## Forward

The Life Study questionnaires were developed by the scientific leadership team together with experts from a wide range of disciplines drawn from the biomedical, clinical and social science research communities who formed part of a wider affiliated scientific network. The questionnaires were designed to reflect the key research themes of the study, capitalise on the unique opportunities afforded, and to enable a wide range of research questions and policy issues relevant to children to be explored.

The Life Study questionnaires were initially developed by members of the Scientific Protocol Development Group with input from Scientific Working Groups, each co-chaired by social and biomedical scientists. Ad hoc subgroups and external experts contributed on focussed aspects. A public consultation took place on the draft protocol in July 2012, followed by an independently conducted web survey with input from a wide range of disciplines. The Life Study Scientific Steering Committee (members listed below) is responsible for the content of this questionnaire, having approved its final content and any revisions needed in the light of experience following piloting. They, and key members of the Life Study team, are listed as authors of this questionnaire.

Members of the Scientific Steering Committee:

Professor Peter Brocklehurst

Professor Simon Burgess

Professor Carol Dezateux

Professor Peter Elias

Professor Paul Elliott

Professor Alan Emond

Professor Hilary Graham

Professor Frank Kelly

Professor Kathleen Kiernan

Professor David Leon

Professor Diane Reay

Professor Anna Vignoles (chair)

## Acknowledgements

The authors acknowledge with gratitude the contributions made by members of the many advisory and working groups and individual experts to the development of the Life Study questionnaires, all of whom gave generously of their time, expertise and advice on specific questions, instruments and topics. The support of the Centre for Facilitation in using consensus methods to review and prioritise the questionnaire content is gratefully acknowledged.

## 1. Introduction

As described in the scientific protocol, Life Study was designed to include two integrated components, referred to as the Pregnancy Component and the Birth Component. The Pregnancy Component comprised a clustered sample of women recruited during pregnancy, who would be invited with their partners to attend appointments in a Life Study Centre, located in their local maternity unit. Visits to the Life Study Centres were to take place during pregnancy and again when their babies were approximately six and twelve months of age. The Birth Component comprised a UK-wide probability sample of mothers identified from birth registration records who, together with their partners, would be invited to take part in a home interview when their baby was approximately six months of age, with a follow-up web or telephone interview at twelve months of age.

The table below shows the timing of the questionnaires for mothers and partners, and in the birth component only, for non-resident fathers. The questionnaires were designed as longitudinal instruments and to enable data from the two components to be integrated while addressing some unique scientific opportunities afforded by the different components.

	Pregnancy visit	6 month visit	12 month visit
Pregnancy component	Mother questionnaire	Mother questionnaire	Mother questionnaire
	Partner questionnaire		
Birth component		Mother questionnaire	Mother questionnaire
		(Resident) Partner questionnaire	
		Non-resident father questionnaire	

The initial questionnaires of Life Study were administered using computer assisted personal interviewing (CAPI) and computer assisted self-interviewing (CASI). These computerised questionnaires were developed using SPSS Dimensions software. Mothers participating in the six and twelve month visits were also to receive a short paper questionnaire to be completed in the home setting, either before or after their visit to a Life Study Centre or home visit by fieldwork staff.

At the time of closure of Life Study in October 2015, only the Pregnancy Component pregnancy visit questionnaires had been piloted and used; the twelve month questionnaire had not been programmed in its final format and hence has not been published. The Birth Component mother and resident partner six month questionnaires had been piloted (but not updated following the pilot); the non-resident father questionnaire, while developed and published, had not been tested due to insufficient response in the pilot.

### 1.1 Structure of the questionnaires

The questionnaires were developed on a modular or topic basis, for example, Parental and Family Health, Child Sleeping and crying. Some modules had both CAPI and CASI questions, other modules were administered in either CAPI or CASI. The demographics section which gathered information about household members was always asked as CAPI. Sensitive questions, that is, questions asking about personal issues, were generally asked as CASI. Where possible, questions with open responses, which required an answer to be typed, were asked as CAPI. Where feasible the mode of administration was kept the same between the two components of the study and between sweeps, however, some differences occurred.

In both components of the study, the visit started with signing of the consent forms. The consent forms were paper based, but had an accompanying CAPI element, that enabled interviewers to record responses made and collect some additional information, for example to facilitate record linkage. In the Birth Component, in order to reduce this initial burden and give the questions seeking permissions to record linkage a context, some of these questions were embedded within the CAPI sections at relevant points.

In the Pregnancy Component, participants completed a section of CAPI which was followed by two sections of CASI, broken up by collection of biological samples and various other measurements, assessments and observational tasks. A greater proportion of questions were asked as CASI in order to maximise the throughput of participants with given staffing levels.

As the Birth Component was administered by fieldwork staff conducting interviews in a home setting, a higher proportion of the non-sensitive questions were administered as CAPI, so that rapport was built with the participant. This also had the advantage that the interviewer could manage the time taken to conduct the interview and was engaged with the participant for a greater proportion of the visit. Depending on what was most appropriate, questions of a sensitive nature were either asked as CASI or were administered as CAPI towards the end of the interview. Therefore in the Birth Component six month visit, there was an initial CAPI, followed by a section of CASI and then a final CAPI.

All the questionnaires had a defined and fixed order of questions. For any given questionnaire the module orders were defined and the questionnaires were programmed such that interviewers and participants had to work through from start to end. However, the questionnaires could be suspended at any point, for example, because the child needed attention, and recommenced at the same point.

In the Pregnancy Component, mothers and partners questionnaires were completely independent, whereas in the initial sweep of the Birth Component, mothers needed to complete the questionnaire before their partner, as various responses, such as information about household members, were then fed from the mother's questionnaire into the partner's questionnaire.

The following sections of the introduction explain the format of the questionnaire as presented in the tables in the rest of this document.

## 1.2 Variable labels and names

The variable label is shown in the tables in the column headed "Variable". The variable name is presented underneath the variable label within brackets, [ ].

Each question has a unique variable name, specified according the 'Life Study variable names' document. The route variable name is shown in this document. Within the datasets, this route variable name has a number of prefixes and suffixes added, for example to denote the respondent and sweep.

The route variable names were derived from the focus of the question and are generally eight characters long but sometimes less, if the variable name is meaningful. The minimum number of characters is four. The use of numbers within the route variable name is generally avoided; the exceptions relate to a series of questions within a recognised instrument. All route variable names start with an upper case letter. This document shows the following charters are a mix of upper and lower case characters, however, within the datasets, we plan to transform these, so that just the initial letter is in upper case.

## 1.3 Source of the question

Most of the Life Study questions are taken from existing surveys and instruments. Very few of the Life Study questions are new. The source of each question is shown in this document. Some questions may have been used in a number of other cohort studies or surveys and at multiple sweeps. When the Life Study questionnaires were developed, experts often recommended a specific cohort or survey as a reference. Life Study staff did not have sufficient time to follow-up the full provenance of each question, so what is listed, is the origin of the question that was used by the Life Study team.

Some questions needed to be modified or adapted to make them suitable for use in Life Study. Where this was the case, the origin says “Adapted from”.

#### 1.4 Question

The “Question” column gives details of the wording of each question. If the question is administered as CAPI, then this is what is read out by the interviewer. If the question is administered as CASI, then this is what appears on the screen for the participant to read.

Text in UPPER CASE, is either an interviewer instruction, or there to guide the interviewer. Where there is a showcard for the interviewer to use, this is written as an interviewer instruction. Each showcard has a unique reference number and the participant is asked to turn to that card to read the response options available (so that the interviewer does not need to read out a long list of items). Participants are given a pack of laminated cards that are in the correct order as they appear in the questionnaires.

#### 1.5 Textfills

Textfills are used to adapt the question wording (or response options) for an individual respondent, based on information they have given as the questionnaire proceeds, for example, by adding in the name of their baby and referring to them in the correct gender. In this example the textfills would be as follows: ^[cohort baby name] and ^[he/she].

In some cases, textfills are used to adapt or add to the wording at specific sweeps or under specific circumstances. For example, some questions on household income had a textfill ^[and your partner] but only if the respondent had a partner and the partner was resident in the same household. In these cases the wording of the textfill is shown and the programmers developing the CAPI and CASI were given additional information as to what was required.

#### 1.6 Responses

There a number of different response types and these are shown on the first line of the “Responses” column. Response types are as follows:

1. ‘Choice: multiple’ - the participant can choose multiple response options from a given list
2. ‘Choice: single’ – the participant can choose only one response option from a given list
3. ‘Open: XX’ – the participant has to type in the answer and XX denotes the maximum number of characters allowed
4. ‘Number: A, B, C..D’ – the participant has to enter a numeric answer. ‘A’ represents the number of decimal places allowed, ‘B’ is the maximum number of characters that can be entered, ‘C..D’ is the range (lower and upper values) permitted

5. 'Date: dd/mm/yyyy or mm/yyyy or yyyy' - the participant needs to enter a date either as a full date, or month and year only, or year only.
6. 'Control:' – this is used where a response is not required, for example there is some introductory text, followed by instructions to advance to the next screen.

The response type is then followed by the response options, if the response type is 'Choice: multiple' or 'Choice: single'.

The response options are shown as a table with a numbered list of items. The interviewers (CAPI) and respondents (CASI), are presented with the list but the numbers are not shown. These numbers do however, appear in the datasets. For questions without a showcard, interviewers read out all the options for participants to select their answer(s).

Within the SPSS Dimensions CAPI and CASI instruments, answers to questions with predefined response options are entered by selecting the relevant response(s). CASI sections are administered on touch screen tablets, so touching the relevant answer, selects it. Questions that allow multiple responses, include the wording: CODE ALL THAT APPLY (if CAPI) and "Please choose all that apply" (if CASI). If an incorrect answer is selected, it can be deselected and then the correct answer chosen. Some of the questions which allow multiple responses to be made, also have some responses which are exclusive, that is, they cannot be selected with any of the other responses. The CAPI and CASI instruments are programmed to take account of single and multiple response questions, exclusive responses and also combinations of answers which were not permitted, for example because they are contradictory. Questions with open text, require the answer to be typed in.

### 1.7 'Don't know' and 'Prefer not to answer'

'Don't know' and 'Prefer not to answer' options were allowed within both the CAPI and CASI as participation in Life Study was voluntary and it was important that participants did not feel pressurised to answer all questions, if they were not comfortable with doing so. Virtually all questions allowed a 'Prefer not to answer' response and some questions additionally allowed a 'Don't know' response but only if it was felt that a participant may genuinely not know the answer. In CAPI, 'Don't know' and 'Prefer not to answer' are shown on the screen for interviewers to select if necessary, whereas in CASI, these options only appear on the screen if the participant tries to move to the next question without answering the current question.

(Details regarding use of 'Don't know' and 'Prefer not to answer' responses for each question, are not shown within this document).

## 1.8 Checks

Soft and hard checks are built into the programming of the CAPI and CASI questionnaires. Soft checks ask interviewers or participants to review their answer as it exceeds an expected range. They are given the opportunity to change their answer or proceed if they feel their answer is correct. Hard checks are used where an answer given is not feasible or contradictory to information already provided. In this circumstance, the answer has to be changed before proceeding to the next question.

## 1.9 Universe and routing instructions

Universe statements are based on Boolean logic and contain information to indicate when that question has to be applied: respondent type (mother, partner, non-resident father), component of the study (Pregnancy or Birth), sweep (pregnancy visit, six month visit, 12 month visit) and the mode of interview (CAPI or CASI).

RespType = 1 indicates the question is asked of mothers

RespType = 2 indicates the question is asked of partners

RespType = 4 indicates the question is asked of non-resident fathers (B.C. only)

Sweep = 1 indicates the question is asked at the Pregnancy Component, pregnancy visit

Sweep = 2 indicates the question is asked at the Pregnancy Component, six month visit

Sweep = 3 indicates the question is asked at the Pregnancy Component, 12 month visit

Sweep = 4 indicates the question is asked at the Birth Component, six month visit

ModeType = 1 indicates the question is asked as CAPI

ModeType = 2 indicates the question is asked as CASI

For many variables, the Universe also includes additional conditioning based on responses to other variables. In some cases, a specific response leads to an additional question being asked and on other occasions a specific response may lead to a number of questions being omitted.

<> is used to mean is not equal to

'@ sweep x' indicates that information is fed forward from an earlier sweep

(?) is used where the universe statement could not be written fully, as the routing relied on interaction with information stored in a Participant Management System. In such instances, the text in the universe statement provides a written explanation of the routing that takes place.

This document has been prepared as a questionnaire for a particular respondent at a particular sweep of the pregnancy component. For those variables which appear in this document, re-occurrences of that variable for both mothers and partners across all three sweeps of the pregnancy component can be seen by looking at the universe statement.

However, please note that there are other Life Study variables which don't appear in this document and these will be found in the other Life Study questionnaires.

### 1.10 Multiple births

The Life Study questionnaires were designed to allow for singleton, twin and triplet cohort members. At the six month and twelve month sweeps, a number of questions relating to the baby are asked separately of each cohort member. If there are just one or two questions of this nature within a module, then the questions repeat for each baby, one after the other. If however, there are a series of questions which need to repeat for each baby, then the whole section is asked of the first baby and then repeated for the next baby. This allows the mother to answer related questions focussing on each baby separately.

### 1.11 Looped sections

Similarly, in some modules of the Life Study questionnaires, individual questions, or sequences of questions are repeated a number of times, based on information provided by the participant. For example, in the Demographics module, the respondent is asked a number of questions about each member of their household, based on the number of people they live with.

### 1.12 This document

This document now details the questionnaires used for mothers attending a twelve month visit, with their baby, in a Life Study Centre, within the Pregnancy Component of Life Study.

## 2. Computer Assisted Personal Interview (CAPI)

### 2.1 Demographics

Variable	Source	Question	Responses	Universe						
First name of cohort baby [BabyName]	Millennium Cohort Study (MCS) First Survey	^[Starting with / Now thinking about] your^[first-born / second-born] baby, what is his/her first name? 3	Just about getting by													
4	Finding it quite difficult													
5	Finding it very difficult													

## 5. Pre-complete Questionnaire

The 12 month pre-visit questionnaire is presented on the next pages. This was designed to be posted to participants before their 12 month visit to a Life Study Centre, to be completed in the home setting and brought with them to their visit. Spare copies would also have been available in the Life Study Centres.

The Ages and Stages Questionnaires (ASQ-3), 12 month questionnaire (which was designed for infants from 11 months 0 days through to 12 months and 30 days) has been omitted from this document because of copyright.

## **Your baby is learning new skills every day!**

Thank you for your contribution to Life Study. We would like you to answer some questions on what your baby is learning to do at 12 months old. Please complete the questions and bring it to your, and your baby's 12 month appointment at the Life Study Centre.

This <colour> <leaflet / booklet > asks you a little about your baby's eating, crying and sleeping behaviours.

The <colour> <leaflet / booklet > enclosed includes small tasks for you to do with your baby and will ask you questions on how your baby communicates with you and others, how they play with toys and about their movements. Before completing this you should make sure your baby is rested and fed. Try each activity with your child before marking a response.

Before you start you will need the following:

A small piece of food, such as bread

A short piece of string

A small easy-to-grip toy

Answering the questions:

Tick "Yes" if your child is performing the skill.

Tick "Sometimes" if your child is just beginning to perform the behaviour or performs the skill on occasion, but not all the time.

Tick "Not yet" if your child is not yet performing the behaviour.

These tasks and questions should be fun to do. If you have any questions or concerns please contact your health visitor or GP who will be able to talk to you about these.

**Thank you for your continued support of Life Study.**

**The following instructions apply for Q1, Q2 and Q3 only.**

As you read each description of your baby’s behaviour below, please indicate how often your baby did this during the LAST WEEK (the past seven days) by ticking one of the boxes. These boxes indicate how often you observed the behaviour described during the last week.

The “Does Not Apply” column is used when you did not see your baby in the situation described during the last week. For example, if the situation mentions your baby having to wait for food or liquids and there was no time during the last week when your baby had to wait, tick the “Does Not Apply” column. “Does Not Apply” is different from “Never”. “Never” is used when you saw your baby in the situation but your baby never engaged in the behaviour listed during the last week. For example, if your baby did have to wait for food or liquids at least once but never cried loudly while waiting, tick the “Never” column.

Please tick (only **one**) for every item.

**Q1. How often did the baby.....**

	Never	Very Rarely	Less Than Half the Time	About Half the Time	More Than Half the Time	Almost Always	Always	Does Not Apply
a) Seem angry (crying and fussing) when you left her/him in the crib?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5	6	7	8
b) Seem contented when left in the crib?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5	6	7	8
c) Cry or fuss when going to sleep for naps?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5	6	7	8
d) Protest being placed in a confining place (infant seat, play pen, car seat etc.)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5	6	7	8

**Q2. When your baby wanted something, how often did s/he...**

Please tick (only **one**) for every item.

	Never	Very Rarely	Less Than Half the Time	About Half the Time	More Than Half the Time	Almost Always	Always	Does Not Apply
a) Become upset when s/he could not get what s/he wanted?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5	6	7	8
b) Have tantrums (crying, screaming, face red etc) when s/he did not get what s/he wanted?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5	6	7	8

**Q3. After sleeping how often did your baby...**

Please tick (only one) for every item.

	Never	Very Rarely	Less Than Half the Time	About Half the Time	More Than Half the Time	Almost Always	Always	Does Not Apply
a) Cry if someone didn't come within a few minutes?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3	4	5	6	7	8

**Q4. Below is a list of things that babies learn to do as they get older. Some of them your baby will already be doing and some others s/he won't have started yet. Please tick how often your baby has done each of these things. Please tick (only one)**

	Not yet	Sometimes	Often
a) Has angry moods	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3
b) Hits out at you or other people	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3
c) Bites you or other people	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3
d) Has temper tantrums	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
	1	2	3

**Q5. Please fill out the following about how your child usually is. If the behaviour is rare (e.g. you've seen it once or twice), please answer as if the child does not do it. Please tick the box that is most appropriate to your child. Please tick (only one)**

	Yes	No
a) Does your child ever use his/her index finger to point, to ask for something?	<input type="checkbox"/>	<input type="checkbox"/>
	1	2
b) Does your child ever use his/her index finger to point, to indicate interest in something?	<input type="checkbox"/>	<input type="checkbox"/>
	1	2
c) Does your child ever bring objects over to you to show you something?	<input type="checkbox"/>	<input type="checkbox"/>
	1	2

**Q6. Where does your baby usually sleep? Please tick (only one)**

Infant basket or cot in a separate room

1

Infant basket or cot in parents' room

2

In parents' bed

3

Infant basket or cot in room with sibling

4

Other, specify:

5

**Q7. In what position does your baby sleep most of the time? Please tick (only one)**

On his/her tummy

1

On his/her side

2

On his/her back

3

**Q8. How much time does your baby spend in sleep**

a) During the NIGHT (between 7 in the evening and 7 in the morning)

 

Hours

 

Minutes

b) During the DAY (between 7 in the morning and 7 in the evening).

 

Hours

 

Minutes

**Q9. On average how many times does your baby wake each night?**

 

Times

Next I am going to ask you about the time you currently spend doing different types of physical activity in a typical week. Please answer these questions even if you do not consider yourself to be a physically active person.

Think first about the time you spend doing work. Think of work as the things that you have to do such as paid or unpaid work, study/training, household chores, and childcare. In answering the following questions 'vigorous-intensity activities' are activities that require hard physical effort and cause large increases in breathing or heart rate, 'moderate-intensity activities' are activities that require moderate physical effort and cause small increases in breathing or heart rate.

**Q18. Does your work involve vigorous-intensity activity that causes large increases in breathing or heart rate like carrying or lifting heavy loads, digging or construction work, for at least 10 minutes continuously?**

Yes	No
<input type="checkbox"/>	<input type="checkbox"/>
1	2
→ Q19	→ Q21

**Q19. In a typical week, on how many days do you do vigorous-intensity activities as part of your work?**

Days

**Q20. How much time do you spend doing vigorous-intensity activities at work on a typical day?**

Hours                  Minutes

**Q21. Does your work involve moderate-intensity activity that causes small increases in breathing or heart rate, such as brisk walking or carrying light loads, for at least 10 minutes continuously?**

Yes	No
<input type="checkbox"/>	<input type="checkbox"/>
1	2
→ Q22	→ Q24

**Q22. In a typical week, on how many days do you do moderate-intensity activities as part of your work?**

Days

**Q23. How much time do you spend doing moderate-intensity activities at work on a typical day?**

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------

Hours                  Minutes

The next questions exclude the physical activities at work that you have already mentioned.

Now I would like to ask you about the usual way you travel to and from places. For example to work, for shopping, to market, to a child carer or school.

**Q24. Do you walk or use a bicycle (pedal cycle) for at least 10 minutes continuously to get to and from places?**

Yes	No
<input type="checkbox"/>	<input type="checkbox"/>
1	2
→ Q25	→ Q27

**Q25. In a typical week, on how many days do you walk or bicycle for at least 10 minutes continuously to get to and from places?**

Days

**Q26. How much time do you spend walking or bicycling for travel on a typical day?**

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------

Hours                  Minutes

The next questions exclude the work and transport activities that you have already mentioned.

Now I would like to ask you about sports, fitness and recreational (leisure) activities.

**Q27. Do you do any vigorous-intensity sports, fitness or recreational (leisure) activities that cause large increases in breathing or heart rate like running or football, for at least 10 minutes continuously?**

Yes	No
<input type="checkbox"/>	<input type="checkbox"/>
1	2
→ Q28	→ Q30

**Q28. In a typical week, on how many days do you do vigorous-intensity sports, fitness or recreational (leisure) activities?**

Days

**Q29. How much time do you spend doing vigorous-intensity sports, fitness or recreational activities on a typical day?**

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------

Hours                      Minutes

**Q30. Do you do any moderate-intensity sports, fitness or recreational (leisure) activities that causes a small increase in breathing or heart rate such as brisk walking, cycling, swimming, volleyball, for at least 10 minutes continuously?**

Yes	No
<input type="checkbox"/>	<input type="checkbox"/>
1	2
→ Q31	→ Q33

**Q31. In a typical week, on how many days do you do moderate-intensity sports, fitness or recreational (leisure) activities?**

<input type="text"/>
----------------------

 Days

**Q32. How much time do you spend doing moderate-intensity sports, fitness or recreational activities on a typical day?**

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------

Hours                      Minutes

I would now like to ask you about the time you spend sitting or reclining at work, at home, getting to and from places, or with friends including time spent sitting at a desk, sitting with friends, travelling in car, bus, train, reading, playing cards or watching television, but not including time spent sleeping.

**Q33. How much time do you usually spend sitting or reclining on a typical day?**

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------

Hours                      Minutes

**Please now complete the ASQ questionnaire.**
