Organisation [References]</b>	<b>Definition chronic visceral (abdominal) pain</b>	<b>Validation studies</b>	<b>Overlap of IASP with other taxonomies</b>	<b>Pain, 'symptom' or 'disease in its own right'?</b>
European Association of Urology (EAU) [9-11]	Chronic pelvic pain is chronic or persistent pain perceived in structures related to the pelvis of either men or women. It is often associated with negative cognitive, behavioural, sexual and emotional consequences as well as with symptoms suggestive of lower urinary tract, sexual, bowel, pelvic floor or gynaecological dysfunction	Not known	The terminology is based on the 2012 IASP visceral pain Taxonomy The Rome III criteria for IBS were adapted.	Disease
International Association for the Study of Pain (IASP) and World Health Organization (WHO) collaboration for ICD -11 Taxonomy	Pain originating from internal organs. Chronic primary and secondary visceral pains are often associated with significant emotional distress (such as anger, anxiety, and	One study [4]	Rome foundation criteria for IBS and abdominal/epigastric pain syndrome were adapted	Disease

## ICMJE Form for Disclosure of Potential Conflicts of Interest

### Instructions

The purpose of this form is to provide readers of your manuscript with information about your other interests that could influence how they receive and understand your work. The form is designed to be completed electronically and stored electronically. It contains programming that allows appropriate data display. Each author should submit a separate form and is responsible for the accuracy and completeness of the submitted information. The form is in six parts.

#### 1. Identifying information.

#### 2. The work under consideration for publication.

This section asks for information about the work that you have submitted for publication. The time frame for this reporting is that of the work itself, from the initial conception and planning to the present. The requested information is about resources that you received, either directly or indirectly (via your institution), to enable you to complete the work. Checking "No" means that you did the work without receiving any financial support from any third party – that is, the work was supported by funds from the same institution that pays your salary and that institution did not receive third-party funds with which to pay you. If you or your institution received funds from a third party to support the work, such as a government granting agency, charitable foundation or commercial sponsor, check "Yes".

#### 3. Relevant financial activities outside the submitted work.

This section asks about your financial relationships with entities in the bio-medical arena that could be perceived to influence, or that give the appearance of potentially influencing, what you wrote in the submitted work. You should disclose interactions with ANY entity that could be considered broadly relevant to the work. For example, if your article is about testing an epidermal growth factor receptor (EGFR) antagonist in lung cancer, you should report all associations with entities pursuing diagnostic or therapeutic strategies in cancer in general, not just in the area of EGFR or lung cancer.

Report all sources of revenue paid (or promised to be paid) directly to you or your institution on your behalf over the 36 months prior to submission of the work. This should include all monies from sources with relevance to the submitted work, not just monies from the entity that sponsored the research. Please note that your interactions with the work's sponsor that are outside the submitted work should also be listed here. If there is any question, it is usually better to disclose a relationship than not to do so.

For grants you have received for work outside the submitted work, you should disclose support ONLY from entities that could be perceived to be affected financially by the published work, such as drug companies, or foundations supported by entities that could be perceived to have a financial stake in the outcome. Public funding sources, such as government agencies, charitable foundations or academic institutions, need not be disclosed. For example, if a government agency sponsored a study in which you have been involved and drugs were provided by a pharmaceutical company, you need only list the pharmaceutical company.

#### 4. Intellectual Property.

This section asks about patents and copyrights, whether pending, issued, licensed and/or receiving royalties.

#### 5. Relationships not covered above.

Use this section to report other relationships or activities that readers could perceive to have influenced, or that give the appearance of potentially influencing, what you wrote in the submitted work.

#### Definitions.

**Entity:** government agency, foundation, commercial sponsor, academic institution, etc.

**Grant:** A grant from an entity, generally [but not always] paid to your organization

**Personal Fees:** Monies paid to you for services rendered, generally honoraria, royalties, or fees for consulting, lectures, speakers bureaus, expert testimony, employment, or other affiliations

**Non-Financial Support:** Examples include drugs/equipment supplied by the entity, travel paid by the entity, writing assistance, administrative support, etc.

**Other:** Anything not covered under the previous three boxes

**Pending:** The patent has been filed but not issued

**Issued:** The patent has been issued by the agency

**Licensed:** The patent has been licensed to an entity, whether earning royalties or not

**Royalties:** Funds are coming in to you or your institution due to your patent

## ICMJE Form for Disclosure of Potential Conflicts of Interest

### Section 1. Identifying Information

1. Given Name (First Name) Ursula	2. Surname (Last Name) Wesselmann	3. Date 06-November-2019
4. Are you the corresponding author? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No		Corresponding Author's Name Winfried Häuser
5. Manuscript Title Taxonomies for chronic visceral pain		
6. Manuscript Identifying Number (if you know it) PAIN-D-19-00563		

### Section 2. The Work Under Consideration for Publication

Did you or your institution **at any time** receive payment or services from a third party (government, commercial, private foundation, etc.) for any aspect of the submitted work (including but not limited to grants, data monitoring board, study design, manuscript preparation, statistical analysis, etc.)?

Are there any relevant conflicts of interest?  Yes  No

### Section 3. Relevant financial activities outside the submitted work.

Place a check in the appropriate boxes in the table to indicate whether you have financial relationships (regardless of amount of compensation) with entities as described in the instructions. Use one line for each entity; add as many lines as you need by clicking the "Add +" box. You should report relationships that were **present during the 36 months prior to publication**.

Are there any relevant conflicts of interest?  Yes  No

If yes, please fill out the appropriate information below.

Name of Entity	Grant?	Personal Fees?	Non-Financial Support?	Other?	Comments
Grünenthal GmbH	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Consultant for urogenital/visceral pain, received honorarium (fee for service)
Ironwood Pharmaceuticals Inc	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Consultant for urogenital/visceral pain, received honorarium (fee for service)

## ICMJE Form for Disclosure of Potential Conflicts of Interest

---

### Section 4. Intellectual Property -- Patents & Copyrights

Do you have any patents, whether planned, pending or issued, broadly relevant to the work?  Yes  No

### Section 5. Relationships not covered above

Are there other relationships or activities that readers could perceive to have influenced, or that give the appearance of potentially influencing, what you wrote in the submitted work?

- Yes, the following relationships/conditions/circumstances are present (explain below):  
 No other relationships/conditions/circumstances that present a potential conflict of interest

UW serves on the External Consultant Board for the "NIH Preclinical Screening Platform for Pain", a novel pre-clinical pain therapy screening platform that has been launched at the National Institute for Neurological Disorders and Stroke in the U.S. as part of the NIH Helping to End Addiction Long-term Initiative. In her capacity as a special government employee of the U. S. Food and Drug Administration (FDA), she has served as a voting member of the FDA Anesthetic and Analgesic Drug Products Advisory Committee. UW is a member of the Analgesic, Anesthetic, and Addiction Clinical Trial Translations, Innovations, Opportunities, and Networks (ACTTION) public-private partnership with the United States Food and Drug Administration (FDA) <http://www.acttion.org> since 2012. As a member of ACTTION she is a committee member of the ACTTION-American Pain Society Pain Taxonomy (AAPT) collaboration, where she serves as the co-chair for the taxonomy working group developing the AAPT Diagnostic Criteria for Chronic Abdominal, Pelvic, and Urogenital Pain since 2014. She was member of the PUGO taxonomy group of IASP from 2004-2012, which developed the 2012 IASP SIG visceral pain taxonomy, and served as the elected chair of PUGO during that time from 2005-2008. She served as a consulting member of the International Continence Society guideline panel for the Standardization of Terminology for Chronic Pelvic Pain from 2011 to 2016. She has contributed to the IASP - ICD 11 Taxonomy process and has authored on the subject.

At the time of manuscript acceptance, journals will ask authors to confirm and, if necessary, update their disclosure statements. On occasion, journals may ask authors to disclose further information about reported relationships.

## ICMJE Form for Disclosure of Potential Conflicts of Interest

---

### Section 6. Disclosure Statement

Based on the above disclosures, this form will automatically generate a disclosure statement, which will appear in the box below.

Dr. Wesselmann reports personal fees from Grünenthal GmbH , personal fees from Ironwood Pharmaceuticals Inc, outside the submitted work; and UW serves on the External Consultant Board for the "NIH Preclinical Screening Platform for Pain", a novel pre-clinical pain therapy screening platform that has been launched at the National Institute for Neurological Disorders and Stroke in the U.S. as part of the NIH Helping to End Addiction Long-term Initiative. In her capacity as a special government employee of the U.S. Food and Drug Administration (FDA), she has served as a voting member of the FDA Anesthetic and Analgesic Drug Products Advisory Committee. UW is a member of the Analgesic, Anesthetic, and Addiction Clinical Trial Translations, Innovations, Opportunities, and Networks (ACTTION) public-private partnership with the United States Food and Drug Administration (FDA) <http://www.action.org> since 2012. As a member of ACTTION she is a committee member of the ACTTION-American Pain Society Pain Taxonomy (AAPT) collaboration, where she serves as the co-chair for the taxonomy working group developing the AAPT Diagnostic Criteria for Chronic Abdominal, Pelvic, and Urogenital Pain since 2014. She was member of the PUGO taxonomy group of IASP from 2004-2012, which developed the 2012 IASP SIG visceral pain taxonomy, and served as the elected chair of PUGO during that time from 2005-2008. She served as a consulting member of the International Continence Society guideline panel for the Standardization of Terminology for Chronic Pelvic Pain from 2011 to 2016. She has contributed to the IASP - ICD 11 Taxonomy process and has authored on the subject. .
