

Domain Vocabularies for Semantic Interoperability of Museum Collections

Dr Andreas Vlachidis and Dr Daniele Metilli

UCL Department of Information Studies

a.vlachidis@ucl.ac.uk

d.metilli@ucl.ac.uk

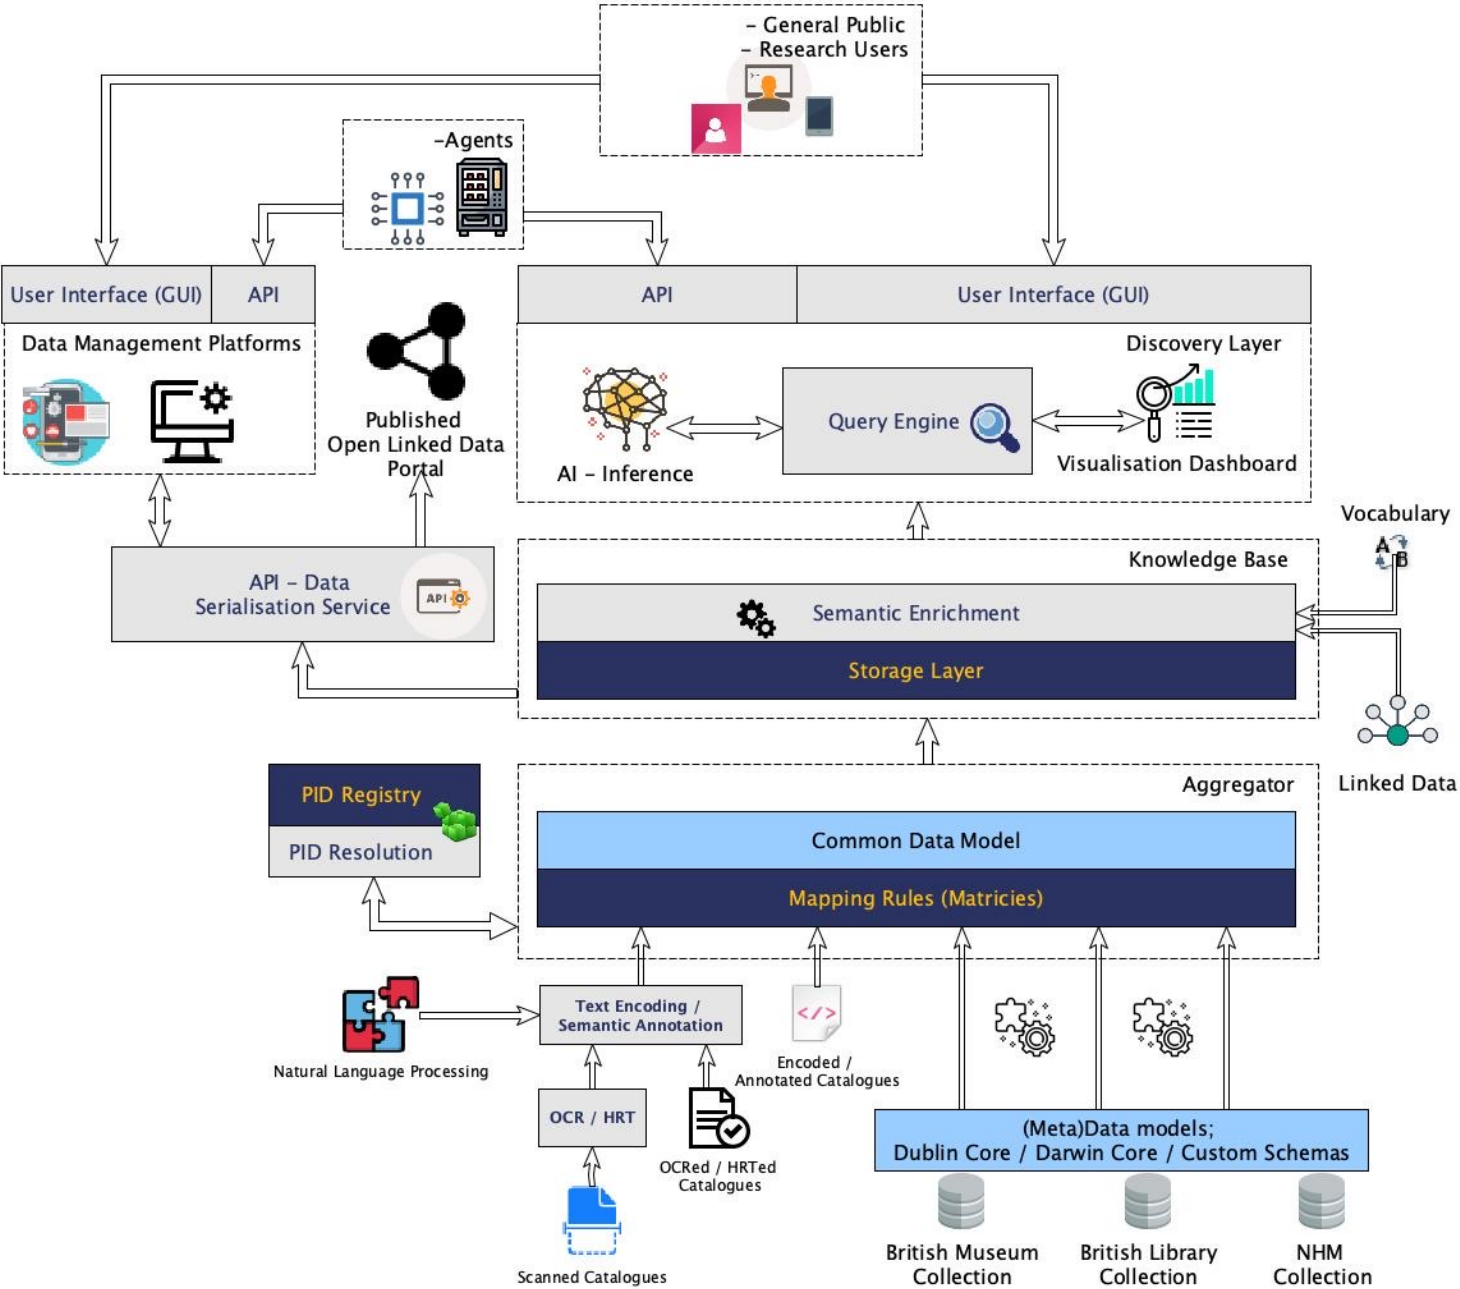

The Sloane Lab

Sloane an **exemplary case study** to unite surviving objects (current digital collections) and records across the NHM, BM and BL from the original catalogues

Reunify and extend digital collection
 Searchable and amenable to further analysis and interpretation

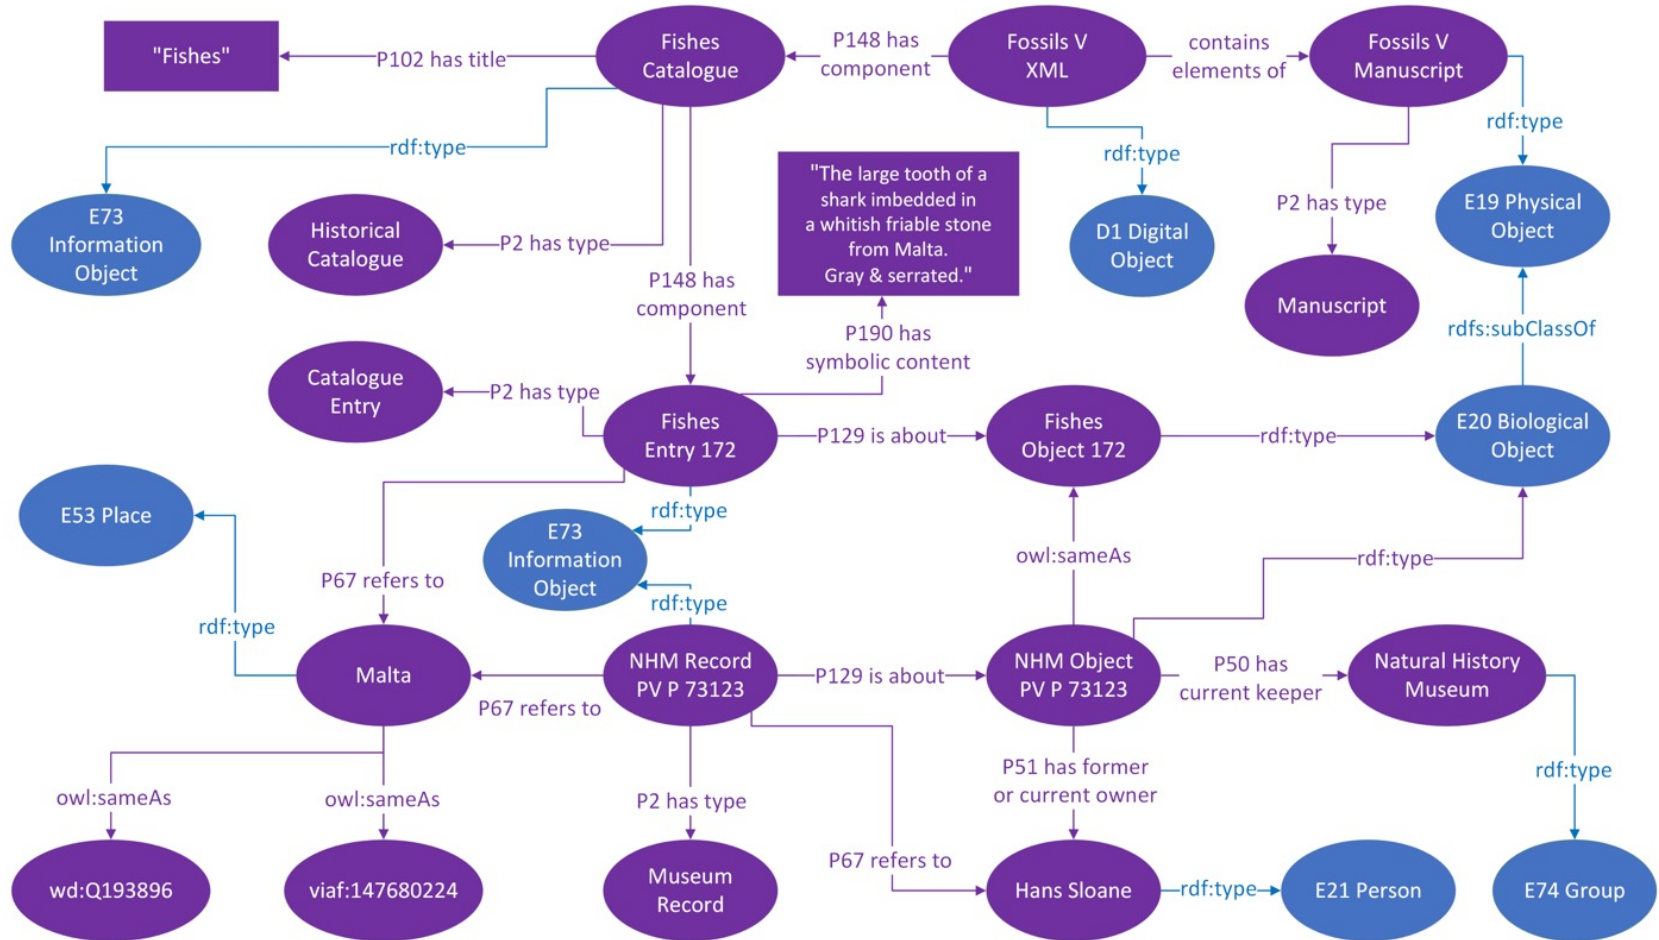

Infrastructure

Data Model

- The **Sloane Lab data model** allows us to represent the **knowledge** collected in the project
- Based on **Semantic Web** standards and built on top of the **CIDOC CRM** reference model
- Centred on the **record** instead of the **object**, to support multiple perspectives over the same object

Fishes Entry 172 — “The large tooth of a shark”
object with a Natural History Museum record

Vocabularies for Semantic Interoperability

- Authority Lists for NLP on historical catalogues
- Aim: Automatically recognise Place and Person entities in Sloane catalogues, using rule-based Name Entity Recognition techniques, supported by input from British Museum Named Authority files
- Integrate the output into the provided TEI scheme

The Framework

The NER Pipeline

Catalogue (Input)

	Validate	JAPE Transducer

TEI (output)

<?xml?>

Named Authority Files

- British Museum Place names (49,382 entries)
 - 55 Attributes
- British Museum Person names (initially 215,186 entries)
 - Refined to 126,018 (cut off date 1799)
 - 80 Attributes

System ID	Place name	Place type	Authority Type	Broader Terms	Terminology	Scope Note	Source	Amendment history - user	Amendment history - date

Challenges

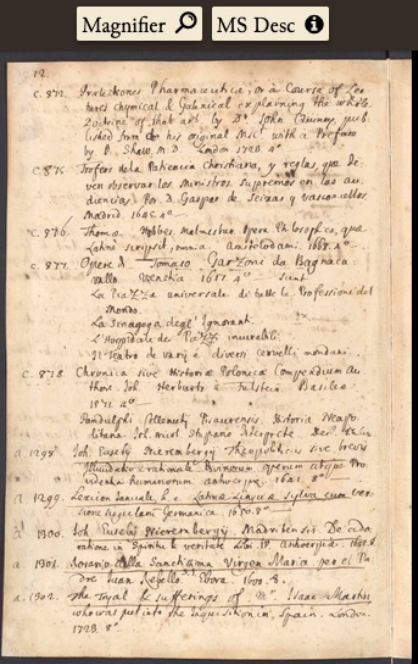

- Domain Independent
 - Know limitations of NER (maximum accuracy)
 - Toponymical Polysemy
 - When a place name is a surname!
 - What about “Duke of Edinburgh”
- Domain Dependent
 - Particularly relating to sentence structure
 - Hyphenation and the whole world matching apparatus
- Vocabulary Related
 - Authority Files are not built for NLP
 - coverage and suitability
 - Person names and Organisation and Unknown in one List
 - Multiple Entries (Madrid as a City and as a Province)
 - Person name Synonymy

Natural History Museum - Vocabularies

- Biological Collection Access Service (BioCAsE)
 - for describing collections
 - <https://www.biocase.org>
- International Plant Names Index
 - Nomenclatural data for the scientific names of vascular plants from family to infraspecific ranks
 - <https://www.ipni.org/>
- In-house Glossaries
 - Record Type
 - specimen, artefact, tissue prep, bound volume etc.
 - Kind
 - Sheet, photograph, microscope slide, box

Challenges

- Different institutions adopt different vocabularies
- Different levels of openness and adoption of standards, different attitudes toward making vocabularies public
- External resources (e.g., AAT) are readily available but not controlled by partner institutions
- Reconciliation of different authority files and vocabularies is complex

Conclusions

- Vocabularies provide a common conceptual layer of high-level semantics for the purposes of unification, alignment and harmonisation
- Important role of museum-based vocabulary resources towards the realisation of unified collections
- Big opportunities for semantic enrichment, linking and interoperability, but also many challenges
