Supplemental Methods

Population structure analysis

Population structure was assessed using multidimensional scaling, in PLINK (using default parameters as suggested by the authors of PLINK) [1]. The procedure used for UK Biobank has been described in the data release documentation [2, 3].

UK Biobank participants were genotyped using either the Affymetrix UK Biobank Axion or the Affymetrix BiLEVE Axion array [3]. A modified version of SHAPEIT2 was used for phasing and IMPUTE2 for imputation. The data from UK Biobank was released in two phases. The UK Biobank was imputed to the 1000 Genomes, UK10K haplotype (first release) and Haplotype Reference Consortium (merged with the first release for the second release) reference panels [2].
