Figure 1. Progressive structural and perfusional changes are seen in the macula of glaucomatous eyes. The images show a decrease in macular vessel density and GCC (μm) with advancing stages of glaucoma. The legend indicates statistical significance levels: *p<5% Within Norm, **p<5% Borderline, ***p<1% Outside Norm.
Figure 2. Reduced RNFL thickness is seen at the optic disc in glaucoma

A

Normal

Mild

Moderate

Advance

B

RNFL (μm)

Normal Mild Moderate Advance
Figure 3. OCTA measurements correlate with visual function in glaucoma

A  $p < 0.0001, r = 0.6$

B  $p = 0.008, r = 0.36$

C  $p = 0.0006, r = 0.3$
