In this article, we are delighted to publish the names of the 780 peer reviewers who submitted reviews in 2022 (italicized names have contributed 3 or more reviews). We express our deep appreciation for your thoughtful comments and suggestions on manuscripts submitted to Earth's Future. Your scholarly assessments were fundamental to our decisions, and significantly improved the quality of the published papers.

As a transdisciplinary journal, Earth's Future examines the state of the planet and its inhabitants, sustainable, and resilient societies, the science of the Anthropocene, and predictions of our common future through research articles, reviews, and commentaries. Given the observed and expected global environmental and climatic changes, more than ever, we need high quality scientific theories, assessments, and projections about the future of our planet. To ensure the integrity of research in this area, we rely on your expertise and unselfish cooperation. We will need your help in 2023 and beyond.
