ABSTRACT

Introduction: Strengthening The Reporting Of Cohort Studies in Surgery (STROCCS) guidelines were developed in 2017 in order to improve the reporting quality of observational studies in surgery and updated in 2019. In order to maintain relevance and continue upholding good reporting quality among observational studies in surgery, we aimed to update STROCCS 2019 guidelines.

Methods: A STROCCS 2021 steering group was formed to come up with proposals to update STROCCS 2019 guidelines. An expert panel of researchers assessed these proposals and judged whether they should become part of STROCCS 2021 guidelines or not, through a Delphi consensus exercise.

Results: 42 people (89%) completed the DELPHI survey and hence participated in the development of STROCCS 2021 guidelines. All items received a score between 7 and 9 by greater than 70% of the participants, indicating a high level of agreement among the DELPHI group members with the proposed changes to all the items.

Conclusion: We present updated STROCCS 2021 guidelines to ensure ongoing good reporting quality among observational studies in surgery.

1. Introduction

Observational studies often feature in the surgical literature [1]. However, poor reporting quality among observational studies in surgery has been highlighted [2]. In the absence of good reporting quality, readers are unable to meaningfully assess the research, rendering it less useful [3]. The existence of reporting guidelines and the mandatory implementation of these guidelines by journals have shown to improve the reporting quality among various types of studies [4–6].

Hence, Strengthening The Reporting Of Cohort Studies in Surgery (STROCCS) guidelines were developed in 2017 in order to improve the reporting quality of cohort studies in surgery. Despite the title, STROCCS guidelines aimed to improve the reporting quality of all observational studies in surgery, including case-control studies and cross-sectional studies, as well as cohort studies [7]. STROCCS 2017 guidelines were updated in 2019; since its inception, STROCCS guidelines have been cited over 1000 times illustrating their acceptance within the surgical research community [8]. We aimed to update STROCCS 2019 guidelines in order to maintain relevance and continue upholding good reporting quality among observational studies in surgery.

2. Methods

The DELPHI methodology used in the development of STROCCS 2017 and 2019 guidelines was used in the development of STROCCS 2021 guidelines [9].

2.1. Coming up with proposals to update STROCCS 2019 guidelines

A STROCCS 2021 steering group was formed; members collaborated over email, Google Docs and WhatsApp Messenger to come up with proposals to update STROCCS 2019 guidelines.

2.2. Delphi process

The proposals to update STROCCS 2019 guidelines were put to an expert panel of researchers; they were asked to assess the proposals and judge whether they should become part of STROCCS 2021 guidelines or not, through a Delphi consensus exercise.

The Delphi questionnaire was sent to all participants using Google Forms. The participants were required to indicate whether they disagreed or agreed with the proposed changes to the 17 items of the

5c	2.4	4.8	92.8
5d	0.0	19.1	80.9
6a	0.0	4.8	95.2
6b	4.8	14.2	80.9
6c	2.4	9.5	88.1
7a	0.0	9.5	90.4
7b	0.0	14.2	85.7
7c	0.0	11.9	88.1
7d	4.8	9.5	85.7
7e	0.0	14.3	85.7
7f	0.0	11.9	88.1
8	0.0	9.5	90.5
9	2.4	9.6	88.0
10a	0.0	2.4	97.6
10b	0.0	9.5	90.4
10c	0.0	11.9	88.1
11a	0.0	19.0	80.9
11b	0.0	16.7	83.4
11c	0.0	14.3	85.7
12	0.0	9.6	90.4
13	2.4	19.1	78.5
14	0.0	9.5	90.5
15	0.0	14.3	85.7
16	2.4	14.3	83.3
17a	2.4	14.3	83.3
17b	0.0	4.8	95.2
17c	0.0	2.4	97.5

STROCSS 2019 guidelines, using a nine-point Likert scale, where 1 indicated "strongly disagree" and 9 indicated "strongly agree". If greater than 70% of participants gave a score between 7 and 9 for a proposed change, this was deemed as consensus and the item was updated. If less than 70% of participants gave a score between 7 and 9 for a proposed change, the item was left unaltered.

2.3. Participants

Researchers who were involved in the development of STROCSS 2017 and 2019 guidelines were invited to participate again. In addition, members of the International Journal of Surgery (IJS) editorial board were invited; IJS has mandated authors submitting surgical research papers using observational methodology to comply with STROCSS guidelines and hence IJS is an ardent supporter of STROCSS guidelines. Participants were accomplished researchers, authors, journal reviewers, editorial board members and editors representing countries across North America, South America, Europe, Africa, Asia, and Australia.

3. Results

47 people agreed to participate in the development of STROCSS 2021 guidelines; 42 people (89%) completed the DELPHI survey and hence participated in the development of STROCSS 2021 guidelines. Table 1 shows a summary of the scores given by the Delphi participants to indicate agreement or disagreement with the proposed changes to each item of the STROCSS 2019 guidelines. All items received a score

The STROCCS 2021 Guideline		
Item no.	Item description	Page
	research outcomes, dissemination of results etc.) and describe the extent to which they were involved.	
5a	Study design	
	<ul style="list-style-type: none"> State type of study design used (e.g. cohort, cross-sectional, case-control etc.) Describe other key elements of study design (e.g. retro-/prospective, single/multi-centred etc.) 	
5b	Setting and timeframe of research – comprehensively describe:	
	<ul style="list-style-type: none"> Geographical location Nature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) Dates (e.g. recruitment, exposure, follow-up, data collection etc.) 	
5c	Study groups	
	<ul style="list-style-type: none"> Total number of participants Number of groups Detail exposure/intervention allocated to each group Number of participants in each group 	
5d	Subgroup analysis – comprehensively describe:	
	<ul style="list-style-type: none"> Planned subgroup analyses Methods used to examine subgroups and their interactions 	
6a	Participants – comprehensively describe:	
	<ul style="list-style-type: none"> Inclusion and exclusion criteria with clear definitions Sources of recruitment (e.g. physician referral, study website, social media, posters etc.) Length, frequency and methods of follow-up (e.g. mail, telephone etc.) 	
6b	Recruitment – comprehensively describe:	
	<ul style="list-style-type: none"> Methods of recruitment to each patient group (e.g. all at once, in batches, continuously till desired sample size is reached etc.) Any monetary incentivisation of patients for recruitment and retention should be declared; clarify the nature of any incentives provided Nature of informed consent (e.g. written, verbal etc.) Period of recruitment 	
6c	Sample size – comprehensively describe:	
	<ul style="list-style-type: none"> Analysis to determine optimal sample size for study accounting for population/effect size Power calculations, where appropriate Margin of error calculation 	
METHODS - INTERVENTION AND CONSIDERATIONS		
7a	Pre-intervention considerations – comprehensively describe:	
	<ul style="list-style-type: none"> Preoperative patient optimisation (e.g. weight loss, smoking cessation, glycaemic control etc.) Pre-intervention treatment (e.g. medication review, bowel preparation, correcting hypothermia/-volemia/-tension, mitigating bleeding risk, ICU care etc.) 	
7b	Intervention – comprehensively describe:	
	<ul style="list-style-type: none"> Type of intervention and reasoning (e.g. pharmacological, surgical, physiotherapy, psychological etc.) Aim of intervention (preventative/therapeutic) Concurrent treatments (e.g. antibiotics, analgesia, anti-emetics, VTE prophylaxis etc.) Manufacturer and model details, where applicable 	
7c	Intra-intervention considerations – comprehensively describe:	
	<ul style="list-style-type: none"> Details pertaining to administration of intervention (e.g. anaesthetic, positioning, location, preparation, equipment needed, devices, sutures, operative techniques, operative time etc.) Details of pharmacological therapies used, including formulation, dosages, routes, and durations Figures and other media are used to illustrate 	

Table 2 (continued)

The STROCCS 2021 Guideline		
Item no.	Item description	Page
7d	Operator details – comprehensively describe:	
	<ul style="list-style-type: none"> Requirement for additional training Learning curve for technique Relevant training, specialisation and operator’s experience (e.g. average number of the relevant procedures performed annually) 	
7e	Quality control – comprehensively describe:	
	<ul style="list-style-type: none"> Measures taken to reduce inter-operator variability Measures taken to ensure consistency in other aspects of intervention delivery Measures taken to ensure quality in intervention delivery 	
7f	Post-intervention considerations – comprehensively describe:	
	<ul style="list-style-type: none"> Post-operative instructions (e.g. avoid heavy lifting) and care Follow-up measures Future surveillance requirements (e.g. blood tests, imaging etc.) 	
8	Outcomes – comprehensively describe:	
	<ul style="list-style-type: none"> Primary outcomes, including validation, where applicable Secondary outcomes, where appropriate Definition of outcomes If any validated outcome measurement tools are used, give full reference Follow-up period for outcome assessment, divided by group 	
9	Statistics – comprehensively describe:	
	<ul style="list-style-type: none"> Statistical tests and statistical package(s)/software used Confounders and their control, if known Analysis approach (e.g. intention to treat/per protocol) Any sub-group analyses Level of statistical significance 	
RESULTS		
10a	Participants – comprehensively describe:	
	<ul style="list-style-type: none"> Flow of participants (recruitment, non-participation, cross-over and withdrawal, with reasons). Use figure to illustrate. Population demographics (e.g. age, gender, relevant socioeconomic features, prognostic features etc.) Any significant numerical differences should be highlighted 	
10b	Participant comparison	
	<ul style="list-style-type: none"> Include table comparing baseline characteristics of cohort groups Give differences, with statistical relevance Describe any group matching, with methods 	
10c	Intervention – comprehensively describe:	
	<ul style="list-style-type: none"> Degree of novelty of intervention Learning required for interventions Any changes to interventions, with rationale and diagram, if appropriate 	
11a	Outcomes – comprehensively describe:	
	<ul style="list-style-type: none"> Clinician-assessed and patient-reported outcomes for each group Relevant photographs and imaging are desirable Any confounding factors and state which ones are adjusted 	
11b	Tolerance – comprehensively describe:	
	<ul style="list-style-type: none"> Assessment of tolerability of exposure/intervention Cross-over with explanation Loss to follow-up (fraction and percentage), with reasons 	
11c	Complications – comprehensively describe:	
	<ul style="list-style-type: none"> Adverse events and classify according to Clavien-Dindo classification* Timing of adverse events Mitigation for adverse events (e.g. blood transfusion, wound care, revision surgery etc.)

between 7 and 9 by greater than 70% of the participants, indicating consensus with the proposed changes to all the items. The revised STROCCS 2021 guidelines are shown in Table 2.

4. Discussion

Since the publication of STROCCS guidelines, it has been cited over 1000 times and thus enjoyed great acceptance within the surgical research community. We present the updated STROCCS 2021 guidelines to continue ensuring good reporting quality among observational studies in surgery; we encourage authors, reviewers, editors, and journals to adopt them.

Authors should cite STROCCS 2021 guidelines in their methods section; additionally, they should submit a completed STROCCS 2021 guidelines checklist alongside their manuscript for reviewers and editors to inspect and ensure compliance. STROCCS website (<https://www.strocsguideline.com>) has provided the STROCCS 2021 guidelines checklist in various formats to ensure accessibility.

5. Conclusion

We present updated STROCCS 2021 guidelines for authors, reviewers, editors, and journals to implement, with a view to ensuring good reporting quality among observational studies in surgery.
