Samantha Ahern Steve Rowett – Digital Education, UCL

UCL

Current project(s) - Explore the potential for using learning analytics at UCL

• What datasets are you using?

 • Hoping to obtain Moodle log data

• How are you using them?

 • Investigate what information / patterns can be derived from the data that may help support students

• What is the impact on your organisation?

 • At present none, currently only preliminary investigatory work

• What are the issues and challenges for you?

 • Understanding what we want to achieve

 • Current data management practices

 • Obtaining buy-in

 • No attendance monitoring at present

Ideas for future research and collaboration possibilities

• What datasets would you like to use and why?

• Library access & loans - develop a richer picture of student study patterns

• Attendance - develop a richer picture of student study patterns

• Lecture capture - develop a richer picture of student study patterns

• SITS – can we associate study patterns with outcomes?

• Lynda.com - develop a richer picture of student study patterns

• What questions would you like to be able to answer?

 • Can we identify students who are trying too hard?

 • Has anything changed in the students' behaviour?

 • Can we identify potential issues?

• What do you see as collaboration opportunities?

 • Not sure

• What would help you?

• Discussing approaches with other institutions that are not focused on retention for their learning analytics
