

Introduction

The nurse introduces the decision aid

The nurse introduces the aim of treatment and the two treatment options:

- best supportive care
- best supportive care plus second-line chemotherapy

The nurse gives a non-health related example of the presentation of risk information

Information

Adverse events

- 1) The nurse explains the implications of a severe adverse event (e.g. hospital admission), and explains the selection of adverse events that has been made
- 2) The nurse asks the patient whether the information on severe adverse events is desired
- 3) If desired, the nurse provides the information

Tumour response

- 1) The nurse explains the different ways in which the tumor can respond to treatment, including the temporary nature of this response
- 2) The nurse asks the patient whether the information on tumor response is desired
- 3) If desired, the nurse provides the information

Survival

- 1) The nurse explains the concept of median survival, and emphasizes that it is not possible to predict an individual patient's survival
- 2) The nurse asks the patient whether the information on expected survival is desired
- 3) If desired, the nurse provides the information

Wrap-up

The nurse explains that the information can be used to make a treatment choice

The nurse gives the patient a brochure with the information the patient desired
