

Aesthetic outcome after breast conserving surgery and either intraoperative radiotherapy or whole breast external beam radiotherapy for early breast cancer: Objective assessment of patients in a randomized controlled trial in Lublin, Poland.

Figures

Figure 1. Outline of patient selection.

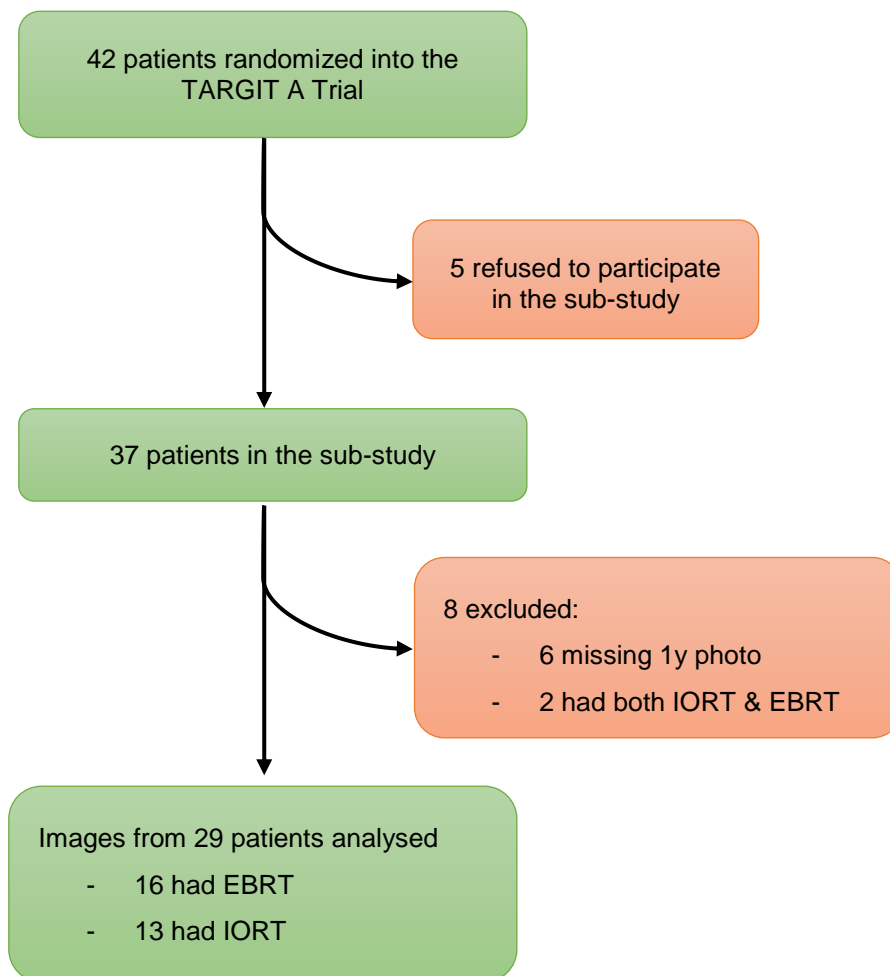

Figure 2. Differences at one year in measures of colour by treatment received.

The three coordinates of the CIE L*a*b* color space represent: L*, from black (low) to white (high); a*, from green (low) to magenta (high); and b*, from blue (low) and yellow (high). These results are consistent with an increase in "redness" after EBRT when compared with IORT. See [11] for more details.
