Incidence of childhood renal tumours: an international population-based study
Kayo Nakata, Murielle Colombet, Charles A. Stiller, Kathy Pritchard-Jones and Eva Stelianova-Foucher on behalf of IICC-3 contributors

Table of contents

Table S1. Classification of the renal tumours included in this study, according to the International Classification of Childhood Cancer, edition 3, update 2017 (ICCC-3-2017), group VI - Renal tumours.
Table S2. Overview of the data contributed by the individual cancer registries to the analyses of incidence of renal tumours.
Table S3. Distribution of renal tumours by type, single year of age, world region and ethnicity, 2001-2010.
Table S4. Time trends in the incidence of renal tumours in children aged 0-14 years by world region, ethnicity and tumour type, 1996-2010.
Table S5. Age-standardised incidence rates (ASRs) of renal tumours in children aged 0-14 years in the selected registries contributing to all three volumes of the International Incidence of Childhood Cancer (IICC) study.
Table S6. Comparison of incidence of renal tumours in children aged 0-14 years in the 1970s, 1980s, and 2000s, using the three volumes of the International Incidence of Childhood Cancer (IICC) study.
Figure S1. Age-standardised incidence rates (ASRs) of Wilms tumour in children aged 0-14 years, by sex, world region and ethnicity, 2001-2010 (N=13,838,733).
Figure S2. Distribution of renal tumours by type, single year of age, world region and ethnicity, 2001-2010.
Figure S3. Age-specific incidence of Wilms tumour in children aged 0-14 years, by world region and ethnicity, 2001-2010 (N=13,838,733).
Figure S1. Age-standardised incidence rates (ASRs) of Wilms tumour in children aged 0-14 years, by sex, world region and ethnicity, 2001-2010 (N=13,838). The bar labels show the age-standardised incidence rates (ASRs). The registries’ contribution to the analyses is shown in Table S2.
