

SUPPLEMENTARY APPENDIX

Supplement to: Heerspink HJL Arihiro Kiyosue, David C Wheeler et al. Zibotentan in combination with dapagliflozin compared to dapagliflozin alone in patients with chronic kidney disease: A randomised active-controlled clinical trial

Table of contents:

Table 1: Laboratory assessments

Figure 1: Forest plot showing adjusted percentage mean change from baseline (90%CI) overall, by type 2 diabetes status and by baseline eGFR for Zibotentan 0.25 mg/dapagliflozin 10 mg and Zibotentan 1·5 mg/dapagliflozin 10 mg.

Figure 2: Kaplan Meier curve of fluid related events by treatment group in part A of the study. Changes from baseline in mean body weight and median BNP are presented by treatment group below the Kaplan Meier curve.

Figure 3: Scatterplot showing log of the ratio to baseline in UACR and change from baseline in systolic blood pressure at week 12, by treatment group. There was no correlation between changes from week 12 in UACR and SBP during the wash-out period at week 14. There was also no correlation between changes from baseline in diastolic blood pressure and UACR at week 12.

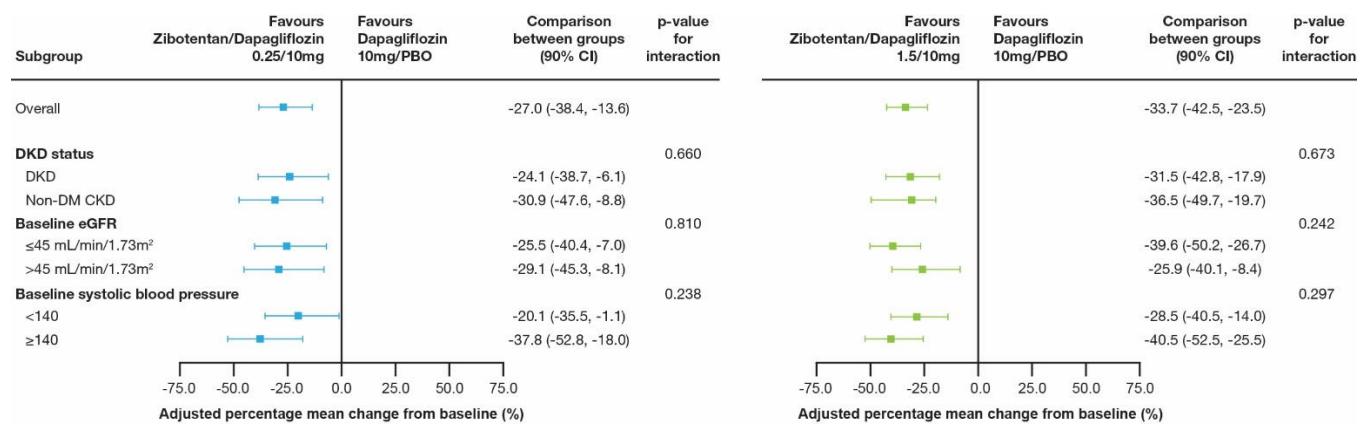

Supplementary Table 1: Laboratory assessments

Variable	Time	Dapagliflozin /placebo		Zibotentan 0.25 mg/day / Dapagliflozin		Zibotentan 1.5 mg/day / Dapagliflozin	
		Week	n	Mean (SD) or median	n	Mean (SD) or median	n
UACR, median, mg/g	Baseline	177	577·0	91	526·7	178	566·8
	3	147	461·0	84	251·9	157	271·1
	6	149	464·5	82	325·3	148	232·2
	12	143	445·5	73	342·5	134	289·1
	Follow-up	142	570·6	74	506·0	134	527·9
SBP, mmHg	Baseline	177	137·6 (17·59)	91	136·5 (17·76)	179	136·4 (16·13)
