

Likerts, Ordinals and Quantifying Engagement

Samantha Ahern

October 2016

72%

of companies where
the security policy was
poorly understood had
staff related breaches.

Information security incidents and staff awareness

- Online training available for staff and students
- Unable to differentiate between staff related breaches and other incidents

A large black circle containing the text '28%' in white, bold font.

of the worst security breaches were caused partly by senior management giving insufficient priority on security.

▲ Up from 7% a year ago.

Questions:

- How much priority do Senior Management give to information security?
- Is the level of priority related to the number of information security incidents reported?

What could I have done?

- How much priority do Senior Management give to information security?
- Is the level of priority related to the number of information security incidents reported?
