

| Location             | Quartz grain type | Description  | Photograph A  | Photograph B   | Photograph C   |
|----------------------|-------------------|--|---|--|--|
| Alibi site           | Type I            | <ul style="list-style-type: none"> <li>• Sub-angular strained quartz (A)</li> <li>• No mechanical edge abrasion,</li> <li>• Chemical post depositional precipitation,</li> <li>• Metamorphic features (elongates, bent &amp; heart shaped grains (B&amp;C))</li> </ul>     |   |   |   |
| Murder scene         | Type II           | <ul style="list-style-type: none"> <li>• Sub-round/Round</li> <li>• Extensive chemical precipitation masking almost all features apart from old conchoidals and breakage blocks (A)</li> <li>• Filaments evidence on many surfaces (B&amp;C)</li> </ul>                    |   |   |   |
| Body deposition site | Type III          | <ul style="list-style-type: none"> <li>• Angular grains (A)</li> <li>• No edge abrasion,</li> <li>• Some surfaces dulled by smoothing caused by solution (B)</li> <li>• A number of fragments &amp; shards from a diagenetic, agglomerated sandstone source (C)</li> </ul> |  |  |  |
