Appendix S1. Assessment of mismatch/bias between Bayesian Markov Chain Monte Carlo (MCMC) and maximum likelihood (ML) MAIHDA models

Due to the complexity of the designs of Next Steps and Millennium Cohort Study, and the differential non-response to the COVID-19 Survey used in this study [1], we aimed to conduct the analyses using the corresponding survey and non-response weights. Non-response weights were derived for all participants in the COVID-19 Survey following the Centre for Longitudinal Studies (CLS) Missing Data Strategy [2], and have been found to be effective at restoring sample representativeness [1,3].

However, the use of weights under the ‘standard’ analytical approach to estimating MAIHDA models (i.e., Bayesian Markov Chain Monte Carlo (MCMC) estimation, see [4-7]) has not yet been implemented. Therefore, in order to understand the extent of potential bias to which not accounting for the survey design and survey non-response may lead, we conducted an additional set of MAIHDA models using Maximum Likelihood (ML) estimation, which in turn does not provide (an approximation to) significance testing for the intersectional effects.

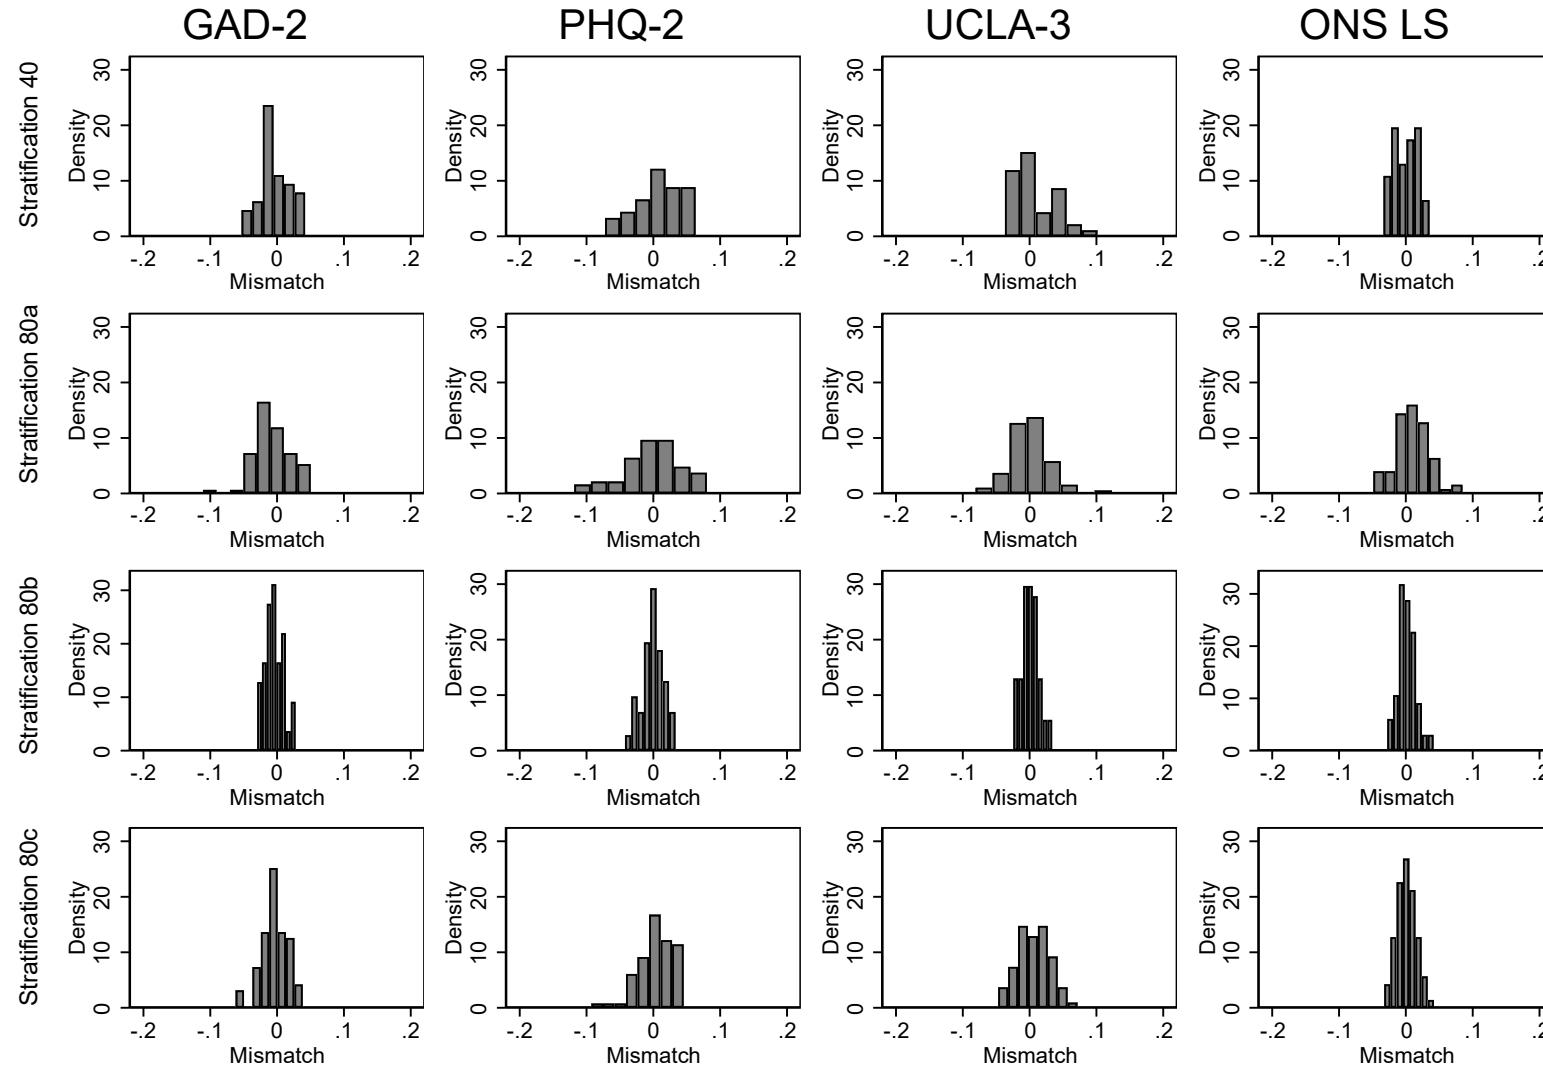

We first explored the degree of mismatch across the levels predicted at each intersectional stratum between unweighted MCMC and ML MAIHDA approaches across stratifications (40, 80a, 80b, 80c) and outcomes (anxiety symptomatology, depressive symptomatology, loneliness, and life satisfaction). The degree of mismatch across these two approaches was negligible, as shown evidenced in **Appendix S1.1** (note the narrow X-axis, with most cases being very close to zero, which signifies no difference across approaches).

We then explored the degree of mismatch across ML MAIHDA approaches using no weights, using survey weights, and using survey and non-response weights combined. Plots showing the mismatch across the different stratifications are available in **Appendix S1.2** (stratification 40), **Appendix S1.3** (stratification 80a), **Appendix S1.4** (stratification 80b), and **Appendix S1.5** (stratification 80c). Note that the X-axes in these graphs have been expanded (further under stratification 80c) to account for the larger differences/mismatch in some cases.

The exploration suggested that survey non-response was introducing bias in the estimation, thus hindering generalisability beyond the survey respondents of the results from models not accounting for differential non-response.

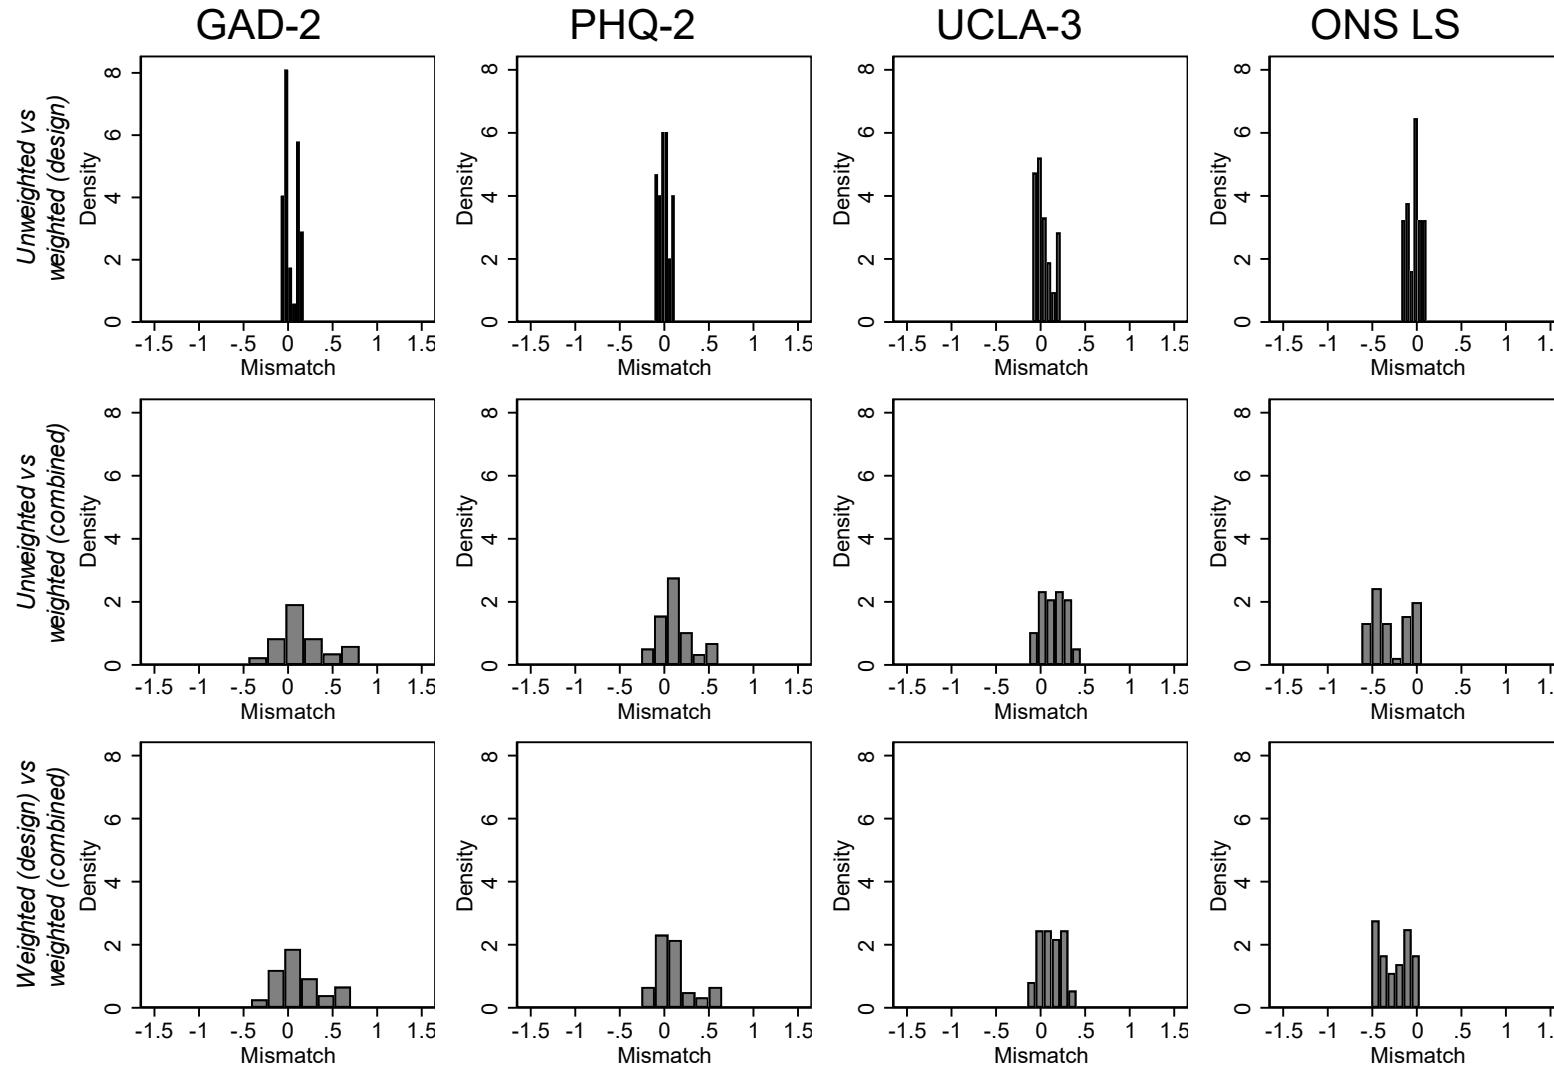

Appendix S1.1. Mismatch in stratum-specific predicted levels across unweighted Markov Chain Monte Carlo (MCMC) and Maximum Likelihood (ML) estimations.

GAD-2: 2-item Generalised Anxiety Disorder questionnaire; ONS LS: Office for National Statistics life satisfaction question; PHQ-2: 2-item Patient Health Questionnaire depression questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

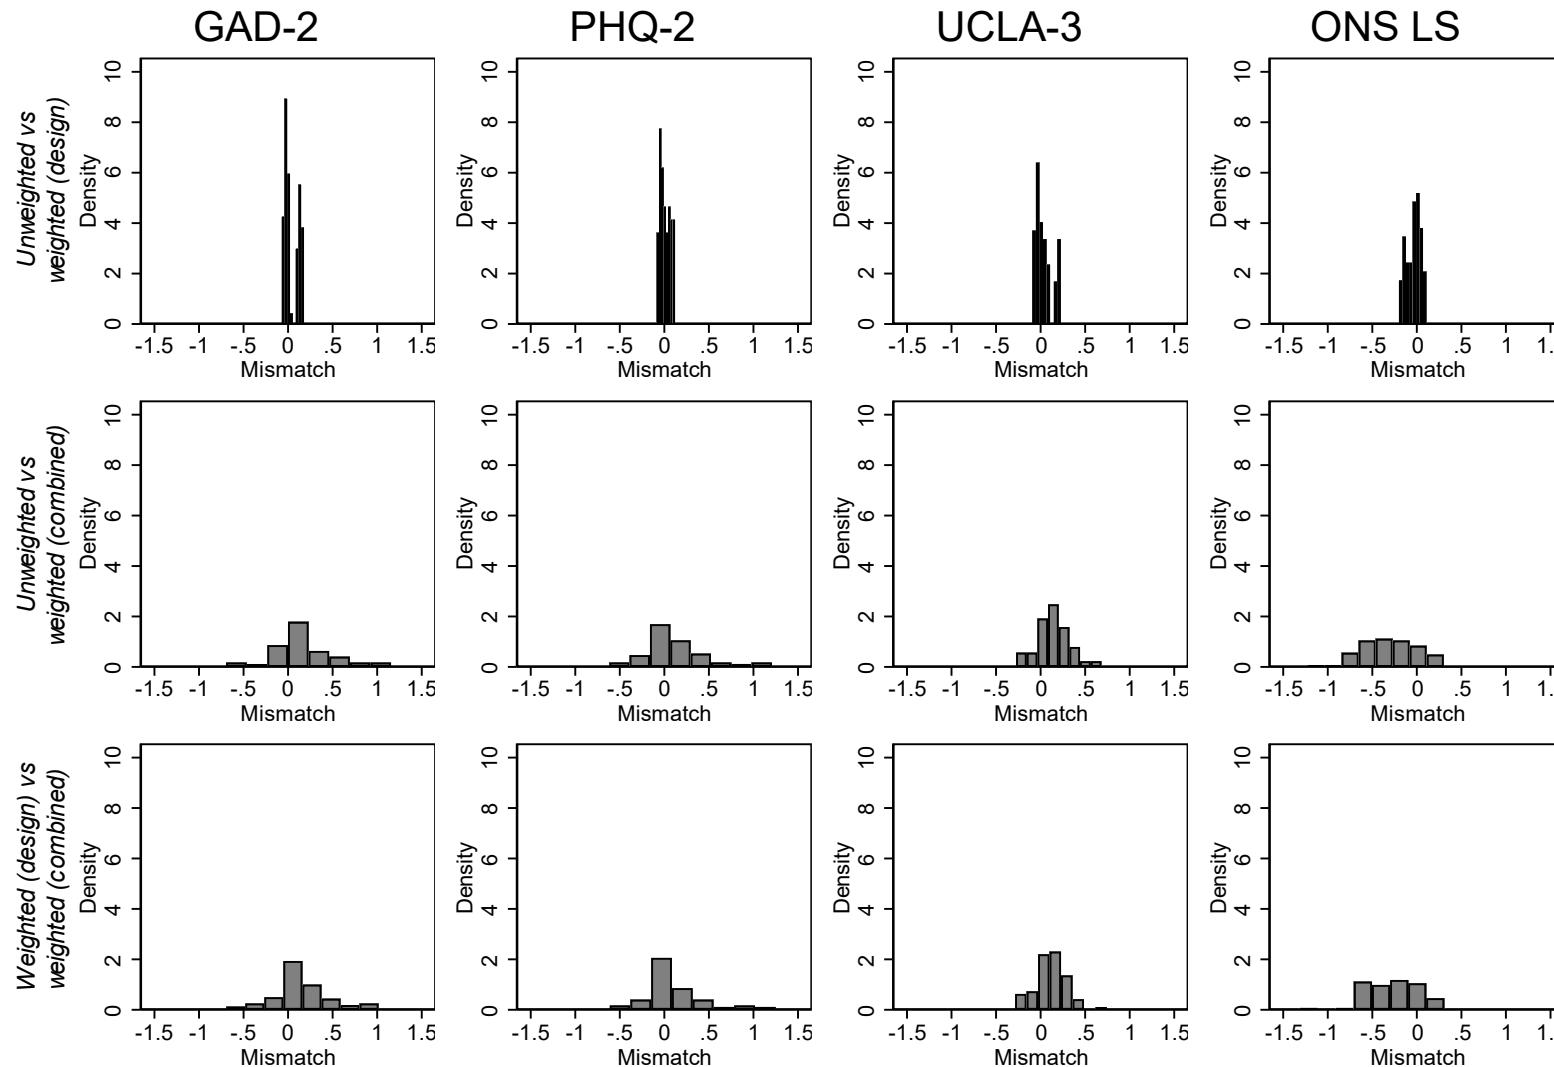

Appendix S1.2. Mismatch in stratum-specific predicted levels across Maximum Likelihood (ML) estimation approaches using stratification 40.

GAD-2: 2-item Generalised Anxiety Disorder questionnaire; ONS LS: Office for National Statistics life satisfaction question; PHQ-2: 2-item Patient Health Questionnaire depression questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

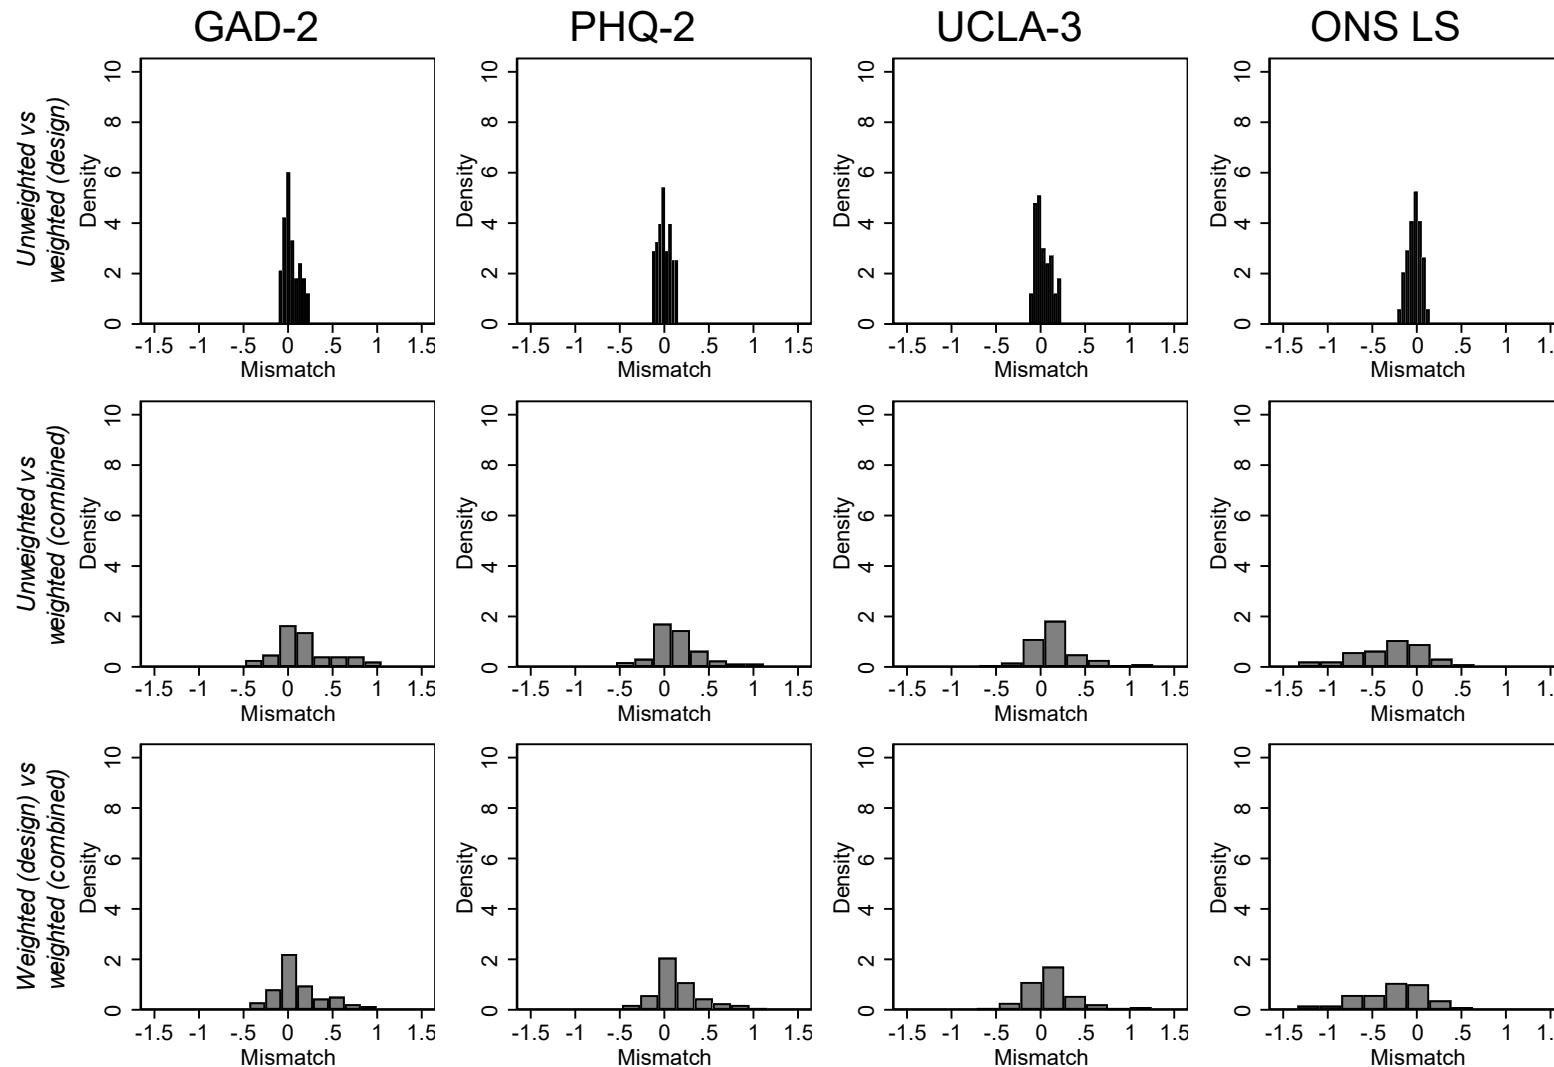

Appendix S1.3. Mismatch in stratum-specific predicted levels across Maximum Likelihood (ML) estimation approaches using stratification 80a.

GAD-2: 2-item Generalised Anxiety Disorder questionnaire; ONS LS: Office for National Statistics life satisfaction question; PHQ-2: 2-item Patient Health Questionnaire depression questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

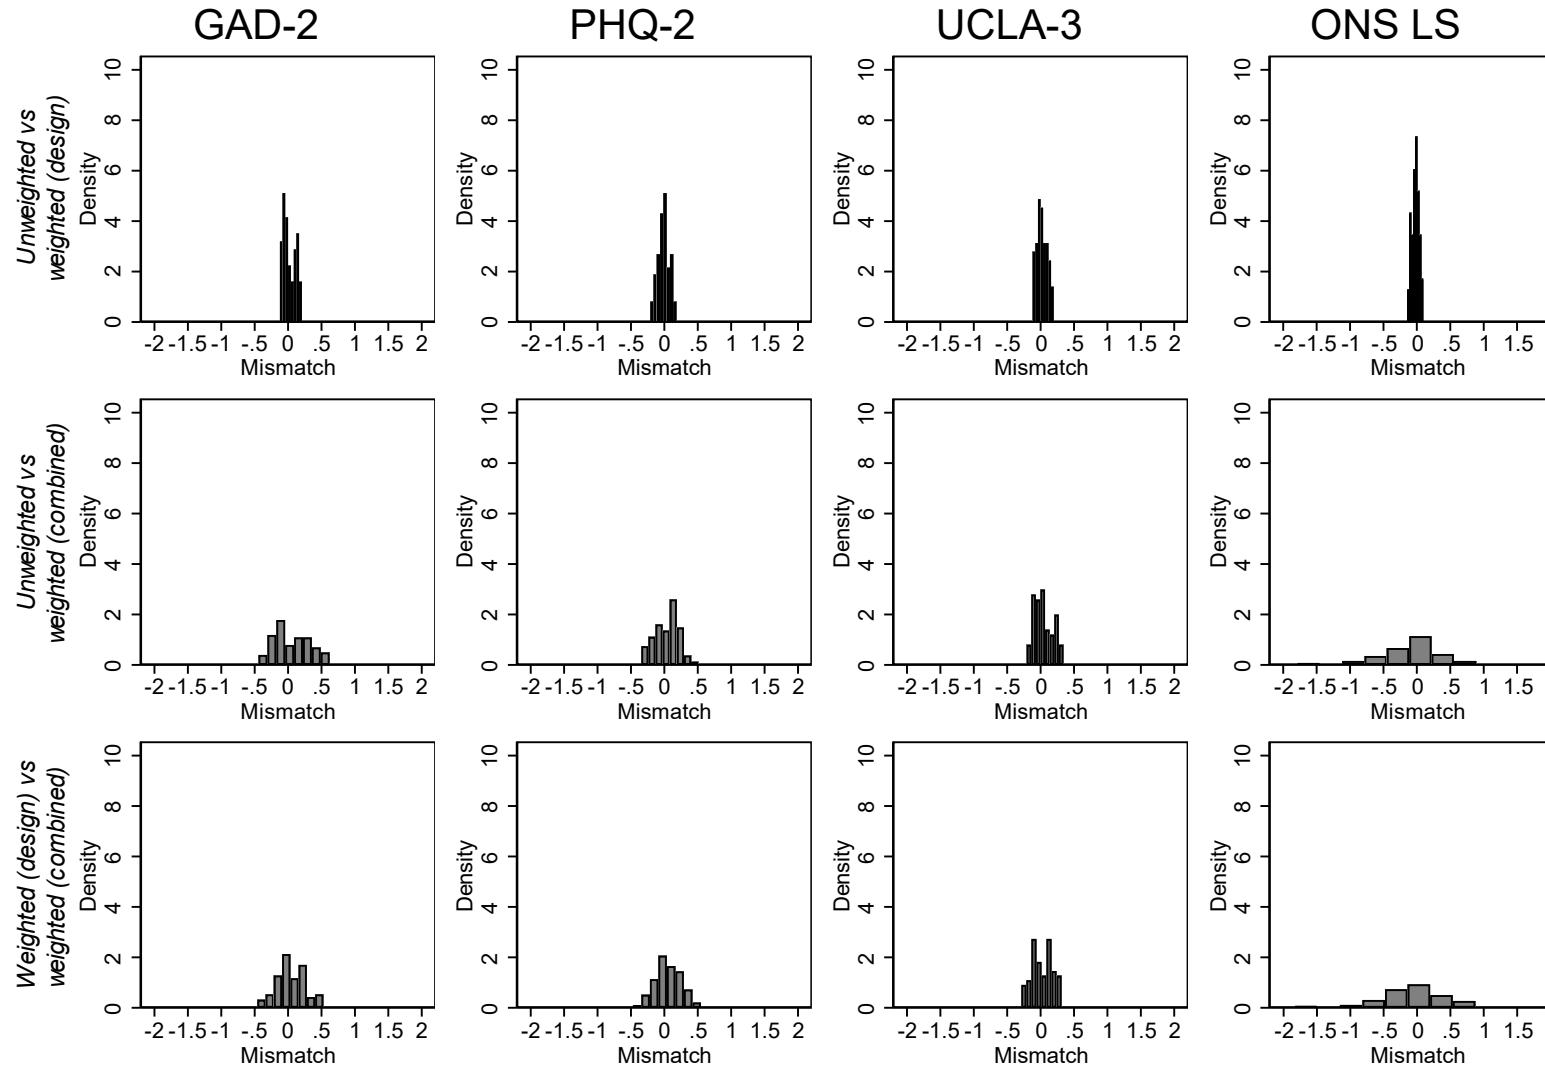

Appendix S1.4. Mismatch in stratum-specific predicted levels across Maximum Likelihood (ML) estimation approaches using stratification 80b.

GAD-2: 2-item Generalised Anxiety Disorder questionnaire; ONS LS: Office for National Statistics life satisfaction question; PHQ-2: 2-item Patient Health Questionnaire depression questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

Appendix S1.5. Mismatch in stratum-specific predicted levels across Maximum Likelihood (ML) estimation approaches using stratification 80c.

GAD-2: 2-item Generalised Anxiety Disorder questionnaire; ONS LS: Office for National Statistics life satisfaction question; PHQ-2: 2-item Patient Health Questionnaire depression questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

Appendix S2. Additional details on sensitivity checks and comparison with fixed-effects approach.

We used a fixed-effects multiple regression approach including interaction effects across all the variables adopted to define the intersections. This approach has several limitations compared to MAIHDA models when it comes to studying inequalities from an intersectional perspective, including the necessary use of reference categories and scalability and interpretability issues when multiple intersecting social identities/positions are included [4,8]. However, it remains a very widely used approach [9], so we performed this additional set of analysis for comparison purposes.

Table S1. Distribution of variables adopted to define the intersectional strata in the overall sample and by cohort.

	Next Steps (1990)	MCS (2000/2002)	Total
	N=4,167	N=4,421	N=8,588
Birth sex			
Female	2,599 (62.4%)	2,674 (60.5%)	5,273 (61.4%)
Male	1,568 (37.6%)	1,747 (39.5%)	3,315 (38.6%)
Ethnicity			
White (all)	3,062 (73.5%)	3,588 (81.2%)	6,650 (77.4%)
Mixed	183 (4.4%)	200 (4.5%)	383 (4.5%)
South Asian (Bangladeshi / Indian / Pakistani)	640 (15.4%)	413 (9.3%)	1,053 (12.3%)
Black African / Black Caribbean / Black British	178 (4.3%)	115 (2.6%)	293 (3.4%)
Other	104 (2.5%)	101 (2.3%)	205 (2.4%)
<i>Missing</i>	0 (0.0%)	4 (0.1%)	4 (0.0%)
Sexual orientation			
Heterosexual	3,774 (90.6%)	3,691 (83.5%)	7,465 (86.9%)
Sexual minority (homosexual, bisexual, other)	263 (6.3%)	559 (12.6%)	822 (9.6%)
<i>Missing</i>	130 (3.1%)	171 (3.9%)	301 (3.5%)
Residential IMD rank			
Higher 50% within-country IMD rank (more deprived)	2,164 (51.9%)	2,069 (46.8%)	4,233 (49.3%)
Lower 50% within-country IMD rank (less deprived)	1,948 (46.7%)	2,332 (52.7%)	4,280 (49.8%)
<i>Missing</i>	55 (1.3%)	20 (0.5%)	75 (0.9%)
Housing tenure			
Not homeowner/part owner	1,758 (42.2%)	2,293 (51.9%)	4,051 (47.2%)
Homeowner/part owner	2,182 (52.4%)	1,578 (35.7%)	3,760 (43.8%)
<i>Missing</i>	227 (5.4%)	550 (12.4%)	777 (9.0%)
Parental social class during childhood (age 11/14)			
Disadvantaged parental social class	1,396 (33.5%)	788 (17.8%)	2,184 (25.4%)
Advantaged parental social class	2,473 (59.3%)	2,915 (65.9%)	5,388 (62.7%)
<i>Missing</i>	298 (7.2%)	718 (16.2%)	1,016 (11.8%)

Note. Unweighted results. IMD: within-country Index of Multiple Deprivation; MCS: Millennium Cohort Study. "Other" ethnicity corresponds to all reported ethnicities not included in the other categories.

Table S2. Number of strata with at least one observation and missing strata under the different stratifications.

Outcome	Stratification	Valid strata	Missing strata
GAD-2 (anxiety symptomatology)	40	40	None
	80a	75	10211, 10410, 11311, 20510, 21411
	80b	76	11511, 20411, 20510, 21411
	80c	76	10210, 20411, 20510, 21410
PHQ-2 (depressive symptomatology)	40	40	None
	80a	75	10211, 10410, 11311, 20510, 21411
	80b	76	11511, 20411, 20510, 21411
	80c	76	10210, 20411, 20510, 21410
UCLA-3 (feelings of loneliness)	40	40	None
	80a	74	10211, 10410, 11311, 20410, 20510, 21411
	80b	74	<i>10410, 11511, 20410, 20411, 20510, 21411</i>
	80c	73	10210, <i>10410, 11310, 20410, 20411, 20510, 21410</i>
ONS life satisfaction question	40	40	None
	80a	75	10211, 10410, 11311, 20510, 21411
	80b	76	11511, 20411, 20510, 21411
	80c	76	10210, 20411, 20510, 21410

Note. GAD-2: 2-item Generalised Anxiety Disorder questionnaire; ONS: Office for National Statistics; PHQ-2: 2-item depression Patient Health Questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale. Stratification 40 is defined by cohort * birth sex * racial/ethnic group * sexual orientation; strata 80a include stratification 40 * within-country index of multiple deprivation rank of the residential area; strata 80b include stratification 40 * housing tenure; strata 80c include stratification 40 * parental social class during childhood (age 11/14). Missing strata in each stratification are common across all outcomes except for loneliness (UCLA-3), which has additional missing strata that have been highlighted in italics.

Intersectional strata are defined by generation/cohort (first digit: 1 Next Steps / 1990, 2 Millennium Cohort Study / 2000-2002), birth sex (second digit: 0 Male, 1 Female), racial/ethnic group (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority). The fifth digit corresponds to within-country Index of Multiple Deprivation rank in the stratification 80a (0 Below the median/more deprived area, 1 Above the median/less deprived area); housing tenure in stratification 80b (0 Not homeowner, 1 Homeowner / part owner); and parental social class during childhood in stratification 80c (0 Disadvantaged, 1 Advantaged).

Note. GAD-2: 2-item Generalised Anxiety Disorder questionnaire; ONS LS: Office for National Statistics' question on life satisfaction; PHQ-2: 2-item depression Patient Health Questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale. Stratification 40 is defined by cohort * birth sex * racial/ethnic group * sexual orientation; strata 80a include stratification 40 * within-country index of multiple deprivation rank of the residential area; strata 80b include stratification 40 * housing tenure; strata 80c include stratification 40 * parental social class during childhood (age 11/14).

Intersectional strata are defined by generation/cohort (first digit: 1 Next Steps / 1990, 2 Millennium Cohort Study / 2000-2002), birth sex (second digit: 0 Male, 1 Female), racial/ethnic group (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority). The fifth digit corresponds to within-country Index of Multiple Deprivation rank in the stratification 80a (0 Below the median/more deprived area, 1 Above the median/less deprived area); housing tenure in stratification 80b (0 Not homeowner, 1 Homeowner / part owner); and parental social class during childhood in stratification 80c (0 Disadvantaged, 1 Advantaged). This fifth digit does not apply to stratification 40, and therefore cells of strata differing only in that last digit are merged under that stratification.

Table S4. Fixed- and random-effects from the main models. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

Note. CI: confidence interval; GAD-2: 2-item Generalised Anxiety Disorder questionnaire; MCS: Millennium Cohort Study (born in 2000-2002); NS: Next Steps study (born in 1990); ONS: Office for National Statistics; PHQ-2: 2-item depression Patient Health Questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

Weighted results are adjusted for survey design characteristics, including survey and non-response weights. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

Note. CI: confidence interval; GAD-2: 2-item Generalised Anxiety Disorder questionnaire; MCS: Millennium Cohort Study (born in 2000-2002); NS: Next Steps study (born in 1990); ONS: Office for National Statistics; PHQ-2: 2-item depression Patient Health Questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

Weighted results are adjusted for survey design characteristics, including survey and non-response weights. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

Table S8. Results from the fixed-effects multiple regression approach using stratification 80b (cohort * birth sex * ethnic group * sexual orientation * housing tenure).

Note. CI: confidence interval; GAD-2: 2-item Generalised Anxiety Disorder questionnaire; MCS: Millennium Cohort Study (born in 2000-2002); NS: Next Steps study (born in 1990); ONS: Office for National Statistics; PHQ-2: 2-item depression Patient Health Questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

Weighted results are adjusted for survey design characteristics, including survey and non-response weights. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

Table S9. Results from the fixed-effects multiple regression approach using stratification 80c (cohort * birth sex * ethnic group * sexual orientation * childhood social class).

CI: confidence interval; GAD-2: 2-item Generalised Anxiety Disorder questionnaire; MCS: Millennium Cohort Study (born in 2000-2002); NS: Next Steps study (born in 1990); ONS: Office for National Statistics; PHQ-2: 2-item depression Patient Health Questionnaire; UCLA-3: 3-item University of California Los Angeles loneliness scale.

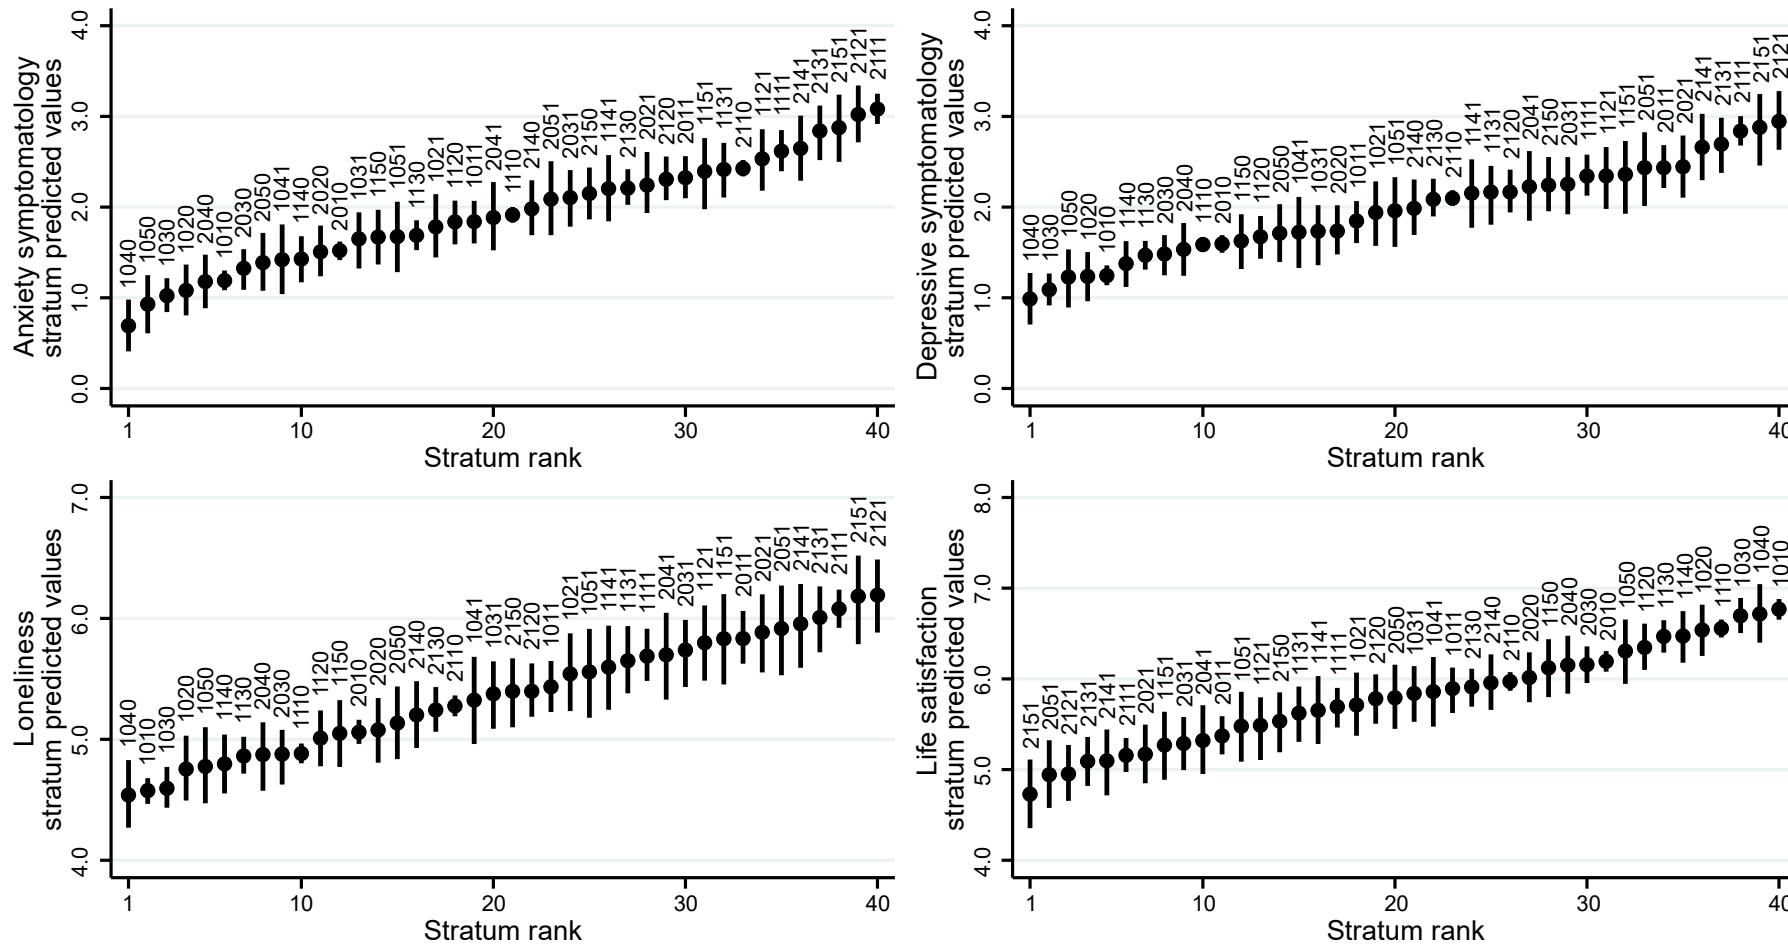

Weighted results are adjusted for survey design characteristics, including survey and non-response weights. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

Figure S1. Stratum-specific residual values and 95% credible intervals for each outcome using 40 strata. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

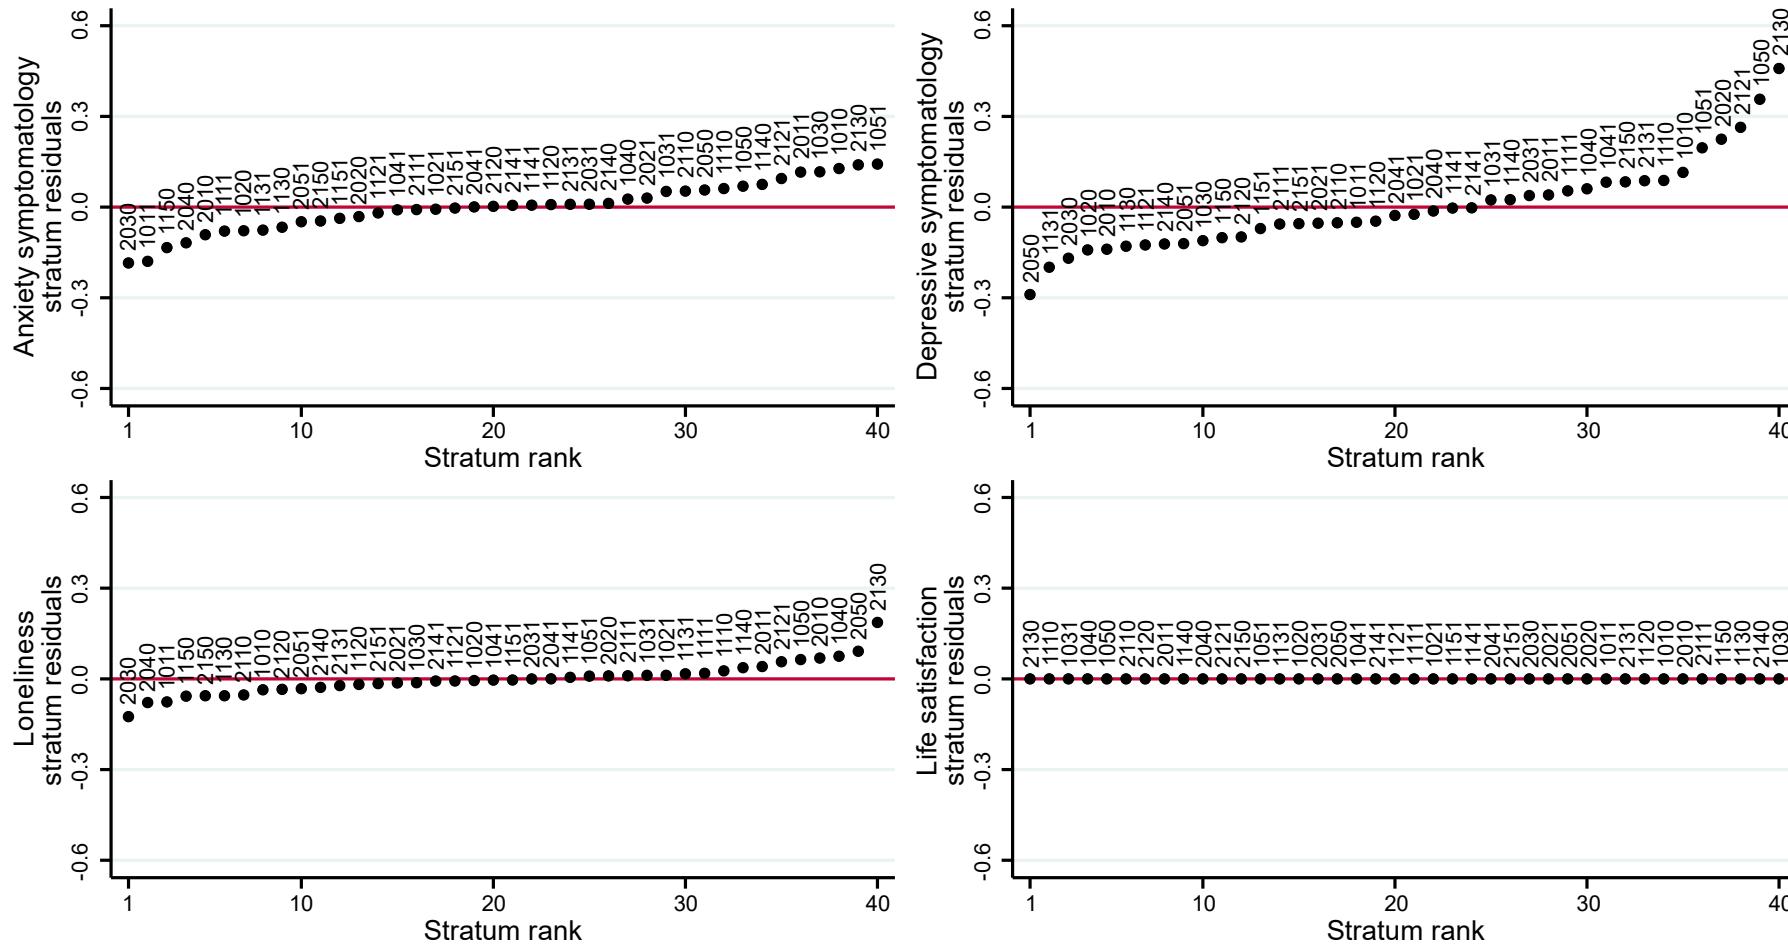

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study /2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority).

Figure S2. Stratum-specific predicted values and 95% credible intervals for each outcome using 40 strata. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

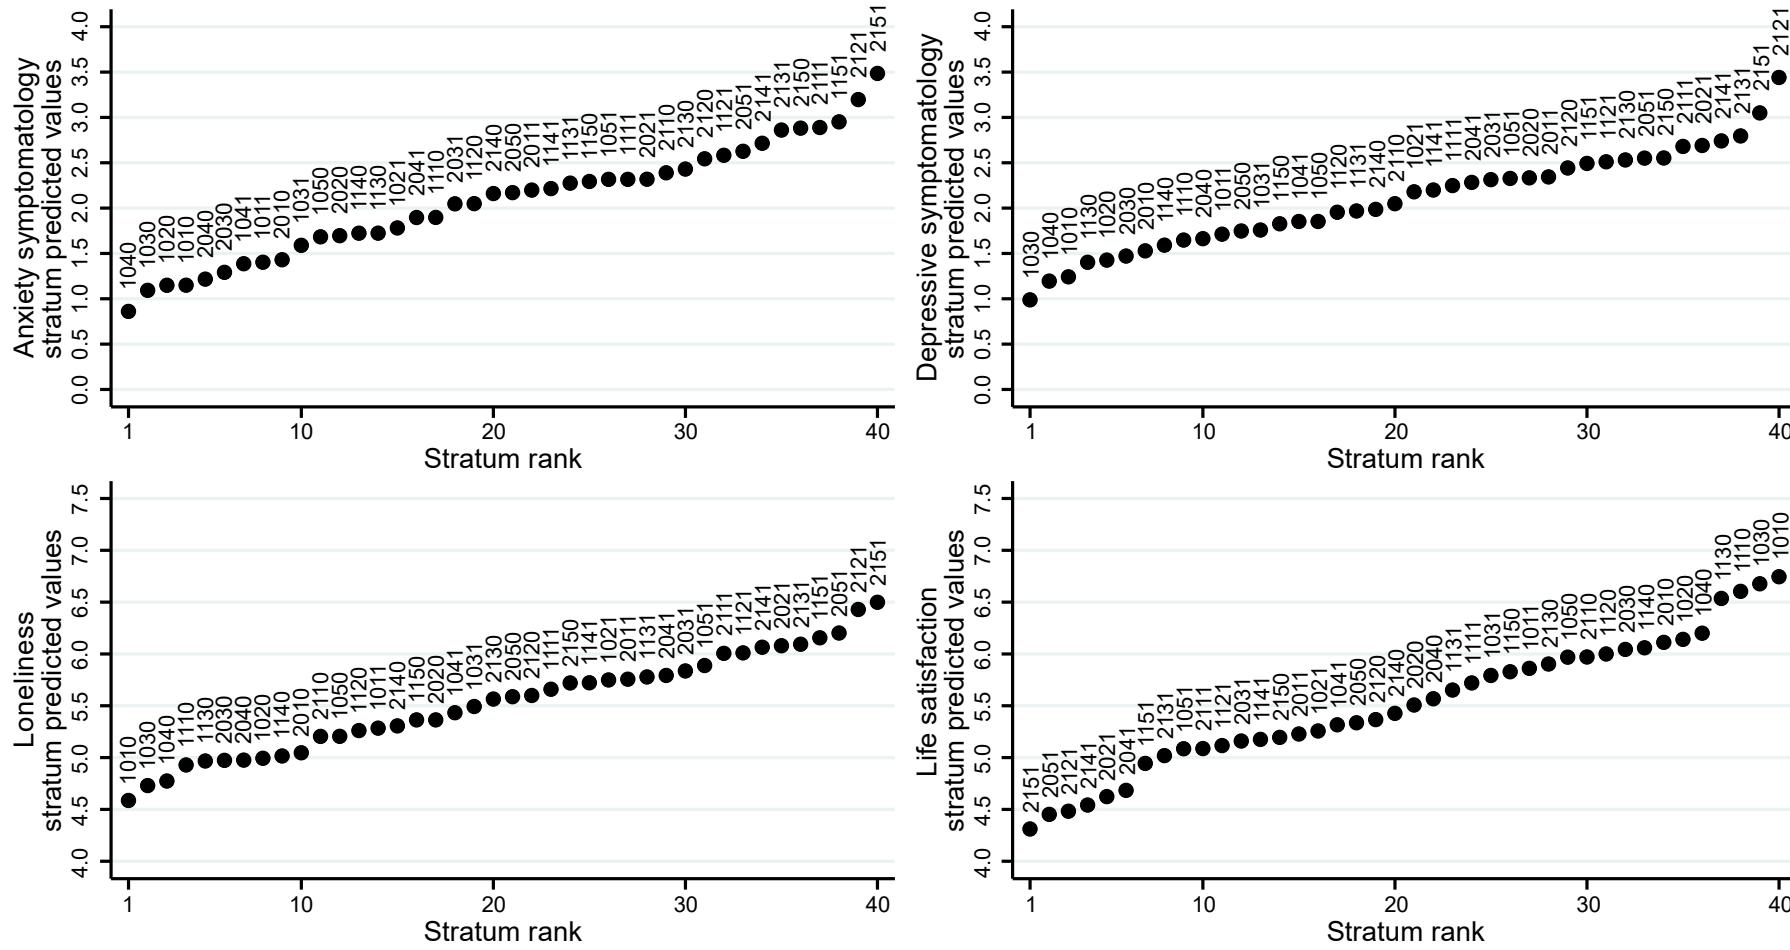

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study /2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority).

Figure S3. Stratum-specific residual values for each outcome using 40 strata. Maximum likelihood estimation, weighted (survey design and non-response) results.

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study /2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority).

Figure S4. Stratum-specific predicted values for each outcome using 40 strata. Maximum likelihood estimation, weighted (survey design and non-response) results.

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study /2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority).

Figure S5. Anxiety and depressive symptomatology predicted values of each intersectional strata. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

Each of the three parallel grey-shaded lines represents the results using each of the indicators of the socioeconomic position: residential Index of Multiple Deprivation (IMD) rank (leftmost line), housing tenure (centre line), or parental social class during childhood (rightmost line). M: male; F: female. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

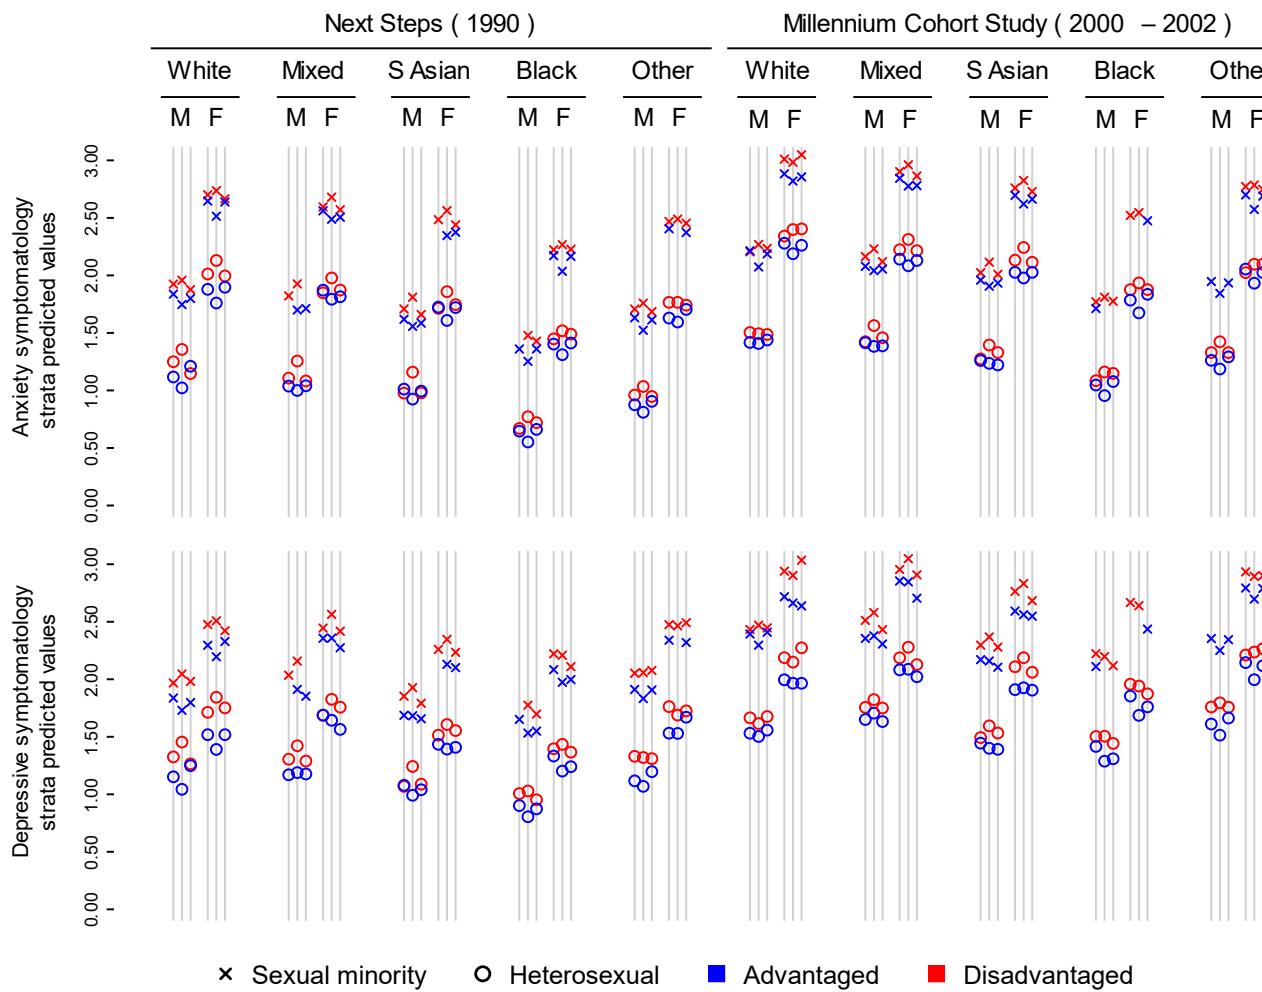

Figure S6. Loneliness and life satisfaction predicted values of each intersectional strata. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

Each of the three parallel grey-shaded lines represents the results using each of the indicators of the socioeconomic position: residential Index of Multiple Deprivation (IMD) rank (leftmost line), housing tenure (centre line), or parental social class during childhood (rightmost line). M: male; F: female. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

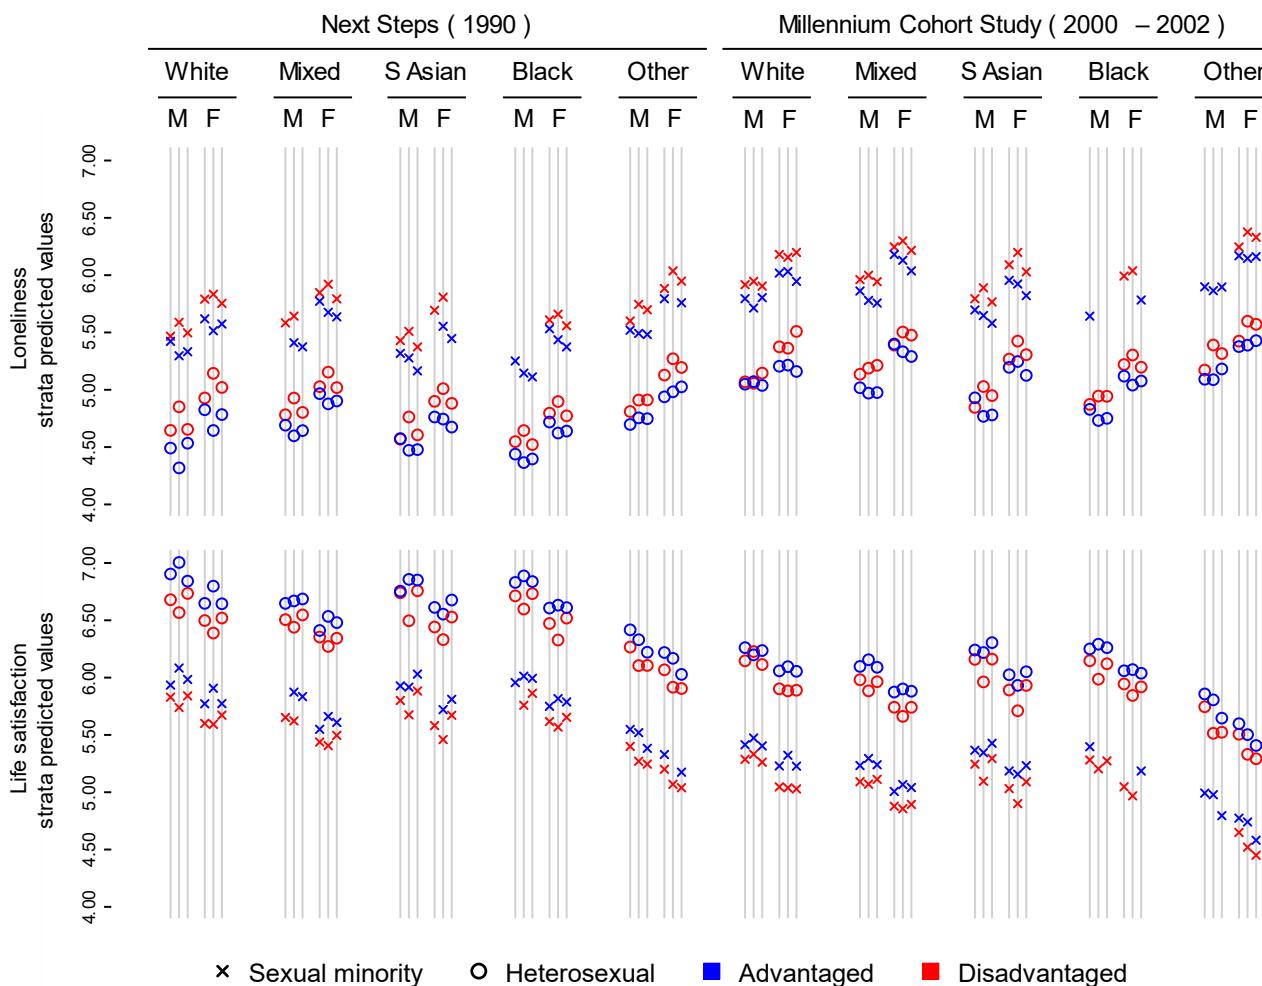

Figure S7. Anxiety and depressive symptomatology predicted values of each intersectional strata. Maximum likelihood estimation, weighted (survey design and non-response) results.

Each of the three parallel grey-shaded lines represents the results using each of the indicators of the socioeconomic position: residential Index of Multiple Deprivation (IMD) rank (leftmost line), housing tenure (centre line), or parental social class during childhood (rightmost line). M: male; F: female. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

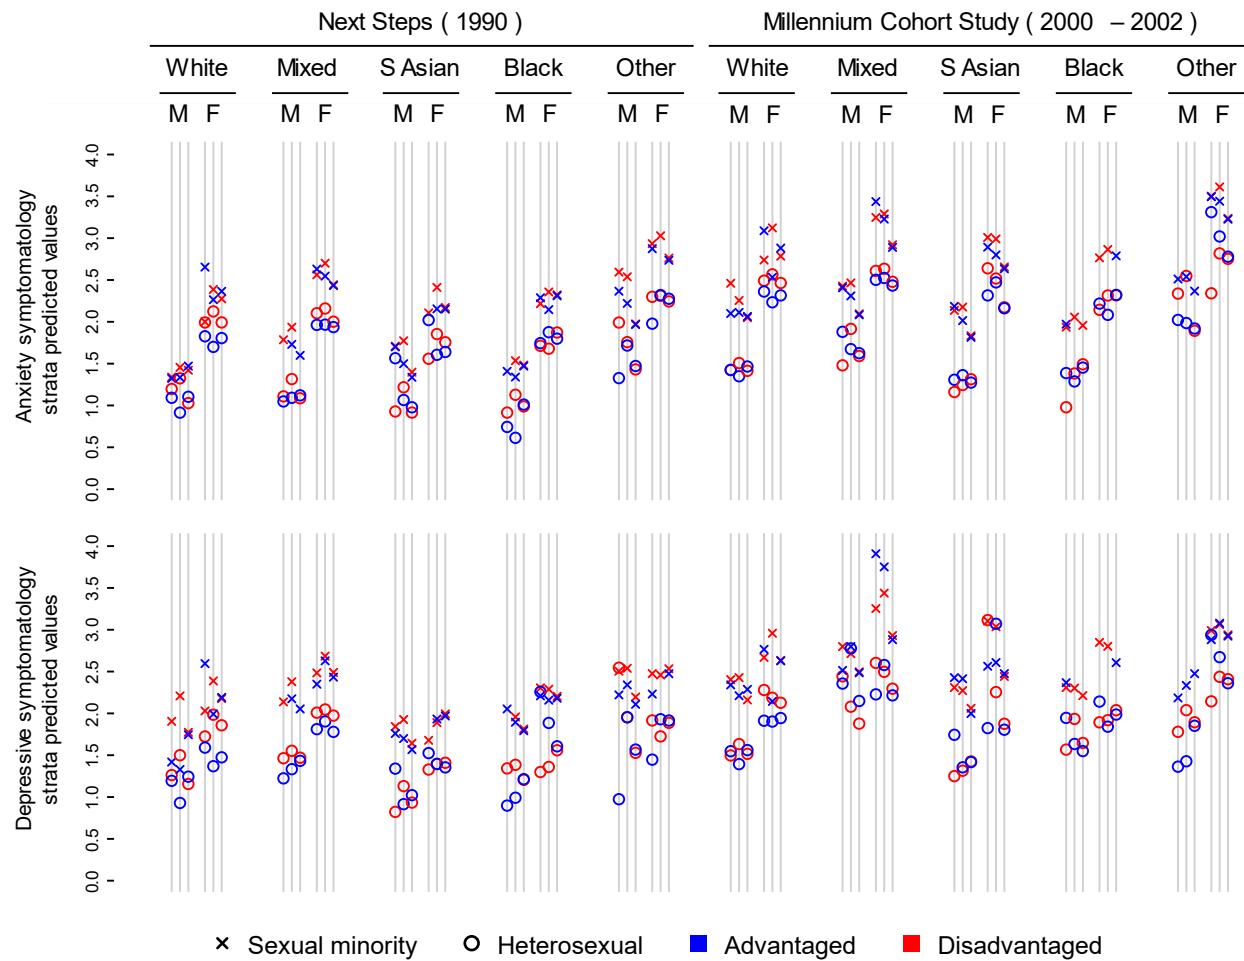

Figure S8. Loneliness and life satisfaction predicted values of each intersectional strata. Maximum likelihood estimation, weighted (survey design and non-response) results.

Each of the three parallel grey-shaded lines represents the results using each of the indicators of the socioeconomic position: residential Index of Multiple Deprivation (IMD) rank (leftmost line), housing tenure (centre line), or parental social class during childhood (rightmost line). M: male; F: female. White includes all White groups; South Asian includes Bangladeshi, Indian, and Pakistani groups; Black includes Black African, Black Caribbean, and Black British groups; Other includes all other ethnic group not included in the other categories.

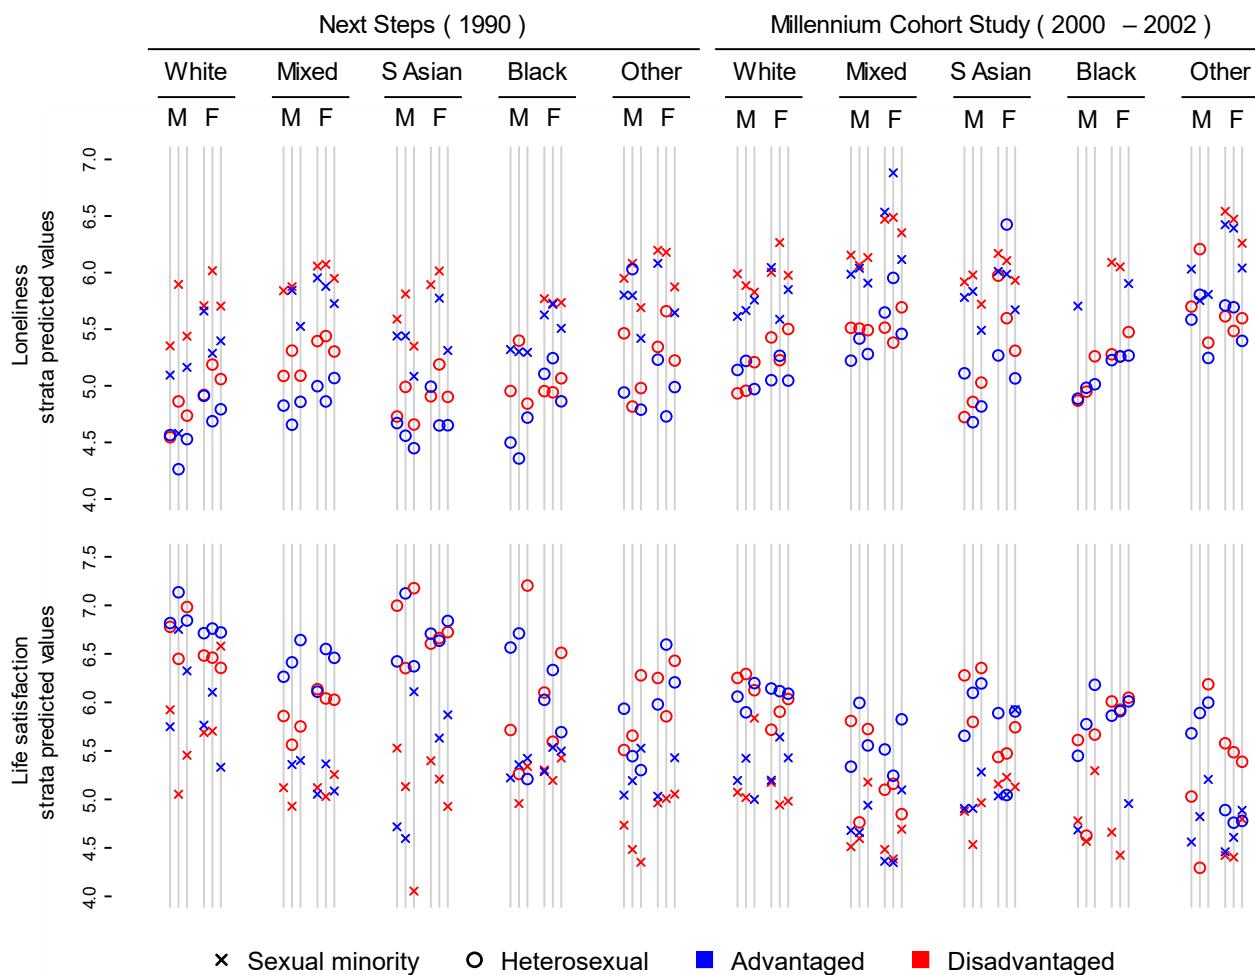

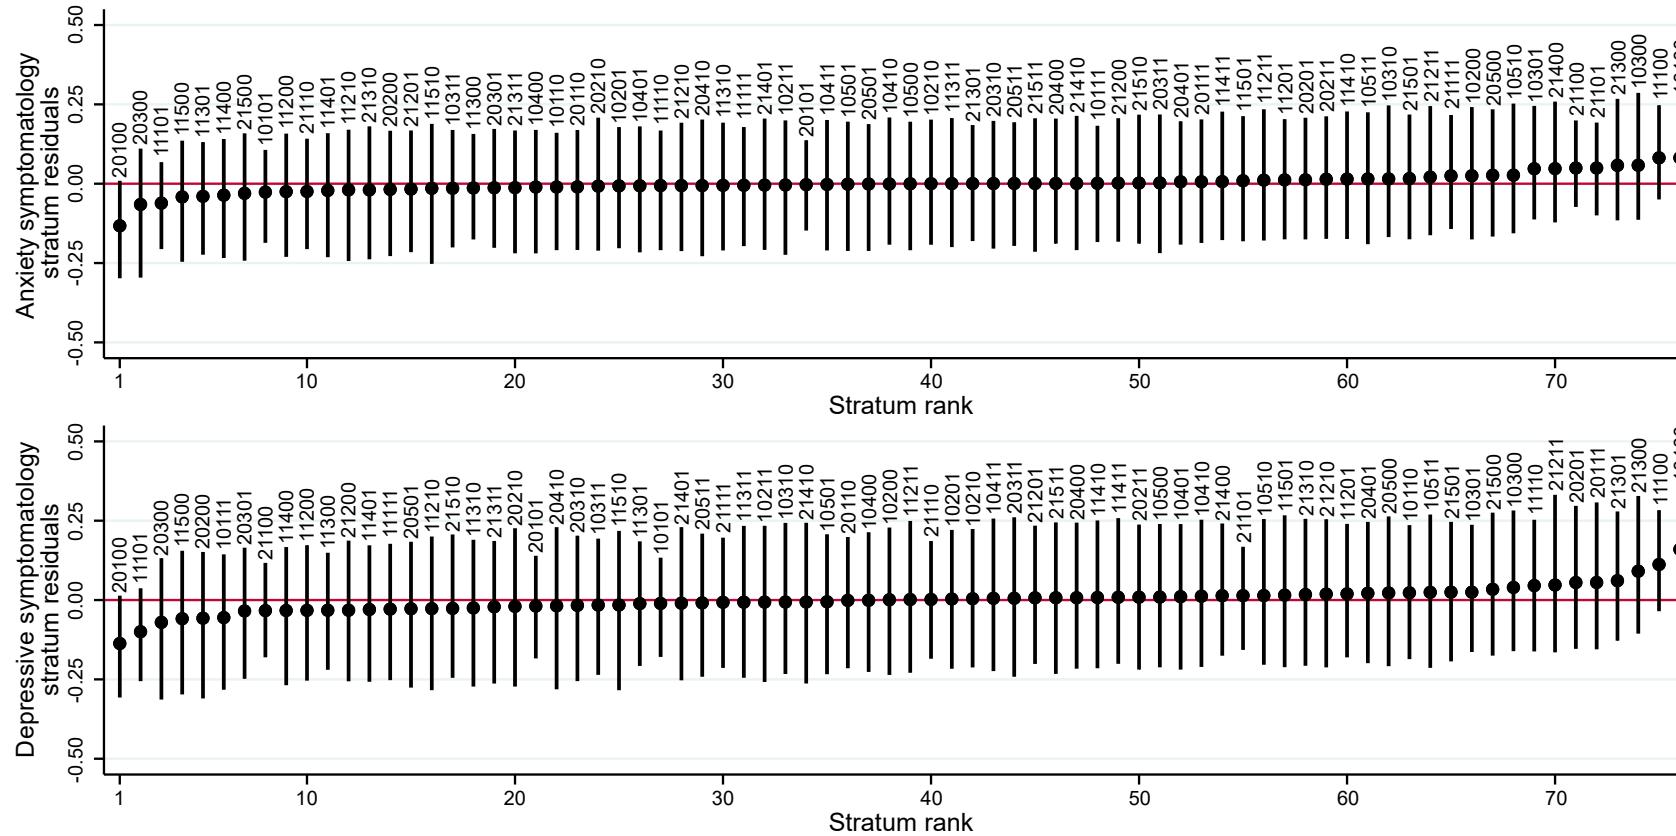

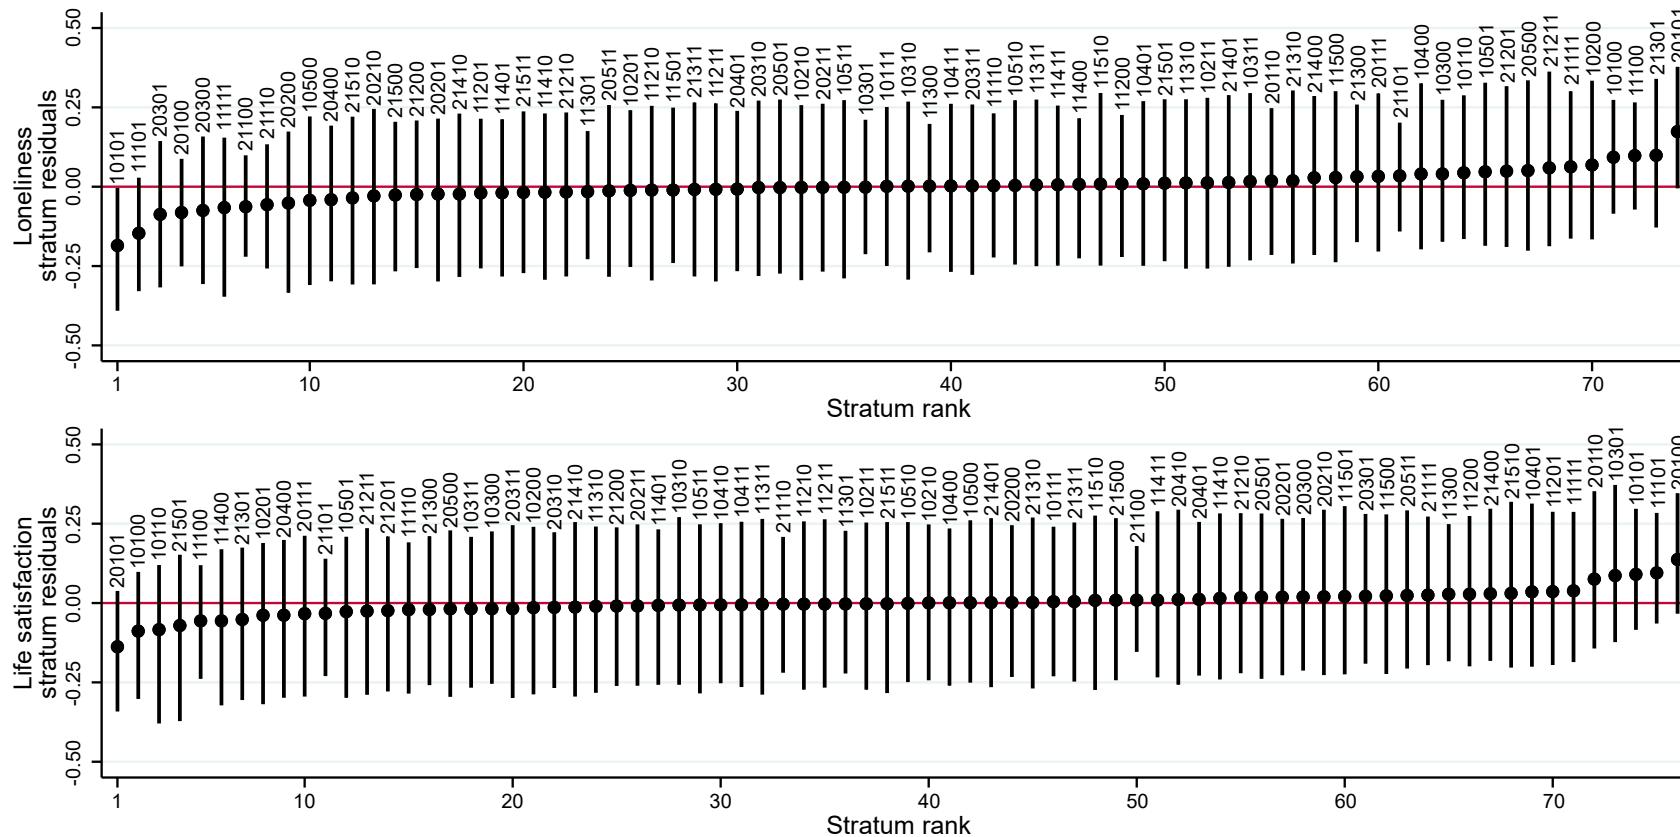

Figure S9. Anxiety and depressive symptomatology residual values (intersectional effects) and 95% credible intervals of each intersectional stratum using housing tenure as the indicator of socioeconomic position. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

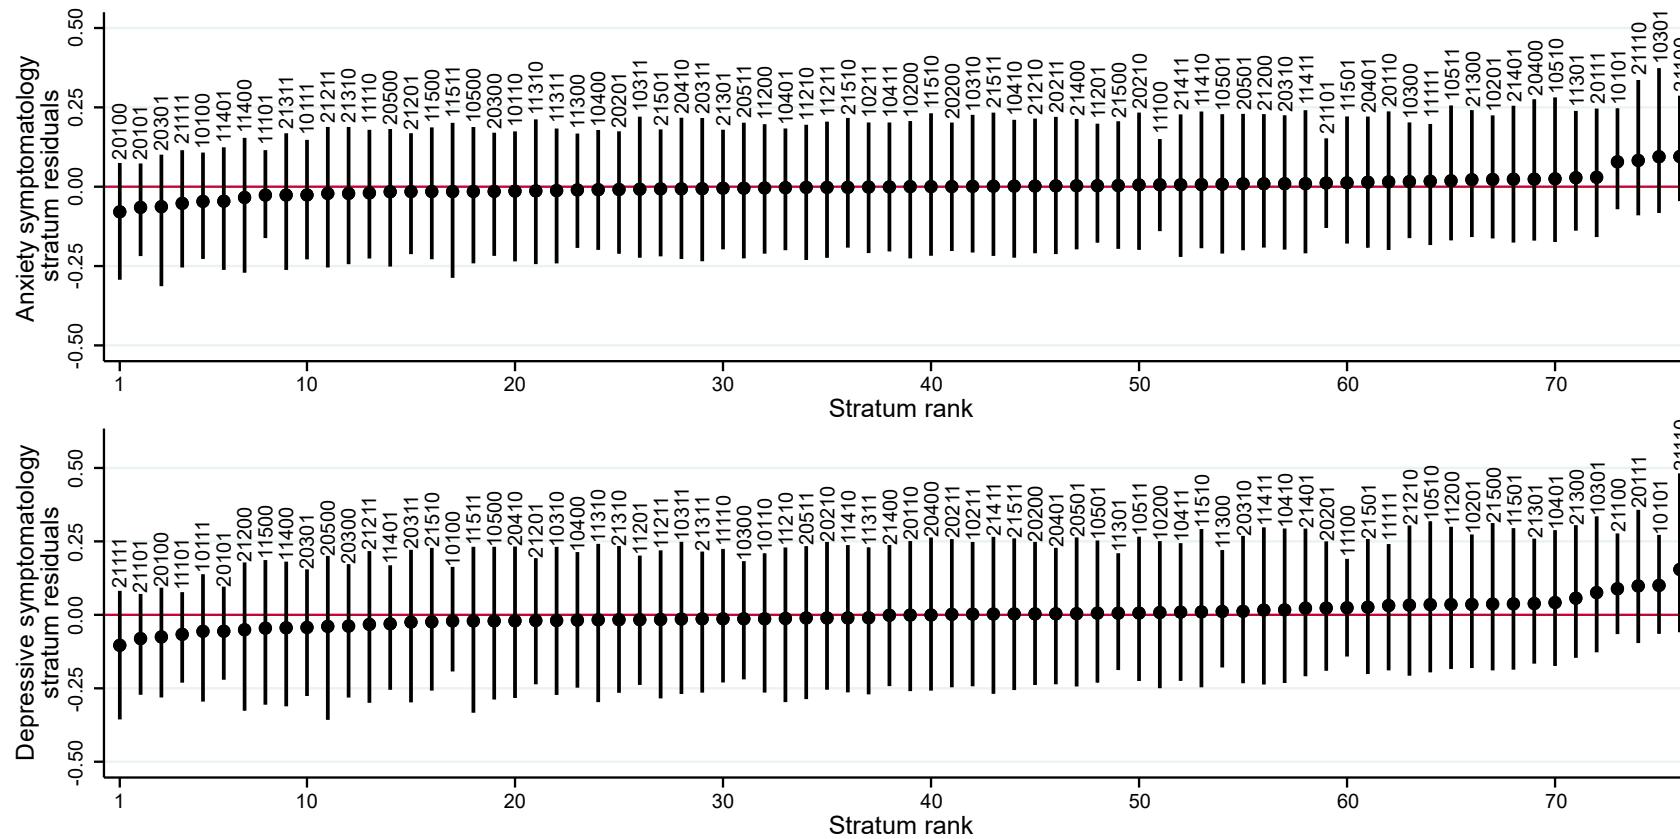

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), housing tenure (fifth digit: 0 Not homeowner, 1 Homeowner/part owner).

Figure S10. Loneliness and life satisfaction residual values (intersectional effects) and 95% credible intervals of each intersectional stratum using housing tenure as the indicator of socioeconomic position. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

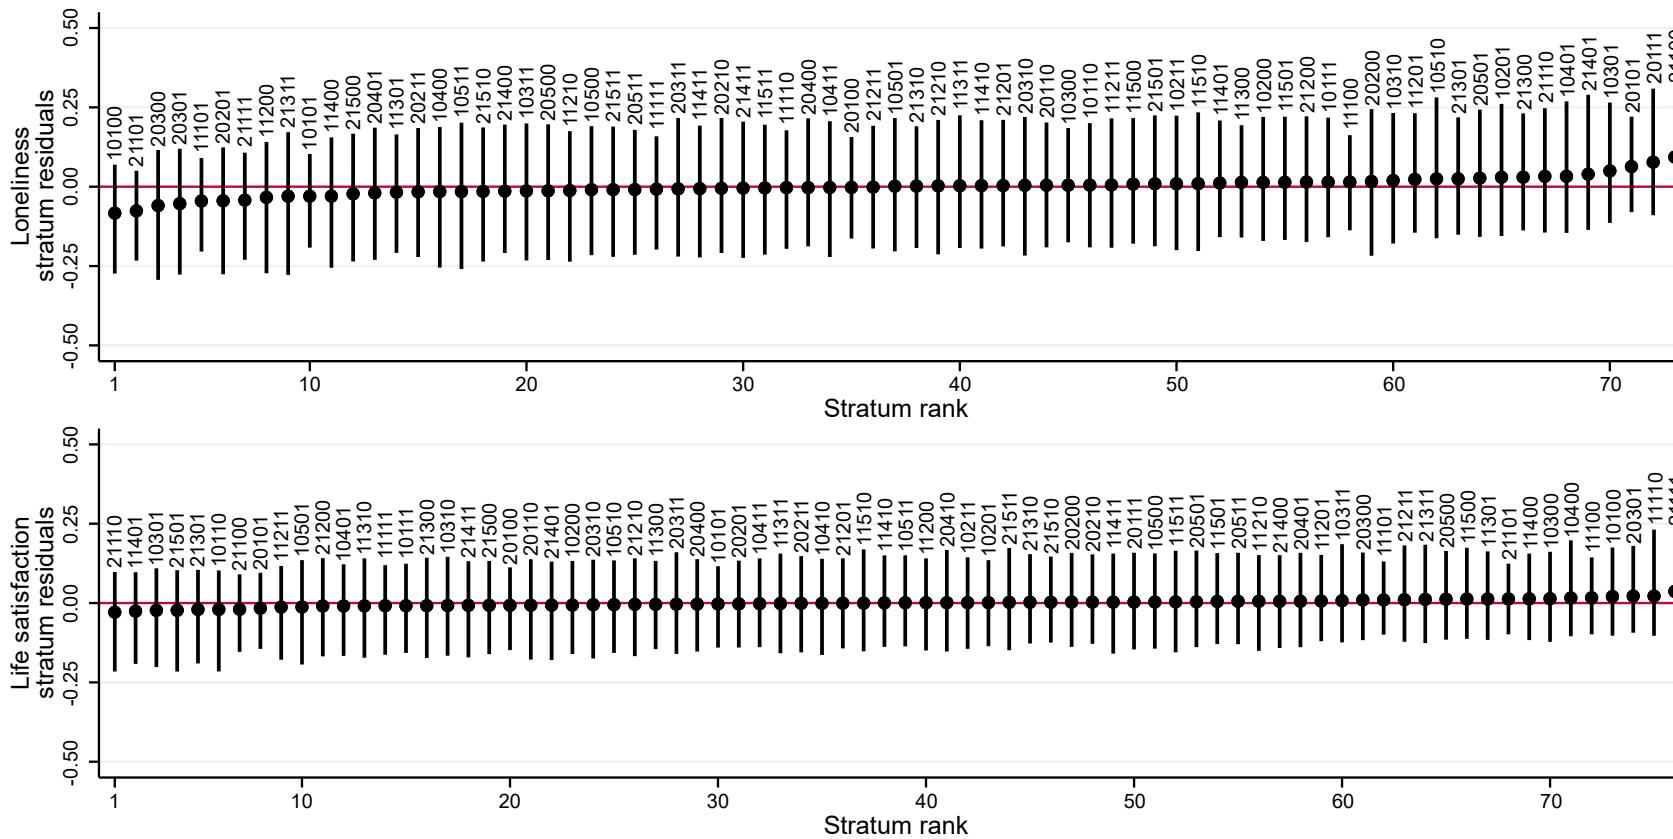

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), housing tenure (fifth digit: 0 Not homeowner, 1 Homeowner/part owner).

Figure S11. Anxiety and depressive symptomatology residual values (intersectional effects) and 95% credible intervals of each intersectional stratum using parental social class during childhood as the indicator of socioeconomic position. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

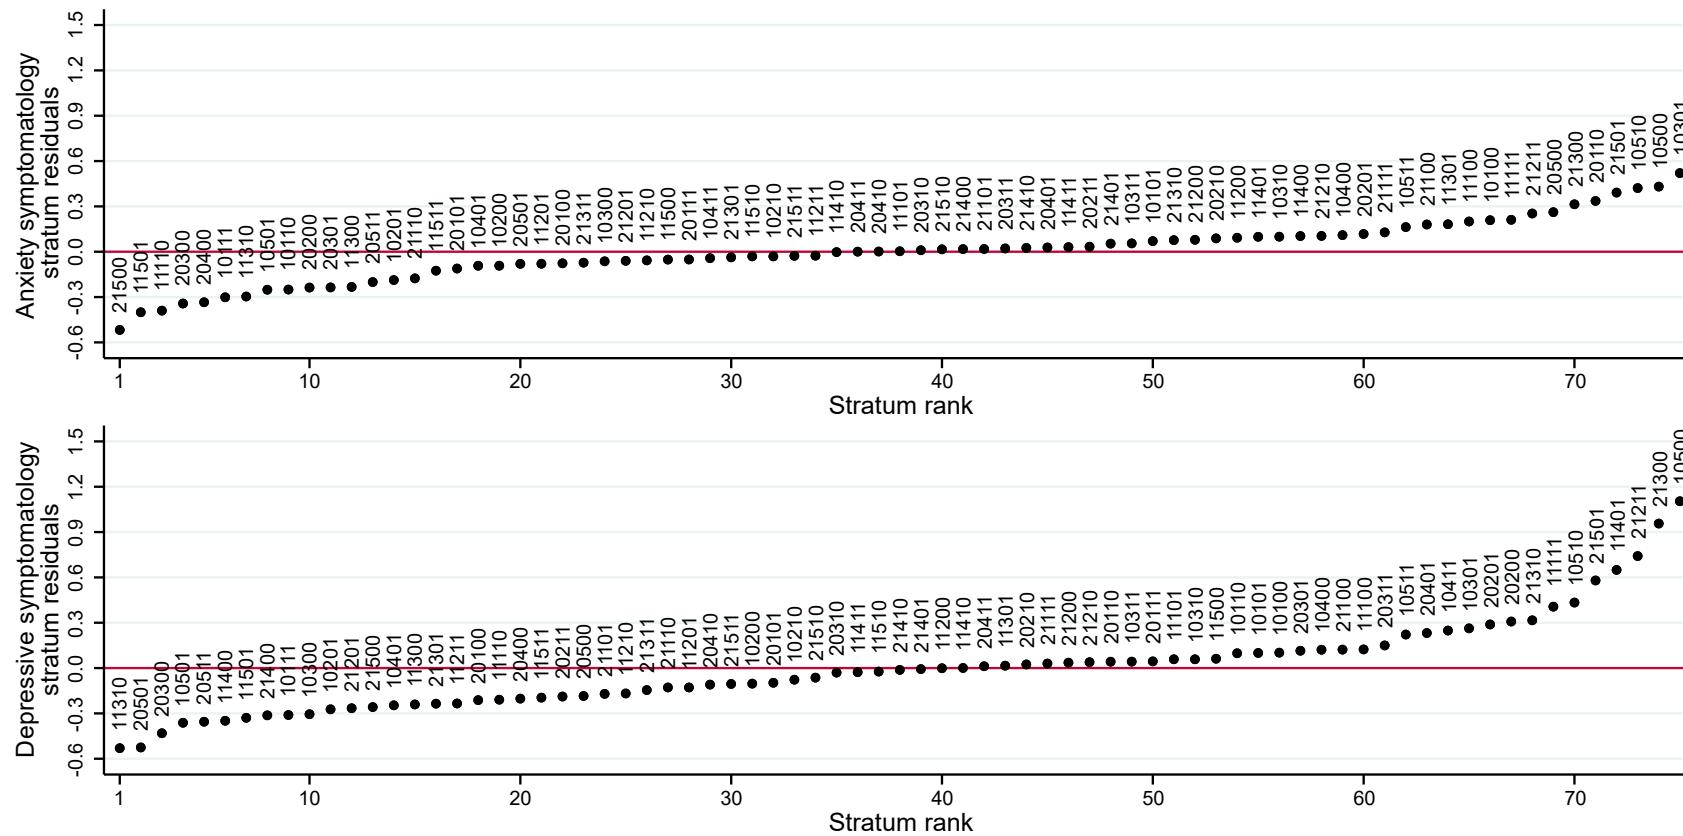

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), parental social class during childhood (fifth digit 0 Disadvantaged, 1 Advantaged).

Figure S12. Loneliness and life satisfaction residual values (intersectional effects) and 95% credible intervals of each intersectional stratum using parental social class during childhood as the indicator of socioeconomic position. Markov Chain Monte Carlo (MCMC) estimation, unweighted results.

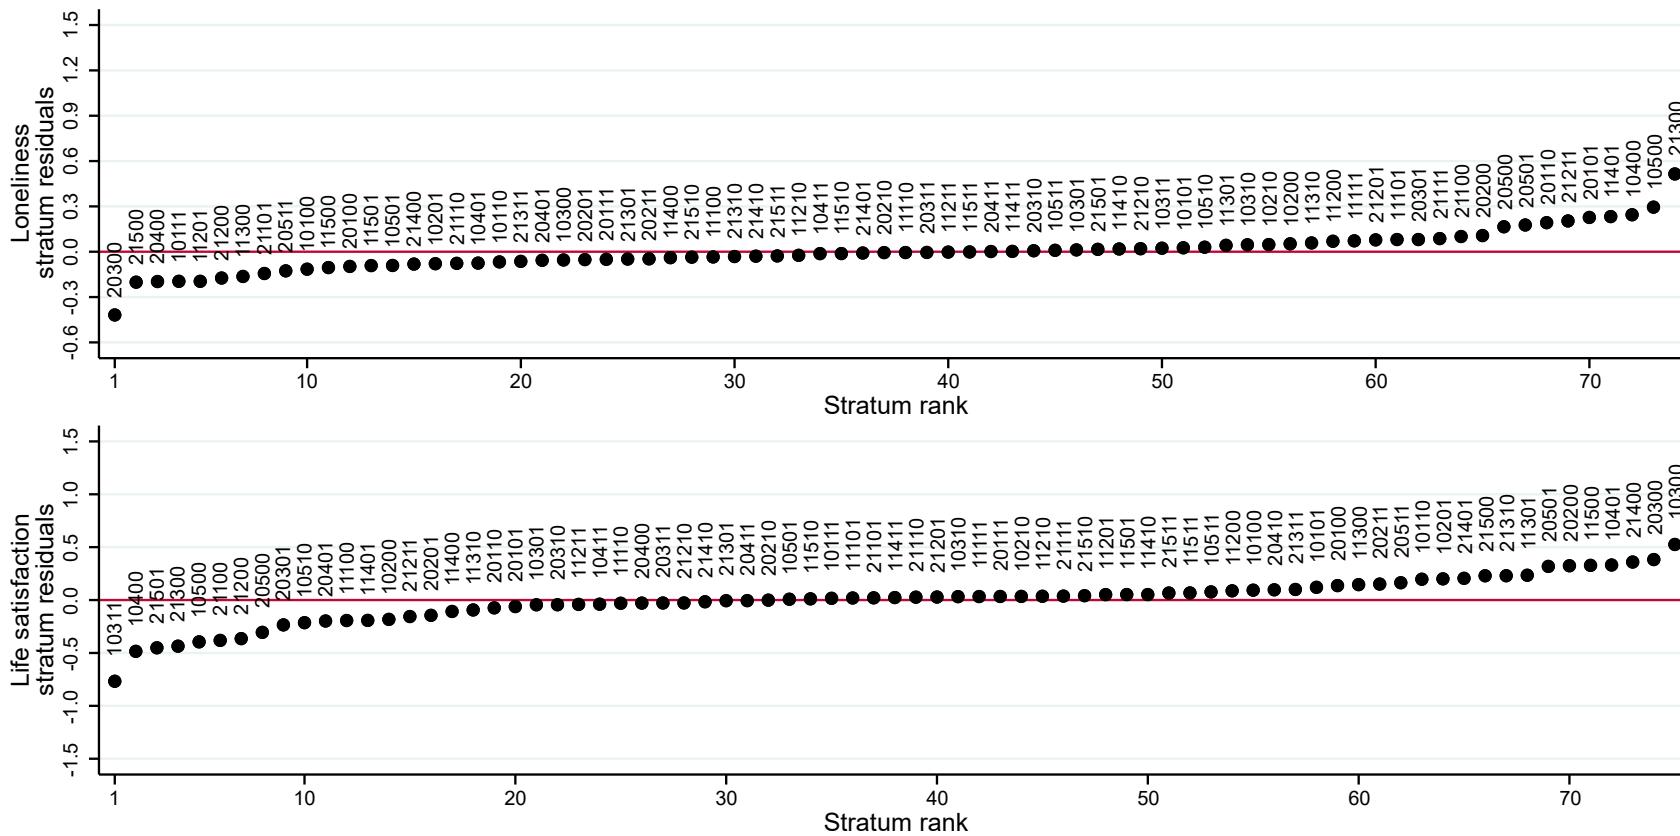

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), parental social class during childhood (fifth digit 0 Disadvantaged, 1 Advantaged).

Figure S13. Anxiety and depressive symptomatology residual values (intersectional effects) using residential Index of Multiple Deprivation (IMD) rank as the indicator of socioeconomic position. Maximum likelihood estimation, weighted (survey design and non-response) results.

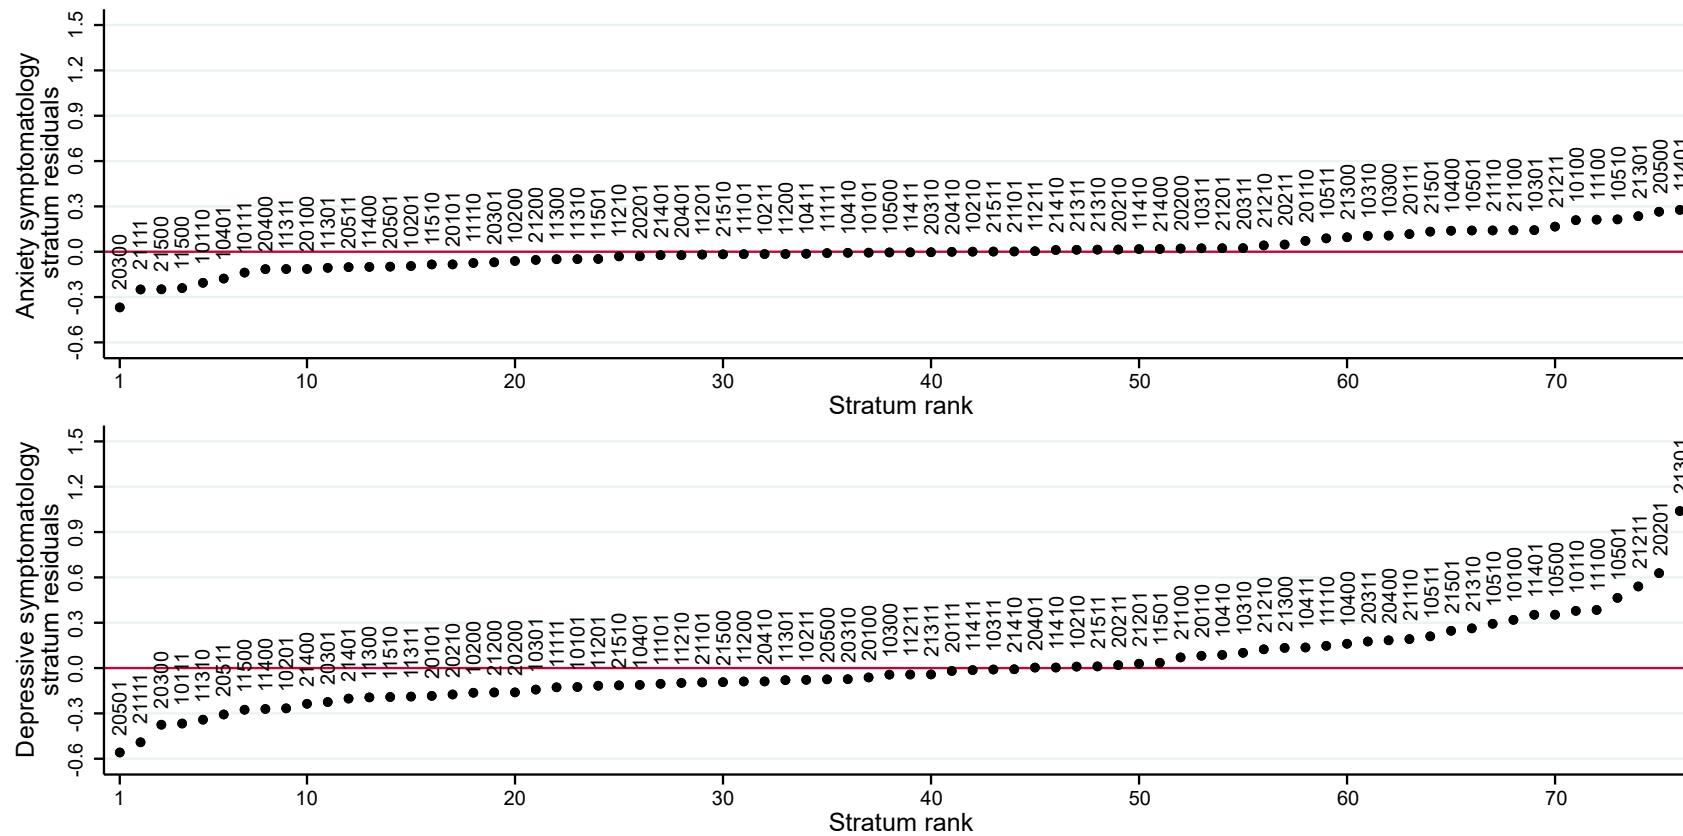

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), residential IMD rank (fifth digit: 0 More deprived, 1 Less deprived).

Figure S14. Loneliness and life satisfaction residual values (intersectional effects) using residential Index of Multiple Deprivation (IMD) rank as the indicator of socioeconomic position. Maximum likelihood estimation, weighted (survey design and non-response) results.

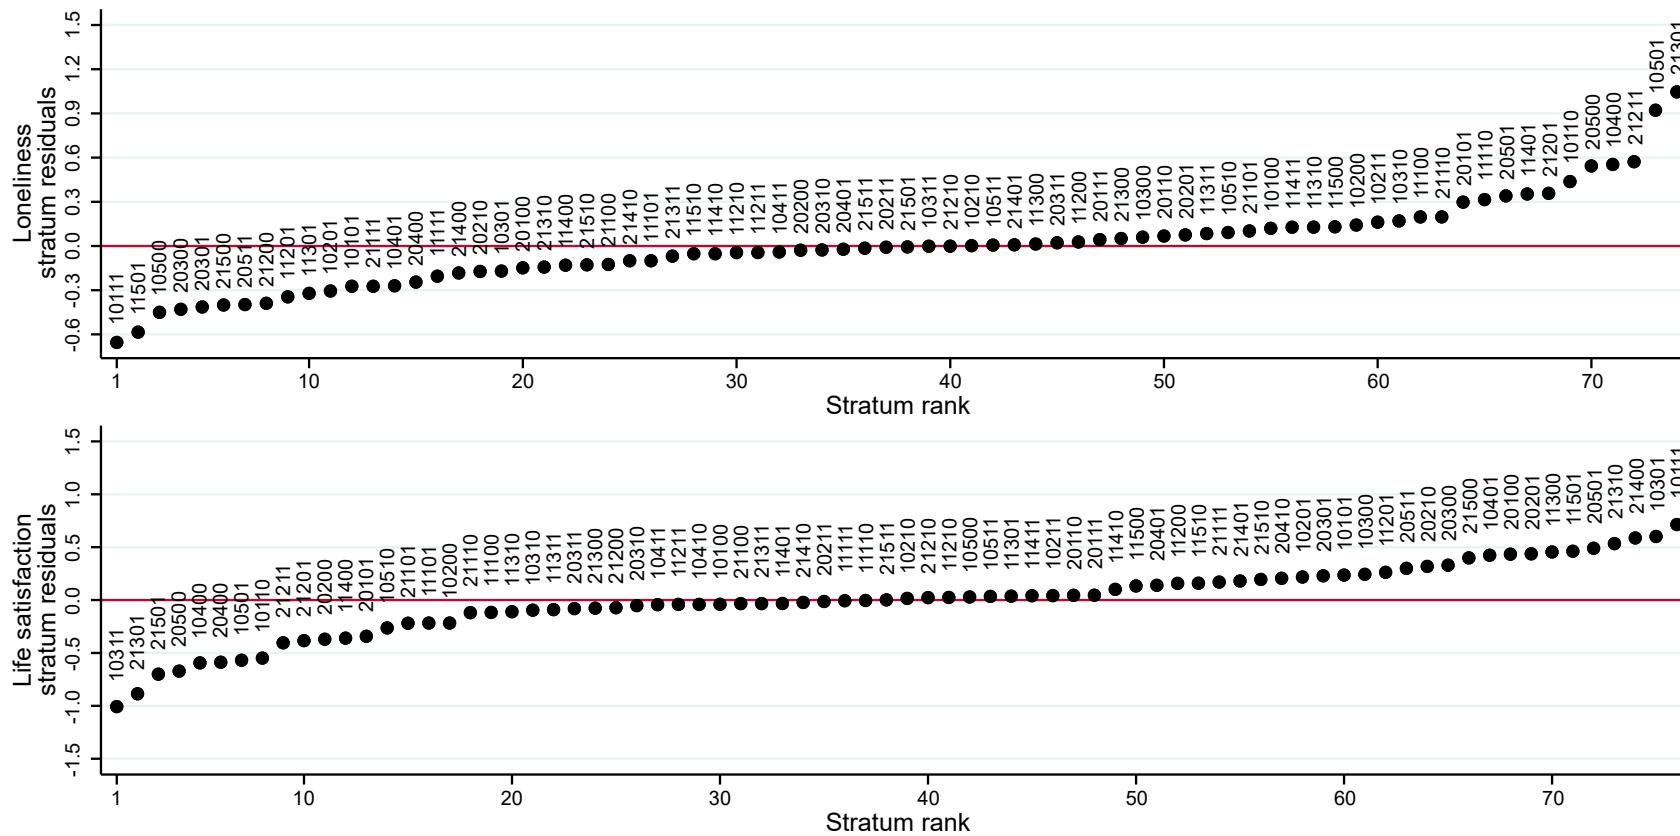

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), residential IMD rank (fifth digit: 0 More deprived, 1 Less deprived).

Figure S15. Anxiety and depressive symptomatology residual values (intersectional effects) using housing tenure as the indicator of socioeconomic position. Maximum likelihood estimation, weighted (survey design and non-response) results.

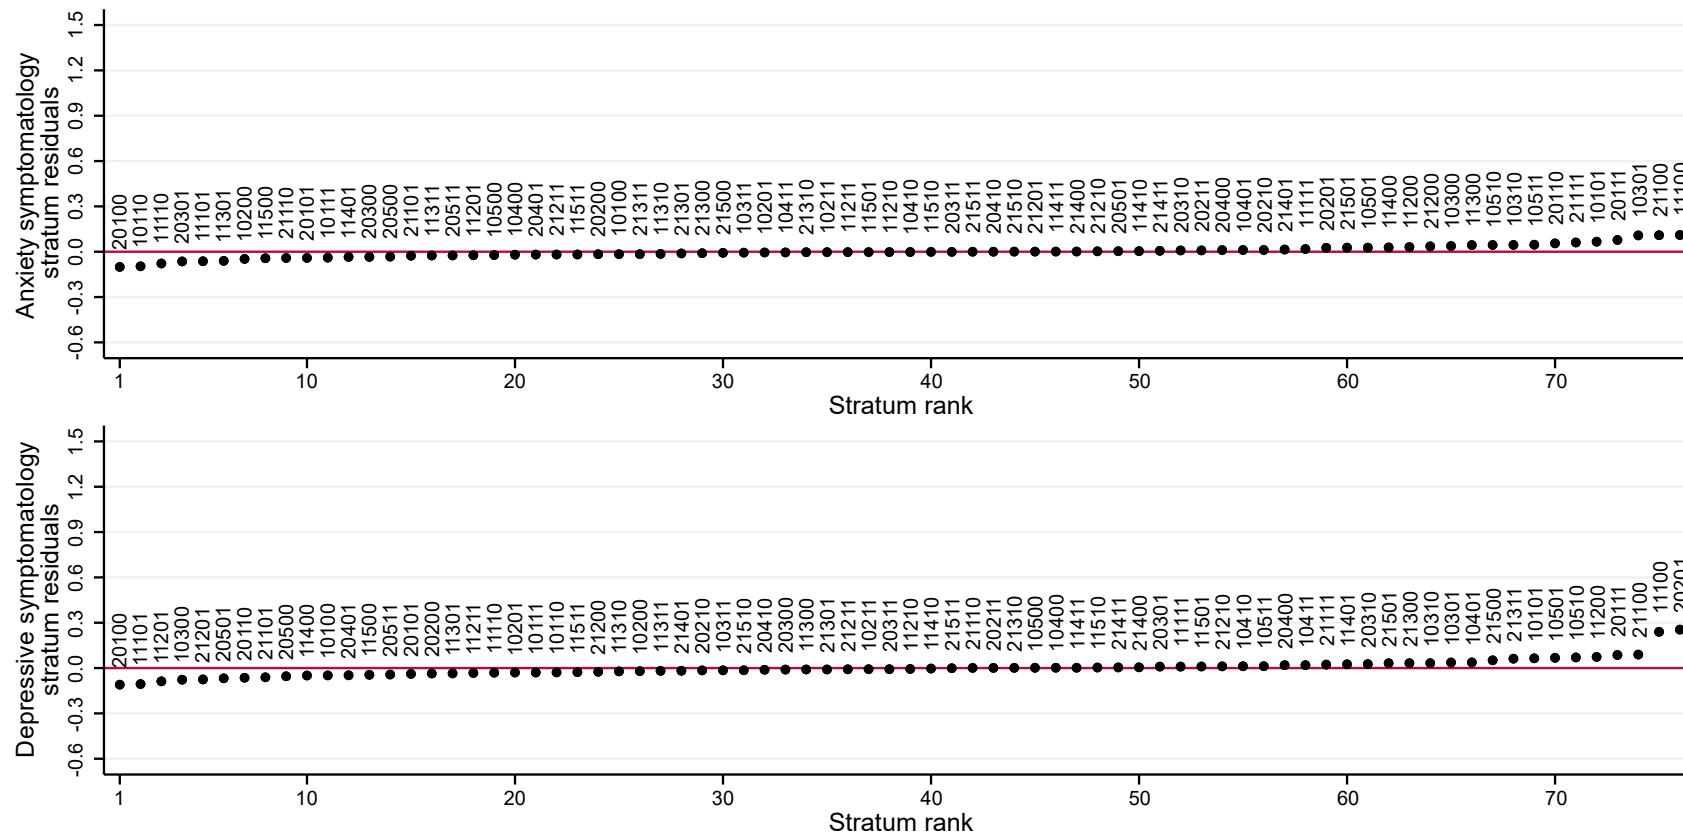

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), housing tenure (fifth digit: 0 Not homeowner, 1 Homeowner/part owner).

Figure S16. Loneliness and life satisfaction residual values (intersectional effects) using housing tenure as the indicator of socioeconomic position. Maximum likelihood estimation, weighted (survey design and non-response) results.

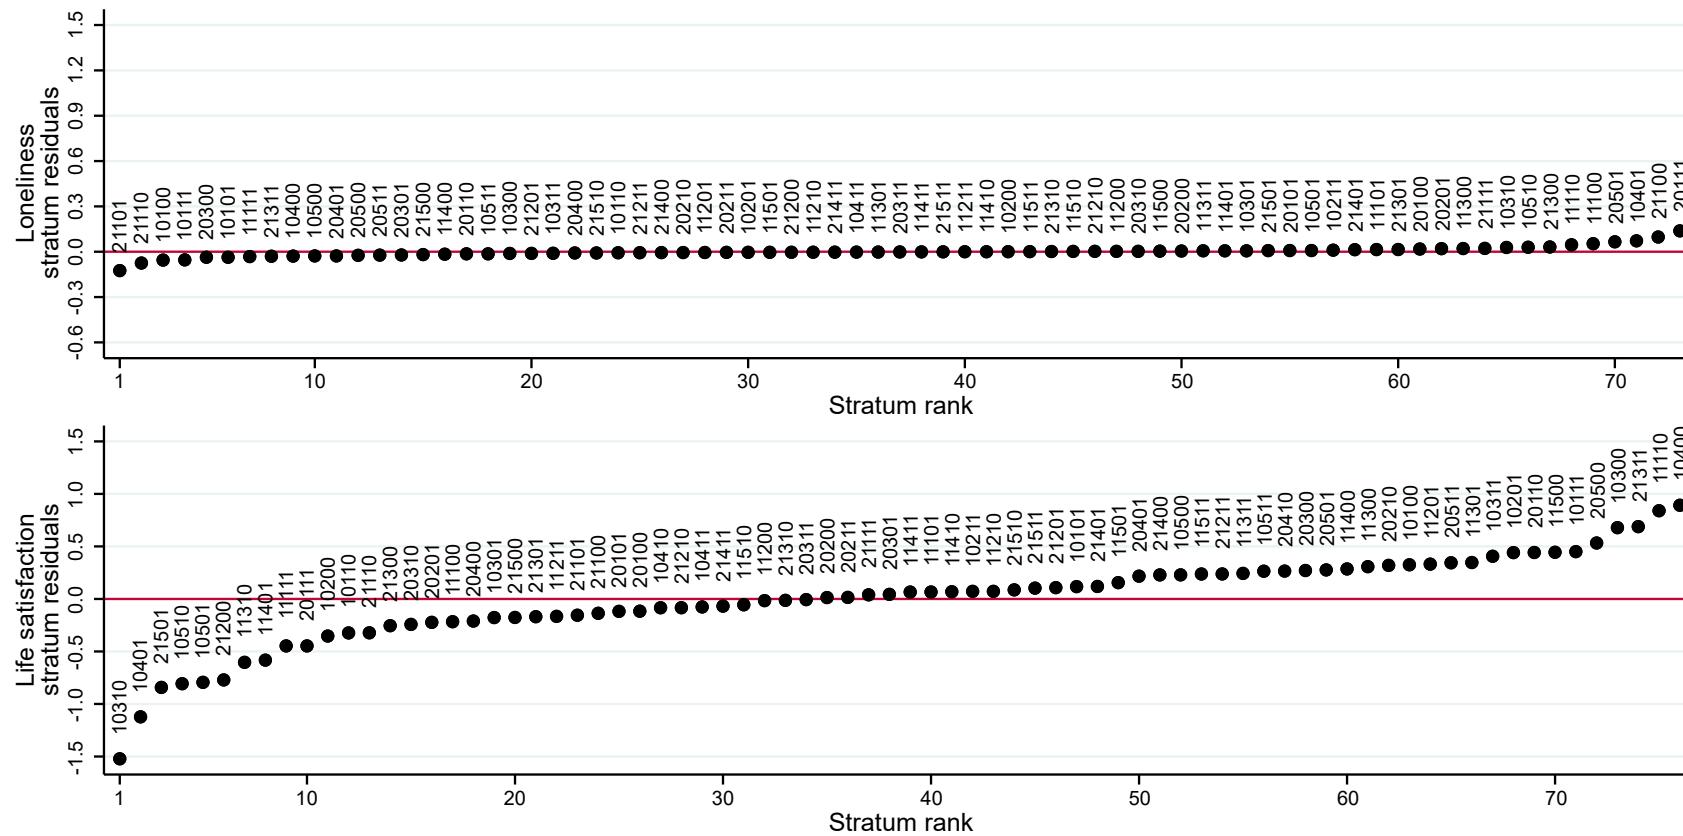

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), housing tenure (fifth digit: 0 Not homeowner, 1 Homeowner/part owner).

Figure S17. Anxiety and depressive symptomatology residual values (intersectional effects) using parental social class during childhood as the indicator of socioeconomic position. Maximum likelihood estimation, weighted (survey design and non-response) results.

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), parental social class during childhood (fifth digit: 0 Disadvantaged, 1 Advantaged).

Figure S18. Loneliness and life satisfaction residual values (intersectional effects) using parental social class during childhood as the indicator of socioeconomic position. Maximum likelihood estimation, weighted (survey design and non-response) results.

Strata defined by generation/cohort (first digit: 1 Next Steps/1990, 2 Millennium Cohort Study/2000-2002), birth sex (second digit: 0 Male, 1 Female), ethnicity (third digit: 1 White, 2 Mixed, 3 South Asian, 4 Black, 5 Other), sexual orientation (fourth digit: 0 Heterosexual, 1 Sexual minority), parental social class during childhood (fifth digit: 0 Disadvantaged, 1 Advantaged).
