

Table 3. The rate of visual acuity change during the 12 months by baseline VA level.

	<b>Mean VA change rate (LogMAR/year) (95% CI)</b>	<b>Difference in change rate compared to reference group (95% CI)</b>	<b>p-value</b>
<b>Baseline VA *</b>			<b>&lt;.001**</b>
No VI	0.056 (-0.010, 0.120)	ref	
Mild VI	0.047 (0.017, 0.077)	-0.008 (-0.080, 0.063))	0.82
Moderate VI	0.015 (-0.002, 0.032)	-0.040 (-0.108, 0.027)	0.24
SevereVI	-0.045 (-0.070, -0.020)	-0.101 (-0.170, -0.031)	0.005

\*: No VI: VA better or equal to 20/25; Mild VI: VA worse than 20/25 to 20/70; Moderate VI: VA worse than 20/70 to 20/200; Severe VI/Blindness: VA worse than 20/200.

\*\* : this p-value is testing whether there was any difference in rate of VA change by baseline VA level.
