

**Table 3. Non-core data elements for pathological reporting of ovarian, fallopian tube and primary peritoneal carcinoma.**

<b>Clinical</b>	<b>Macroscopic</b>	<b>Microscopic</b>	<b>Other</b>
Clinical information - Known gene predisposition - Prior neoadjuvant therapy - Other	Tumor dimensions Block identification key	Pattern of invasion Carcinosarcoma components Histological tumor grade† - Mucinous carcinomas Borderline tumor – special features# - Intraepithelial carcinoma for mucinous borderline tumor Response to neoadjuvant therapy - Coexistent pathology/precursor lesions	Ancillary studies - Immunohistochemistry - Molecular findings - Other

† Specification of mucinous carcinoma grade is non-core; specification of endometrioid carcinoma grade is considered core (see Table 1).

# Specification of presence or absence of intraepithelial carcinoma for mucinous borderline tumor is non-core; micropapillary architecture for serous borderline tumor, microinvasion and implants for serous and seromucinous borderline tumor is considered core (see Table 1).
