ROI-ROI connection absolute p-value from ROI-to-ROI connectivity analysis: parametric multivariate statistics use p-FDR corrected < 0.05 to select significant network-network connectivity set together with post-hoc p-uncorrected < 0.05 to select the significant connection. No significant differences were observed between the Amnestic Mild Cognitive Impairment group and the normal group. The beta values represent the slope of the regression line between clinical scores and connectivity values. The units of the beta values are "increase in Fisher-transformed correlations associated with a unit increase in clinical scores".

## SUPPLEMENTARY FIGURES

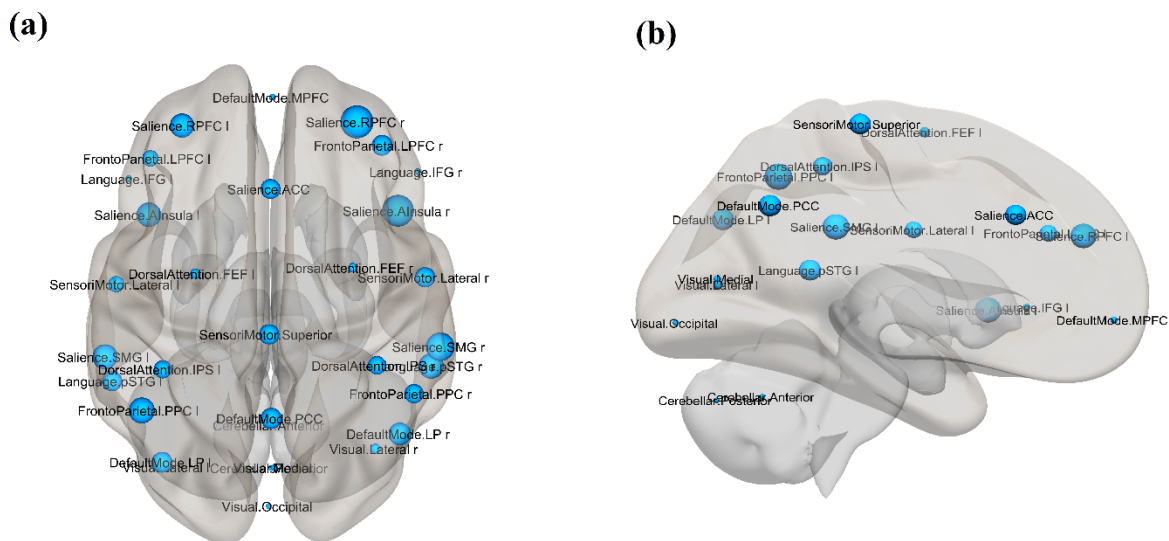

FIGURE S1. Selected ROIs corresponding to 8 resting state networks. (a) Superior view (b) Left medial view.

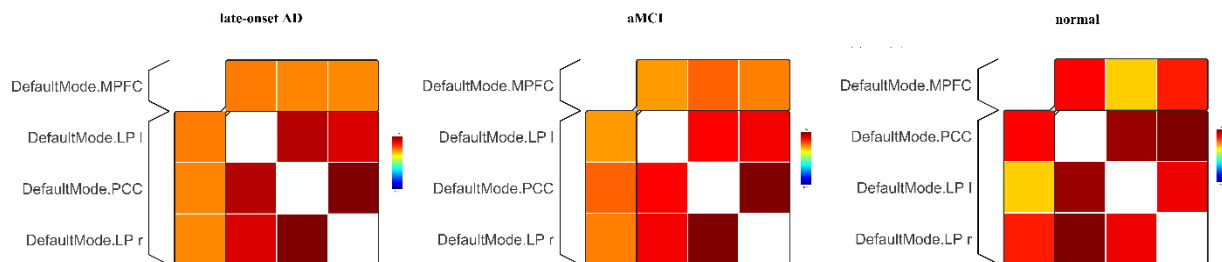

FIGURE S2. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in default mode network. Stronger connections are shown in more red tones. Medial prefrontal cortex (MPFC), left lateral parietal (LPL), right lateral parietal (LPR), and posterior cingulate cortex (PCC).

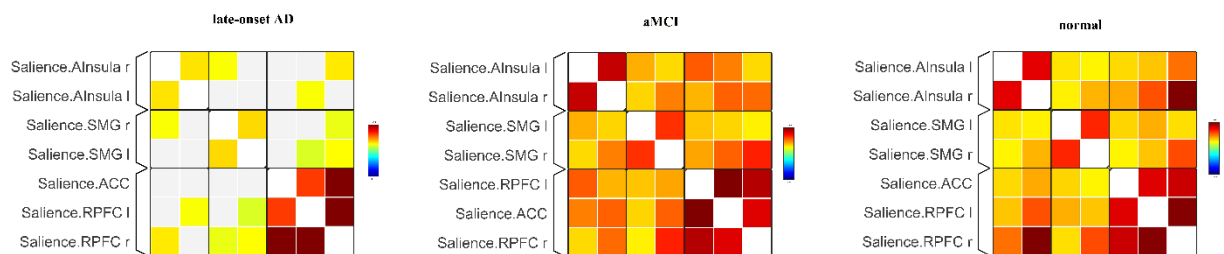

FIGURE S3. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in Saliency network. Stronger connections are shown in more red tones. Anterior cingulate cortex (ACC), left anterior insula (AInsulaL), right anterior insula (AInsulaR), left rostral prefrontal cortex (RPFCL), right rostral prefrontal cortex (RPFCL), left supramarginal gyrus (SMGL), right supramarginal gyrus (SMGR).

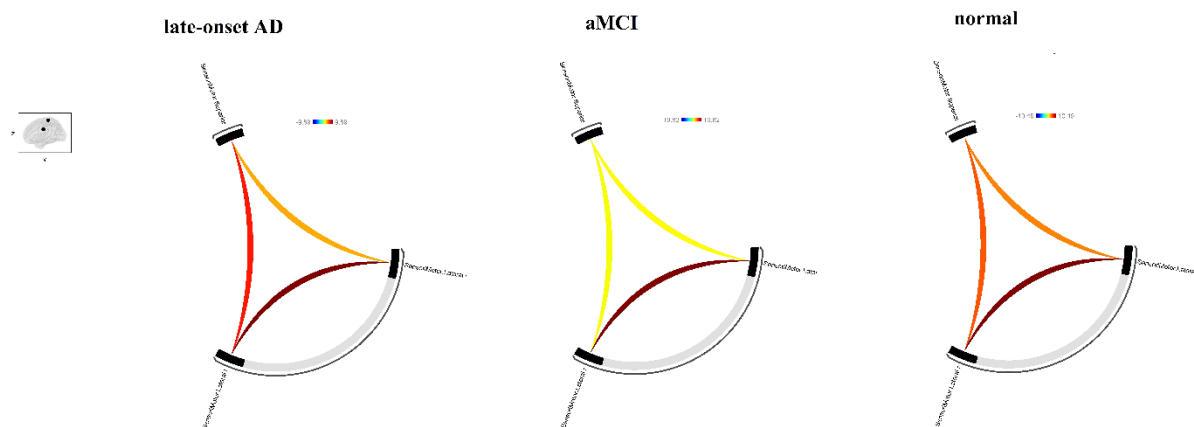

FIGURE S4. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in Sensorimotor. Stronger connections are shown in more red tones.

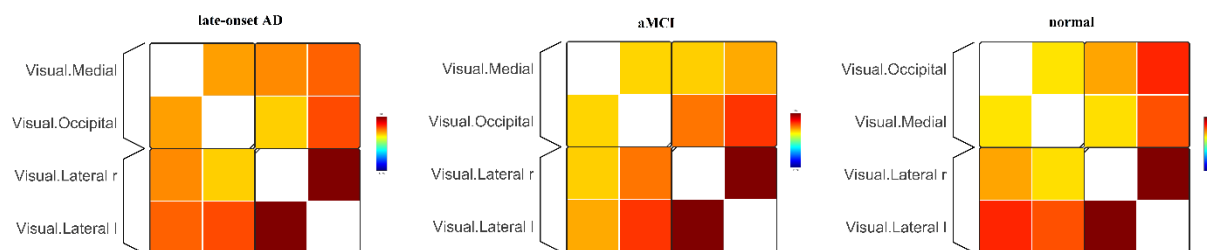

FIGURE S5. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in the visual network. Stronger connections are shown in more red tones.

FIGURE S6. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in the dorsal attention network. Stronger connections are shown in more red tones. Left frontal eye field (FEFL), right frontal eye field (FEFR), left intraparietal sulcus (IPSL), right intraparietal sulcus (IPSR).

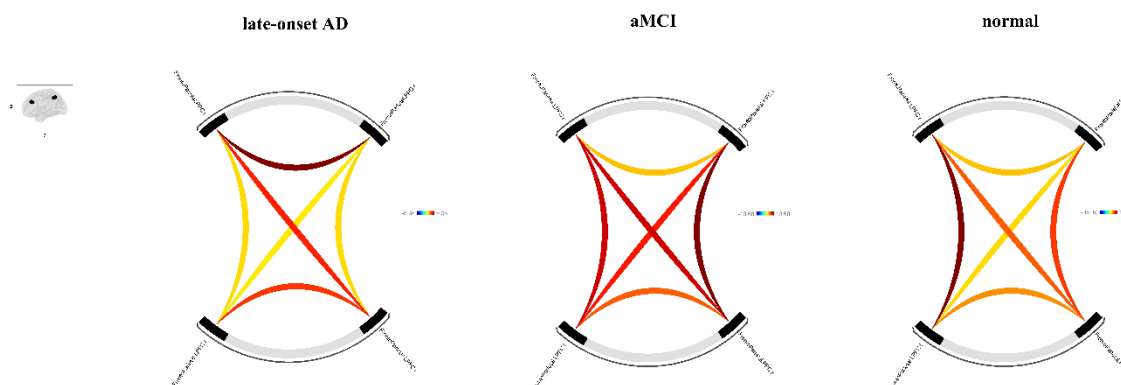

FIGURE S7. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in the frontoparietal network. Stronger connections are shown in more red tones. Left lateral prefrontal cortex (LPFCL), left posterior parietal cortex (PPCL), right lateral prefrontal cortex (LPFCR), right posterior parietal cortex (PPCR).

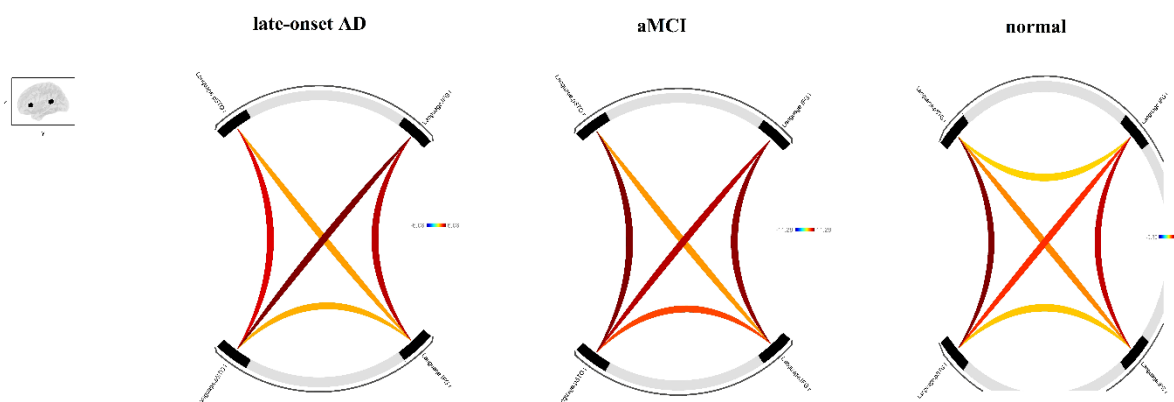

FIGURE S8. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in Language network. Stronger connections are shown in more red tones. Left inferior frontal gyrus (IFGL), right inferior frontal gyrus (IFGR), left posterior superior temporal gyrus (pSTGL), right posterior superior temporal gyrus (pSTGR).

FIGURE S9. Within-network comparison in Alzheimer's disease, amnesic mild cognitive impairment, and normal subjects in Cerebellar network. stronger connections are shown in more red tones.
