# Correction to: The prognosis in palliative care study II (PiPS2): study protocol for a multi-centre, prospective, observational, cohort study

Anastasia K. Kalpakidou<sup>1</sup>, Chris Todd<sup>2</sup>, Vaughan Keeley<sup>3</sup>, Jane Griffiths<sup>2</sup>, Karen Spencer<sup>2</sup>, Victoria Vickerstaff<sup>1</sup>, Rumana Z. Omar<sup>4</sup> and Patrick Stone<sup>1\*</sup>

## Correction

After publication, the authors noticed some minor errors in “Nested qualitative sub-study” section, first paragraph of the section, page 7 of the published article. These may cause some confusion to the readers when the results of the qualitative sub-study are published [1].

Please see below for details (the new text has been added in bold and the incorrect text has been underlined).

“**It was anticipated that** semi-structured, face to face interviews were **would need to be** conducted with a purposive sample of approximately 15 patients, 15 carers and 15 clinicians to determine the acceptability of using prognostic indicators, and barriers and facilitators to clinicians’ use. **It was recognised that**, data saturation will **would** determine the final sample sizes, which may be larger or smaller than anticipated. To date, 28 patients, 19 carers and 32 clinicians were **have been** enrolled in the qualitative sub-study.”
